

# BIRLA INSTITUTE OF TECHNOLOGY

## CHOICE BASED CREDIT SYSTEM (CBCS) CURRICULUM

*(Effective from Academic Session: Monsoon 2018)*

**NAME OF THE PROGRAMME**

**B.TECH. (CHEMICAL ENGINEERING –PLASTIC AND POLYMER)**

**NAME OF THE DEPARTMENT**

**CHEMICAL ENGINEERING**

## **Institute Vision**

To become a Globally Recognised Academic Institution in consonance with the social, economic and ecological environment, striving continuously for excellence in education, research, and technological service to the National needs.

## **Institute Mission**

- To educate students at Undergraduate, Postgraduate, Doctoral, and Post-Doctoral levels to perform challenging engineering and managerial jobs in industry.
- To provide excellent research and development facilities to take up Ph.D. programmes and research projects.
- To develop effective teaching learning skills and state of art research potential of the faculty.
- To build national capabilities in technology, education, and research in emerging areas.
- To provide excellent technological services to satisfy the requirements of the industry and overall academic needs of society.

**Department Vision:**

To be a center of excellence for the provision of effective teaching/learning, skill development and research in the areas of chemical engineering and allied areas through the application of chemical engineering principles.

**Department Mission**

- 1) To educate and prepare graduate engineers with critical thinking skills in the areas of chemical engineering & polymer science and engineering, who will be the leaders in industry, academia and administrative services both at national and international levels.
- 2) To inculcate a fundamental knowledge base in undergraduate students which enable them to carry out post-graduate study, do innovative interdisciplinary doctoral research and to be engaged in long-life learning.
- 3) To train students in addressing the challenges in chemical, petrochemical, polymer and allied industries by developing sustainable and eco-friendly technologies.

## **Graduate Attributes**

- 1. Engineering Knowledge:** Apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
- 2. Problem Analysis:** Identify, formulate, research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- 3. Design/ Development of Solutions:** Design solutions for complex engineering problems and design system components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations.
- 4. Conduct investigations of complex problems** using research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of information to provide valid conclusions.
- 5. Modern Tool Usage:** Create, select and apply appropriate techniques, resources and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- 6. The Engineer and Society:** Apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice.
- 7. Environment and Sustainability:** Understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of and need for sustainable development.
- 8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.
- 9. Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams and in multi-disciplinary settings.
- 10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to

comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions.

**11. Project Management and Finance:** Demonstrate knowledge and understanding of engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**12. Life-long Learning:** Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

### **Programme Educational Objectives (PEOs)**

1. To understand and apply working knowledge of chemical engineering principles in independent research and development.
2. To implement the inter-perceptual skills of individuals in technical profession.
3. To prepare students for the employment in such industries as chemical, petroleum, and allied chemical industries.
4. To update technical know-how by self-learning besides learning a great deal by associating with professional bodies and alumni.
5. To develop an ability to succeed in the graduate competitive examinations and pursue higher studies in chemical engineering or lateral disciplines.

### **(A)Programme Outcomes (POs)**

Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and teamwork:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

**(B) Programme Specific Outcomes (PSOs)**

1. To develop students' understanding of the core scientific, mathematical and engineering principles conceive and design processes to produce, transform and transport materials (chemical products) - beginning with experimentation in the laboratory and followed by implementation of technologies in full-scale production.
2. To prepare students for professional work in development, design, modelling, simulation, optimization and operation of chemical products and processes.
3. To prepare students with high scholastic attainment to enter graduate programs leading to advanced degrees in chemical engineering or in related professional, scientific, and engineering fields.

## BLOOM'S TAXONOMY FOR CURRICULUM DESIGN AND ASSESSMENT:

### *Preamble*

The design of curriculum and assessment is based on Bloom's Taxonomy. A comprehensive guideline for using Bloom's Taxonomy is given below for reference.

## SYLLABUS (ALL SEMESTERS)

### COURSE INFORMATION SHEET

<b>Course code</b>	CL201
<b>Course title</b>	Thermodynamics
<b>Pre-requisite(s)</b>	
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: 3 T: 1 P: 0
<b>Class schedule per week</b>	4
<b>Class</b>	B. Tech.
<b>Semester / Level</b>	III / Second
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

#### **Course Objectives**

This course enables the students to:

1.	Apply the concept of thermodynamics to solve physical and chemical problems encountered in chemical and biochemical industries.
2.	Apply knowledge of thermodynamics principles in heat transfer, mass transfer and chemical reaction engineering.
3.	Analyze and interpret data, to identify, formulate, and solve engineering problems.
4.	Solve real world engineering problems using thermodynamic principles.
5.	Apply the knowledge of thermodynamics to design chemical engineering equipments.

#### **Course Outcomes**

After the completion of this course, students will be able to:

CO201.1	Apply the laws of thermodynamics on closed and open systems.
CO201.2	Evaluate the properties of real gases.
CO201.3	Solve problems involving various thermodynamic cycles.
CO201.4	Evaluate the thermodynamic properties (Such as Partial molar properties, Fugacity coefficients, activity coefficients) of pure fluid and mixtures.
CO201.5	Predict equilibrium composition of mixtures under phase and chemical-reaction equilibria.

#### **SYLLABUS**

<b>MODULE</b>	<b>NO. OF LECTURE HOURS</b>
<b>Module 1: Introduction and Basic Concepts</b> First law of thermodynamics, Energy balance for closed systems, Mass and Energy balances for open systems, Volumetric properties of pure fluids, Virial	8

equations of state, Cubic equations of state, Theorem of corresponding states, Acentric factor, generalized correlations for gases and liquids, Statements of the second law, Heat engines, Carnot cycle, Refrigerator and Heat pump, Third law of thermodynamics, Microscopic interpretation of entropy.	
<b>Module 2: Thermodynamic Relations and Thermodynamic Properties of Fluids</b> Euler relation, Gibbs-Duhem relation, Legendre transformation, Helmholtz free energy, Gibbs free energy, Maxwell relations, Gibbs energy as a generating function, Joule-Kelvin Effect, Bridgman table, Clausius/Clapeyron equation, Antoine equation, Residual properties, Thermodynamic properties of real gases using tables and diagrams: Edmister chart, Lee-Kesler data.	8
<b>Module 3: Vapor-Liquid Equilibrium in Mixtures</b> Introduction to Vapor-Liquid Equilibrium, Vapor-Liquid Equilibrium in ideal mixtures, Dew point and bubble point temperatures/Pressures, VLE from K-value correlations (Flash calculations), Low-Pressure Vapor-Liquid equilibrium in non-ideal mixtures, EOS, SRK.	8
<b>Module 4: Thermodynamics of Multicomponent Mixtures</b> Fundamental Property Relation, The Chemical Potential and Phase Equilibria, Partial Properties, The Ideal-Gas Mixture Model, Fugacity and Fugacity Coefficient (Pure Species and Species in Solution), The Ideal-Solution Model, Excess Properties, The Excess Gibbs Energy and the Activity Coefficient, Models for the Excess Gibbs Energy (Margules equation, Redlich-Kister equation, van Laar equation, Wilson equation, NRTL model and UNIQUAC equation) SRK, PR.	8
<b>Module 5: Chemical Reaction Equilibria</b> The reaction coordinate, Application of Equilibrium Criteria to Chemical Reactions, The standard Gibbs Energy Change and the Equilibrium Constant, Effect of Temperature on the Equilibrium Constant, Evaluation of Equilibrium Constants, Relation of equilibrium constants to composition, Equilibrium Conversions for single Reactions, Phase Rule and Duhem's Theorem for Reacting Systems, Multi-reaction equilibria.	8

**Text books:**

1. Introduction to Chemical Engineering Thermodynamics: J.M. Smith, H.C. Van ness, and M.M. Abbot. 7<sup>th</sup> Edition, McGraw-Hill's Chemical Engineering Series.
2. Chemical, Biochemical and Engineering Thermodynamics: Stanley I. Sandler. Fourth Edition, John Wiley & Sons, Inc.
3. Chemical Engineering Thermodynamics: Y V C Rao, University Press.

**Reference books:**

1. Molecular Thermodynamics of Fluid-Phase Equilibria: J.M. Prausnitz, R.N. Lichtenthaler, E G de Azevedo. 3<sup>rd</sup> Edition, Prentice Hall International Series in the Physical and Chemical Engineering Sciences.
2. Engineering and Chemical Thermodynamics: Milo D. Koretsky. 2<sup>nd</sup> Edition, John Wiley & Sons, Inc.

3. Using Aspen Plus in Thermodynamics Instruction: Stanley I. Sandler, John Wiley & Sons, Inc.

**Gaps in the syllabus (to meet Industry/Profession requirements)**

Use of process simulator such as ASPEN to study phase equilibria/reaction equilibria.

**POs met through Gaps in the Syllabus**

PO3, PO4, PO5

**Topics beyond syllabus/Advanced topics/Design**

Introduction to molecular/statistical thermodynamics.

**POs met through Topics beyond syllabus/Advanced topics/Design**

PO3, PO4, PO5

**Course Outcome (CO) Attainment Assessment tools & Evaluation procedure**

**Direct Assessment**

Assessment Tool	% Contribution during CO Assessment
First Quiz	10
Mid Semester Examination	25
Second Quiz	10
Teacher's Assessment	5
End Semester Examination	50

**Indirect Assessment –**

1. Student Feedback on Course Outcome

**Mapping of Course Outcomes onto Program Outcomes**

Course Outcome	Program Outcomes (POs)												Program Specific Outcomes (PSOs)

## COURSE INFORMATION SHEET

<b>Course code</b>	CL203
<b>Course title</b>	Fluid Mechanics
<b>Pre-requisite(s)</b>	
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: 3    T: 0    P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. Tech
<b>Semester / Level</b>	III / Second
<b>Branch</b>	Chemical

### Course Objectives

This course enables the students to:

1.	Develop an appreciation for the properties of Newtonian fluids.
2.	Understand the working principle of pressure measuring and flow measuring devices.
3.	Apply concepts of mass and momentum conservation to fluid flows and analytically solve a variety of simplified problems.
4.	Understand the dynamics of fluid flows and the governing non-dimensional parameters.
5.	Understand the working principle of fluid moving machines.

### Course Outcomes

After the completion of this course, students will be able to:

CO203.1	Describe fluid pressure, its measurement and calculate forces on submerged bodies.
CO203.2	Explain the flow visualization, boundary layer and momentum correction factor, state the Newton's law of viscosity and Reynolds number. Analyze fluid flow problems with the application of the continuity and momentum equation.
CO203.3	Examine energy losses in pipe transitions and evaluate pressure drop in pipe flow using Hagen-Poiseuille's equation and Bernoulli's principle for laminar flow.
CO203.4	Explain the basics of drag, lift, streamlining, equivalent diameter, sphericity, determine minimum fluidization velocity in fluidized bed and Compute pressure drop in fixed bed, packed bed and fluidized system.
CO203.5	Analyze the general equation for internal flow meters and determine the performance aspects of fluid machinery.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<p><b>Module 1:</b> Fluid Statics: Basic equation of fluid statics; pressure variation in a static field; pressure measuring devices–manometer, U-tube, inclined tube, well, diaphragm, hydraulic systems – force on submerged bodies (straight, inclined), pressure centre.</p>	8
<p><b>Module 2:</b> Fluid flow phenomena: Fluid as a continuum, Terminologies of fluid flow, velocity – local, average, maximum, flow rate – mass, volumetric, velocity field; dimensionality of flow; flow visualization – streamline, path line, streak line, stress field; viscosity; Newtonian fluid; Non-Newtonian fluid; Reynolds number-its significance, laminar, transition and turbulent flows: Prandtl boundary layer, compressible and incompressible. Momentum equation for integral control volume, momentum correction factor.</p>	8
<p><b>Module 3:</b> Internal incompressible viscous flow: Introduction; flow of incompressible fluid in circular pipe; laminar flow for Newtonian fluid; Hagen-Poiseuille equation; flow of Non-Newtonian fluid, introduction to turbulent flow in a pipe; energy consideration in pipe flow, relation between average and maximum velocity, Bernoulli's equation–kinetic energy correction factor; head loss; friction factor; major and minor losses, Pipe fittings and valves.</p>	8
<p><b>Module 4:</b> Flow past of immersed bodies: Introduction; concept of drag and lift; variation of drag coefficient with Reynolds number; streamlining; packed bed; concept of equivalent diameter and sphericity; Ergun equation, Fluidization: Introduction; different types of fluidization; fluidized bed assembly; governing equation; industrial use. Agitation and mixing of liquids: agitated vessel, blending &amp; mixing, suspension of solid particles. Dispersion operation. Turbine Design/scale up, Flow number, Power Requirement.</p>	8
<p><b>Module 5:</b> Flow measurement: Introduction; general equation for internal flow meters; Orifice meter; Venturimeter; concept of area meters: rotameter; Local velocity measurement: Pitot tube. Fluid moving machines: Introduction; Basic classification of pumps, Mechanical pump: Centrifugal and Positive displacement</p>	8

pumps (rotary, piston, plunger, diaphragm pumps); pump specification; basic characteristics curves for centrifugal pumps; fan, blower and compressor.

## COURSE INFORMATION SHEET

**Course code:** CL204  
**Course title:** Chemical Process Calculations  
**Pre-requisite(s):**  
**Co-requisite(s):**  
**Credits:** L: 2 T: 1 P: 0  
**Class schedule per week:** 3 hrs  
**Class:** B. Tech.  
**Semester / Level:** III / Second  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives

This course enables the students to:

1.	Understand the fundamental concepts and calculations of process calculation.
2.	Use basic, applied chemistry/ thermodynamics for material balance calculations for different unit operations and unit processes.
3.	Use basic, applied chemistry/ thermodynamics for energy balance calculations for different unit operations and unit processes.
4.	Understand the various heats and their calculations related to chemical reactions.
5.	Develop understanding about humidity and usage of psychrometric chart.

### Course Outcomes

After the completion of this course, students will be able to:

CO204.1	Apply the concept of dimension and unit conversion to check dimensional consistency of balanced equation and understand the specific terms used in process calculation.
CO204.2	Solve problems related to ideal and real gas and solution.
CO204.3	Solve material balance problems without chemical reactions.
CO204.4	Solve material balance problems with chemical reactions.
CO204.5	Solve energy balance problems of various unit processes.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module I: Introduction to Stoichiometry:</b> Units and Dimensions: Conversion of Equations, Systems of Units, Dimensional	8

Homogeneity and Dimensionless Quantities, Buckingham Pi-theorem for Dimensional Analysis, Introduction to Chemical Engineering Calculations: Basis, Mole Fraction and Mole Percent, Mass Fraction and Mass Percent, Concentration of different forms, Conversion from one form to another, Stoichiometric and composition relations, Excess & Limiting reactants, Degree of completion, Conversion, Selectivity and Yield.	
<b>Module II: Gas Calculations, Humidity &amp; Saturation:</b> Gas laws-Ideal gas law, Dalton's Law, Amagat's Law, and Average molecular weight of gaseous mixtures. Vapour pressure, partial pressure, Vapour pressures of miscible, immiscible liquids and solutions. Real-gas relationships, Raoult's Law, Henry's law, Antoine's Equation, Clausius Clapeyron Equation. PVT calculations using ideal and real gas relationships, Relative Humidity and percent saturation; Dew point, Dry and Wet bulb temperatures; Use of humidity charts for engineering calculations.	8
<b>Module III: Material Balance without Chemical Reaction:</b> Unit Operations & Process Variables, Degree of Freedom Analysis, Application of material balances to single and multiple unit operations without chemical reactions involving distillation column, absorption column, evaporators, driers, crystallizer, liquid-liquid and liquid-solid extraction units, Unsteady state material balances.	8
<b>Module IV: Material Balance with Chemical Reaction:</b> Material balances with Single Reaction & Multiple Reactions applicable to single and multiple unit operations, Recycle, purge, bypass in batch, stage wise and continuous operations in systems with or without chemical reaction. Material balances in combustion, gas-synthesis, acid-alkali production reactions.	8
<b>Module V: Energy Balance:</b> Heat capacity of solids, liquids, gases and solutions, use of mean heat capacity in heat calculations, problems involving sensible and latent heats, Evaluation of enthalpy, Standard heat of reaction, heat of formation, combustion, solution mixing etc., Calculation of standard heat of reaction, Hess Law, Energy balance for systems with and without chemical reaction, Unsteady state energy balances.	8

## COURSE INFORMATION SHEET

<b>Course code</b>	CL 205
<b>Course title</b>	Mechanical Operations
<b>Pre-requisite(s)</b>	
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: 3    T: 0    P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. Tech.
<b>Semester / Level</b>	III / Second
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

### Course Objectives

This course enables the students to:

1.	Develop an understanding of basics of mechanical operations.
2.	Understand storage and transportation of solids.
3.	Understand size analysis, size reduction and working principle of associated equipment used for size reduction.
4.	Understand solid-liquid and liquid-liquid mechanical separation.
5.	Understand gas-solid and solid-solid mechanical separation.

### Course Outcomes

After the completion of this course, students will be able to:

CO 205.1	Remembering the fundamental laws of particulate separation and basic mathematical formulae.
CO 205.1	Understanding the need of mechanical operations in chemical engineering industries.
CO 205.1	Analysis of size reduction machineries for various industries and solid-fluid separation units .
CO 205.1	Concept of size reduction machineries for various industries, solid-fluid separation units.
CO 205.1	Compare among different mechanical separation units for solid-fluid separation.

### SYLLABUS:

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> <b>Characterization of solid particles:</b> Particle Shape. Particle size analysis Differential and cumulative analysis. <b>Properties of particulate masses:</b> Bulk density, coefficient of Internal Friction, Storage of solids, Pressure distribution in	8

hopper. Janssen Equation. <b>Transportation of Solids:</b> Studies on performance and operation of different conveyors eg. Belt, Screw, Apron, Flight etc. and elevators.	
<b>Module 2:</b> Size Reduction: Rittinger's law, Kick's law, Bond's law, Work index, Types of comminuting equipment - Jaw Crushers, Gyratory Crusher, Roll crushers; Grinders-hammer Mill, Ball Mill, Rod Mill etc. Dry and wet grinding, open and closed circuit. Simulation of Milling operation grinding rate function, breakage function.	8
<b>Module 3: Solid Liquid separation : Gravity Settling process</b> – Clarifiers and Thickeners, Flocculation Design of Gravity Thickener,. <b>Centrifugal Settling:</b> principle, Centrifuges for solid liquid and liquid-liquid separation.	8
<b>Module 4:Filtration:</b> Theory of solid-liquid filtration, principle of filtration, constant pressure and constant rate filtration, compressible and incompressible cakes, Filter aids, Equipment of liquid solid filtration, Batch and continuous pressure filters. Theory of centrifugal filtration, Equipment for centrifugal filtration.	8
<b>Module 5:Solid Solid Separation :</b> Industrial Screening equipment :Screen effectiveness and Capacity. <b>Wet Classification:</b> Differential settling, Liquid cyclones,Drag, Rake and Spiral, Bowl, Hydroseparator, Hydraulic classifiers, Tabling, Jigging, Froth floatation, Dense media separation etc. <b>Magnetic separation, Electrostatic Separation. Gas-solid separation:</b> Settling chambers, centrifugal settling, Cyclones, ESP, Scrubbers, Filters.	8

## COURSE INFORMATION SHEET

<b>Course code</b>	<b>CL 213</b>
<b>Course title</b>	<b>Macromolecular Science</b>
<b>Pre-requisite(s)</b>	<b>PH113,CH101,CH102</b>
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. Tech.
<b>Semester / Level</b>	III / Second
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

### **Course Objectives**

This course enables the students to:

1.	Define chemical structure of polymer, classification and isomerism
2.	Describe the different molecular weight measurement techniques
3.	Illustrate the method and kinetics of polymerization
4.	Distinguish the types of polymerization techniques to manufacture polymers for specific use
5.	Compare the properties of copolymers with that of homopolymers in respect of monomer ratios

### **Course Outcomes**

After the completion of this course, students will be able to:

CO213.1	Remembering: Show chemical structure of polymers, tell correlation between structure and properties, recall polymerization steps
CO213.2	Understanding: Outline Polymerization processes and compare different steps of synthesis by various mechanisms, interpret polymer solubility in terms of thermodynamics
CO213.3	Analyze: Given a set of polymers assess their suitability for specific use and application on the basis of chemical structure, solubility, degree of crystallinity
CO213.4	Evaluate: Given a specific set of requirements of polymer application recommend and select the most cost effective polymerization technique for production
CO213.5	Apply: Given a polymer, suggest the method of finding out molecular weight distribution, average molecular weight, degree of crystallinity

## SYLLABUS

MODULE	(NO. OF LECTURE HOURS)
<b>Module 1: Introduction to macromolecule concept</b> Classification of polymer. Polymer structure property relationship, Molecular forces and chemical bonding in polymer. Glassy to rubber transition in polymer. Molecular weight and Molecular weight distribution. Molecular weight determination by colligative properties, Ultracentrifuge, Light scattering, Solution viscometry, Gel permeation chromatography.	10
<b>Module 2:Condensation Polymerization</b> Principles of Step-reaction (condensation) polymerization. Mechanism of stepwise polymerization. Kinetics and statistics of linear stepwise polymerization. Polyfunctional step-reaction polymerization, Real Industrial processes.	5
<b>Module 3: Addition Polymerization</b> Principles of radical chain (addition) polymerization. Initiators and initiator systems. Kinetics of vinyl radical polymerization. Kinetics of copolymerization. Composition of copolymers. Mechanism of Copolymerization Mechanism and kinetics of ionic chain growth polymerization. Mechanism and kinetics of co-ordination polymerization. Mechanism and kinetics of ring opening polymerization. ATRP, Electrochemical Polymerization.	10
<b>Module 4: Polymer Solutions</b> Criteria for polymer solubility. Conformations of dissolved polymer chains. Thermodynamics of Polymer solutions. Phase equilibrium in polymer solutions. Fractionation of polymers by solubility. Polymerization techniques: Bulk, Suspension, Emulsion, Solution polymerization.	7
<b>Module 5: Morphology of Polymers</b> Crystal structure of polymer. Morphology of crystalline polymer. Crystallization and melting. Strain induced morphology. Mechanical properties of crystalline polymer. Viscous flow. Kinetic theory of rubber elasticity. Viscoelasticity.	8

**Text Books:** 1. Text book of polymer Science: Billimeyer F.W., 3rd Edn., Wiley Interscience, 1984

<b>Course code</b>	CL207
<b>Course title</b>	Process Technology and Economics - I
<b>Pre-requisite(s)</b>	Thermodynamics CL201, Chemical Process Calculations CL204
<b>Co- requisite(s)</b>	Mass Transfer Operation CL 209, Heat Transfer Operation CL208.
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. Tech.
<b>Semester / Level</b>	IV / Second
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

### Course Objectives

This course enables the students to:

1.	Understand the processes involved in chemical industries for the production of chemicals.
2.	Illustrate the different unit operations and unit processes in a given process flow diagram.
3.	Identify and solve engineering problems during production.
4.	Explain the effect of various process parameters on manufacturing processes.
5.	Understand economic principles as applied in Chemical Engineering.

### Course Outcomes

After the completion of this course, students will be able to:

CO207.1	Describe manufacturing processes involved in sulphur and allied industries.
CO207.2	Explain manufacturing processes involved in chlor-alkali and Pulp & Paper industries.
CO207.3	Explain manufacturing processes involved in Fertilizer Industries.
CO207.4	Estimate and explain various financial terms.
CO207.5	Evaluate and analyse the concept of depreciation and profitability measure.

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Sulfuric acid: Properties of sulfuric acid, Hydrates of sulfuric acid, Usage, Contact process, Catalysts, Contact process equipment's, Materials of construction, DCDA process. Phosphorous Industries: Phosphate rock, Superphosphates, Manufacturing of Phosphoric acid (Wet-Process and	8

Electric-Furnace), Phosphates (Sodium phosphates, Pyrophosphates, Calcium Phosphates), manufacturing of diammonium phosphate.	
<b>Module 2:</b> Chlor-alkali industries: Manufacture of Soda Ash, Caustic Soda and Chlorine. Bleaching Powder, Calcium Hypochlorite, Sodium Hypochlorite. Manufacture of chlorine caustic soda, Mercury cathode and membrane process, hydrochloric acid. Pulp and Paper Industries: Manufacture of pulp (Kraft pulping and Sulfite pulping), Manufacture of paper.	8
<b>Module 3:</b> Nitrogen industries: Manufacturing of Ammonia; ammonium nitrate, ammonium sulphate; Manufacturing of Urea and Nitric acid. Fertilizer Industries: Manufacturing of Single Superphosphate (SSP), Triple Superphosphate (TSP) and ammonium phosphate. Mixed fertilizers: NPK – Manufacturing process and details of major equipments.	8
<b>Module 4:</b> Process design development, preliminary design concepts, flowsheet development. Cost estimation of investment and production. Break-even analysis. Interest and Investment costs: Simple interest, Compound interest, Nominal and Effective interest rates, Continuous interest, Annuities.	8
<b>Module 5:</b> Profitability measures: Rate of return on investment, Present worth and discounted cash flow, Payback period, Capitalized Costs. Depreciation: Types of depreciation, Salvage Value, Present Value, Book Value, Market Value, Replacement Value. Methods for determining depreciation: Straight line method, Declining-balance or Fixed percentage method, Sum-of-the-years-digits method, Sinking-fund Method, Accelerated cost recovery system, Modified accelerated cost recovery system.	8

### Textbooks:

1. Dryden's Outlines of Chemical Technology, M. Gopala Rao, M. Sittig, 3<sup>rd</sup> Edition, East West Press.
2. Shreve's Chemical Process Industries, George T. Austin, 5<sup>th</sup> Edition, Tata McGraw Hill Edition.
3. Plant Design and Economics for Chemical Engineers, Max S. Peters, K. D. Timmerhaus, 4<sup>th</sup> Edition, McGraw-Hill Inc.

## COURSE INFORMATION SHEET

**Course code:** CL208  
**Course title:** Heat Transfer Operations  
**Pre-requisite(s):**  
**Co-requisite(s):**  
**Credits:** L: 3 T: 1 P: 0  
**Class schedule per week:** 4 hrs  
**Class:** B. Tech  
**Semester / Level:** IV / Second  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives

This course enables the students to:

1.	Understand the basic laws of heat transfer.
2.	Develop methodologies for solving various practical engineering problems.
3.	Understand working principles of heat transfer equipments.
4.	Design heat exchangers and evaporators and analyze their performance.
5.	Develop basic competence related to other courses involving thermal energy systems and processes.

### Course Outcomes

After the completion of this course, students will be able to:

CO208.1	Understand mechanism of heat transfer and heat transfer related dimensionless numbers.
CO208.2	Determine heat transfer co-efficient using empirical correlations and apply to various heat transfer related problems.
CO208.3	Analyze the effect of boundary condition on heat transfer process.
CO208.4	Explain and apply concept of phase change.
CO208.5	Design heat exchangers.

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module I</b> <b>Basic Concepts:</b> Modes of heat transfer, conduction, convection and radiation, analogy between heat flow and electrical flow. <b>Conduction:</b> One dimensional steady state heat conduction, the Fourier heat conduction equation, conduction through plane wall, conduction through cylindrical wall, spherical wall, conduction through composite slab, cylinder and sphere, critical radius of	8

insulation, <b>Extended surfaces:</b> heat transfer from a fin, fin effectiveness and efficiency, Introduction to unsteady state heat conduction.	
<b>Module II</b> <b>Convection:</b> Natural and forced convection, the convective heat transfer coefficient. <b>Forced Convection:</b> Correlation equations for heat transfer in laminar and turbulent flows in a Circular tube and duct, Reynolds and Colburn analogies between momentum and heat transfer, heat transfer to liquid metals and heat transfer to tubes in cross flow. <b>Natural Convection:</b> Natural convection from vertical and horizontal surfaces, Grashof and Rayleigh numbers.	8
<b>Module III</b> <b>Heat transfer by radiation:</b> Basic Concepts of radiation from surface: black body radiation, Planks law, Wien's displacement law, Stefan Boltzmann's law, Kirchhoff's law, grey body, Radiation intensity of black body, View factor, emissivity, radiation between black surfaces and grey surfaces. Solar radiations, combined heat transfer coefficients by convection and radiation.	8
<b>Module IV</b> <b>Boiling and Condensation:</b> Pool boiling, pool boiling curve for water, maximum and minimum heat fluxes, correlations for nucleate and film pool boiling, drop wise and film wise condensation, Nusselt analysis for laminar film wise condensation on a vertical plate, film wise condensation on a horizontal tube, effect of non-condensable gases on rate of condensation. <b>Evaporation:</b> Types of evaporators, boiling point elevation and Duhring's rule, material and energy balances for single effect evaporator, multiple effect evaporators: forward, mixed and backward feeds, capacity and economy of evaporators.	8
<b>Module V</b> <b>Heat Exchangers:</b> Introduction, Industrial use, Types of heat exchangers, Co-current, Counter-current & Cross-current, Principal Components of a Concentric tube & Shell-and Tube Heat Exchanger, Baffles, Tubes and Tube Distribution, Tubes to Tube sheets Joint, Heat Exchangers with Multiple Shell & tube Passes, Fixed-Tube sheet and Removable-Bundle Heat Exchangers, log-mean temperature difference, overall heat transfer coefficient, fouling factors, Design of double pipe and shell and tube heat exchangers.	8

## COURSE INFORMATION SHEET

**Course code:** CL209  
**Course title:** Mass transfer operations I  
**Pre-requisite(s):** Thermodynamics (CL 201), Chemical Process Calculations (CL 204)  
**Co-requisite(s):** Transport Phenomena  
**Credits:** L: 3 T: 0 P: 0  
**Class schedule per week:** 03  
**Class:** B. Tech.  
**Semester / Level:** IV / Second  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives

This course enables the students to:

1.	Understand the basic knowledge of mass transfer operation and its application.
2.	Describe the processes diffusion, convective mass transfer and interphase mass transfer.
3.	Understand gas-liquid contact process and design absorption column.
4.	Describe the distillation process and its applications.
5.	Determine design parameters of distillation column.

### Course Outcomes

After the completion of this course, students will be to:

CO209.1	Explain the basic mechanism of mass transfer including diffusion and convective mass transfer.
CO209.2	Determine the mass transfer coefficient and solve problems related to interphase mass transfer.
CO209.3	Explain the gas-liquid contacting process and solve problems related to design calculation.
CO209.4	Solve problems on design calculation of distillation column.
CO209.5	Explain enhanced distillation and solve related problems.

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1</b> Introduction to mass transfer and applications, Principles of molecular diffusion, Fick's Law, Diffusivity, Equation of continuity and unsteady state diffusion, Diffusion in solids. Convective mass transfer and Mass transfer coefficient,	8

Correlation of mass transfer coefficients.	
<b>Module 2</b> Interphase mass transfer, Theories of Mass Transfer, individual gas and liquid phase mass transfer coefficient, overall mass transfer coefficient, Analogy between momentum, heat and mass transfer, Concept of stage wise contact processes.	8
<b>Module-3</b> The mechanism of absorption, Equipment for Gas Liquid contact, Kremser equation, plate and packed tower internals, Packed tower design, H. E. T. P., H. T. U., and N. T. U. concepts, height of column based on conditions in the gas film, height of column based on conditions in the liquid film, height of column based on overall coefficients, plate type towers, number of plates, plate efficiency, absorption factor.	8
<b>Module-4</b> Relative Volatility, calculation of number of plates by McCabe-Thiele method, Total and minimum reflux ratio, distillation with side streams, Enthalpy concentration diagram, calculation of number of plates by Ponchon and Savarit method, Steam distillation, Azeotropic & Extractive Distillations, batch distillation with reflux, Introduction to multicomponent distillation.	8
<b>Module-5</b> Shortcut method on multi component distillation, MESH equations (HK, LK component), Fenske-Underwood- Gilliland method.	8

## COURSE INFORMATION SHEET

<b>Course code</b>	<b>CL 214</b>
<b>Course title</b>	<b>Polymer Technology - I</b>
<b>Pre-requisite(s)</b>	<b>CL213</b>
<b>Co- requisite(s)</b>	<b>PH113,CH101,CH102</b>
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. Tech.
<b>Semester / Level</b>	III / Second
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

### Course Objectives

This course enables the students to:

1.	<i>Understand</i> the structure property relationship of various plastics.
2.	<i>Explain</i> the importance of compounding ingredients in plastics and get detailed knowledge about the ingredients
3.	<i>Interpret</i> the preparation, properties and application of various commodity plastics
4.	<i>Describe</i> the preparation, properties and application of thermosets and engineering plastics and various copolymers
5.	<i>Apply</i> the importance of structure property relationship to choose the materials for various applications

### Course Outcomes

After the completion of this course, students will be able to:

CO214.1	<b>Remember:</b> Recall the preparation, properties and application of various commodity and engineering plastics
CO214.2	<b>Understand:</b> Explain preparation, properties and application of commodity and engineering plastics.
CO214.3	<b>Apply:</b> Apply the importance of structure property relationship to choose the materials for various applications.
CO214.4	<b>Analyze:</b> Categorize the methods of the preparation, properties and application of specific copolymers.
CO214.5	<b>Evaluate:</b> Select additives for different plastics and formulate recipe for specific product manufacturing

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1</b> Additives for Plastics: Definition, classification, mechanism of action, method of incorporation of: fillers, coupling agents, plasticizer, cross linking agents, stabilizer, blowing agents.	8
<b>Module 2</b> Additives for Plastics Definition, classification, mechanism of action of flame retardants, colorants: pigments and dyes, antistatic agents, antiblock agents, nucleating agents, toughening agent, lubricants	8
<b>Module-3</b> Manufacturing process of Polymers: Flowsheet, processing application, major engineering problems of PE (LDPE, HDPE, LLDPE, XLPE, UHMHDEP), PTFE, PP.	8
<b>Module-4</b> Manufacturing process of Polymers :Flow sheet, Properties, processing, applications, major engineering problems, economics and Indian scenario of Polyamides: nylon 6,nylon66, polyimides, Cellulosics	8
<b>Module-5</b> Manufacturing process of Polymers properties, processing, applications of PS, PVC, PVOH, Acrylics, ABS, SAN, ionomers.	8

### Text Books:

1. Plastics materials: Brydson J.A., 3rd Edn., Butter worth, Woburn 1975
2. Plastics Engineering Hand Book: Frados J. Society of plastic & Industry. Inc. 4<sup>th</sup> Edn., Van Nostrand, N.Y. 1976
3. The Roll of Additives in Plastics, Mascia, L., Edward Arnold, 1974
5. Hand Book of Plastic Testing Technology, Vishu Shah, Wiley InterScience.

### Reference books:

1. Functional Monomers and Polymers Kiichi Jakenioto, Raphael M, Ottenbrites, Mikhiarukamachi - Marcel Dekker.
2. Shreve's chemical process Industries, George T. Sustin, McGraw Hill.
3. Unit process in Organicsynthesis, Groggins, P.H. McGrawHill.

### Gaps in the syllabus (to meet Industry/Profession requirements)

Practical problems faced in industries during manufacturing of additive materials needs to be addressed by industry personal

### POs met through Gaps in the Syllabus:

PO11, PO9, PO4

### Topics beyond syllabus/Advanced topics/Design

- Processing of plastics with emphasis on their flow properties in specific processing equipment under specific condition
- Analysis of flow characteristics of polymers during processing with respect to their chemical structure and properties

**POs met through Topics beyond syllabus/Advanced topics/Design PO12,PO11,PO10**

### Course Outcome (CO) Attainment Assessment tools & Evaluation procedure

**LABORATORY**  
**COURSE INFORMATION SHEET**

**Course code:** CL212  
**Course title:** Chemical Engineering Lab I  
**Pre-requisite(s):**  
**Co-requisite(s):**  
**Credits:** 2 (L: 0 T: 0 P: 4)  
**Class schedule per week:** 4  
**Class:** B. Tech.  
**Semester / Level:** IV / Second  
**Branch:** Chemical Engineering  
**Name of Teacher:**

**Course Objectives**

This course enables the students to:

1.	Plan experiments, make appropriate measurements, analyze the data and report the results.
2.	Apply theoretical concepts for data analysis and interpretation.
3.	Learn to operate equipments/instruments.
4.	Develop experimental skills.
5.	Examine the theory through experiments

**Course Outcomes**

After the completion of this course, students will be able to:

CO212.1	Demonstrate various fluid flow measuring devices and examine the performance of a centrifugal pump.
CO212.2	Operate mechanical separation equipments and analyse the results.
CO212.3	Evaluate heat transfer in composite wall and shell and tube heat exchanger.
CO212.4	Analyse the experimentally derived quantities with estimates from correlations/models discussed in the related theory courses.
CO212.5	Evaluate errors in measurements and assess the result.

## LIST OF EXPERIMENTS:

---

Sl. No.	Description
1	Studies on Venturimeter, Orificemeter and Rotameter.
2	Studies on flow over notches.
3	Studies on friction in pipes and pipe fittings.
4	Centrifugal Pump test rig.
5	Studies on Ball Mill.
6	Studies on Cyclone Separator.
7	Studies on Plate and Frame Filter Press.
8	Particle size analysis & Characterization of particulate solids.
9	Heat Transfer by Conduction Lagged pipe and composite wall.
10	Shell and tube heat exchanger.
11	Studies on Fluidization.
12	Studies on solid conveyor (bucket conveyor).

## COURSE INFORMATION SHEET

<b>Course code:</b>	CL301
<b>Course title:</b>	Mass transfer operations-II
<b>Pre-requisite(s):</b>	Mass transfer operation I (CL 209)
<b>Co-requisite(s):</b>	Transport Phenomena
<b>Credits:</b>	4 (L: 3 T: 1 P: 0)
<b>Class schedule per week:</b>	4
<b>Class:</b>	B. Tech.
<b>Semester / Level:</b>	V / Third
<b>Branch:</b>	Chemical Engineering
<b>Name of Teacher:</b>	

### Course Objectives

This course enables the students to:

1.	Explain various separation processes such as extractions, drying, and adsorption.
2.	Explain psychometric chart for calculating water vapour-air mixture properties.
3.	Solve design related problems for drying operation.
4.	Explain adsorption and crystallization techniques and solve related problems.
5.	Describe various membrane separation processes.

### Course Outcomes

After the completion of this course, students will be able to:

CO301.1	Solve design calculation problems on liquid-liquid and solid-liquid extraction.
CO301.2	Solve problems related to humidification and drying.
CO301.3	Explain the various adsorption isotherms and solve problems related to adsorption.
CO301.4	Explain the mechanisms of crystallization and solve related problems.
CO301.5	Apply the knowledge of membrane based separation processes like ultrafiltration, electrodialysis, pervaporation, reverse osmosis and membrane distillation.

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1</b> Introduction to Extraction, Liquid- liquid equilibria, Ternary diagram, solvent selection, Stage wise contact: single stage and multistage cross-current & counter-current extraction, number of equilibrium stages by graphical method, minimum solvent rate, extraction equipment. <b>Solid-liquid extraction:</b> Introduction to	8

leaching, general principle, Liquid -solid equilibria, factors affecting the rate of extraction, calculation of number of stages, batch processes, counter-current washing, stage calculation methods, leaching equipments	
<b>Module 2</b> Humidification and dehumidification operations, dry and wet bulb temperature, Adiabatic saturation curves etc. Psychometric chart, cooling towers (Natural draft, forced draft and induced draft cooling tower). Introduction to drying, rate of drying, batch drying mechanism, the mechanism of moisture movement during drying, classification and design of dryer.	8
<b>Module 3</b> Introduction to adsorption, nature of adsorbents, batch adsorption, Adsorption isotherms, Adsorption equipment, pressure swing, thermal-swing, breakthrough curves, design of fixed bed adsorption column. Principles of ion exchange and applications, ion exchange equilibria, rate of ion exchange.	8
<b>Module 4</b> Introduction to crystallization, crystal geometry, theory of Crystallization, eutectic point, Formation and growth of crystals, crystal yield, rate of crystallization, crystallization equipments.	8
<b>Module 5</b> Membrane separation processes, Polymer membranes, Membrane structure, Flow patterns in membrane separators, product purity and yield, membrane characterization, pervaporation, membrane module, Equipment and Design principles for Dialysis, Reverse osmosis, ultra-filtration, nano-filtration, electrodialysis. Membrane distillation.	8

## Course Information Sheet

<b>Course code:</b>	CL302
<b>Course title:</b>	Chemical Reaction Engineering-I
<b>Pre-requisite(s):</b>	CL204 Chemical Process Calculations
<b>Co- requisite(s):</b>	
<b>Credits:</b>	4 (L: 3 T: 1 P: 0)
<b>Class schedule per week:</b>	4
<b>Class:</b>	B. Tech.
<b>Semester / Level:</b>	V/ Third
<b>Branch:</b>	Chemical Engineering
<b>Name of Teacher:</b>	

### Course Objectives

This course enables the students to:

1.	Describe basic concept of kinetics and rate laws.
2.	Explain the characteristics of ideal homogeneous reactors.
3.	Analyse kinetic data.
4.	Describe the effect of heating on performance of non-isothermal reactors.
5.	Explain RTD in reactors.

### Course Outcomes

After the completion of this course, students will be able to:

CO302.1	Explain the concepts of Kinetics and Rate Laws.
CO302.2	Analyze ideal Reactors for homogeneous reactions.
CO302.3	Determine rate constant, reaction order and reactor volume using the kinetic data.
CO302.4	Analyze the performance of ideal and non-ideal reactors.
CO302.5	Design ideal reactors.

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Reactions and reaction rates - stoichiometry, extent of reactions, conversion, Selectivity. Reaction rate fundamentals – elementary reaction sequences, steady state approximation and rate limiting step theory.	6
<b>Module 2:</b> Ideal reactors - generalized material balance, design equations, graphical interpretation. Sizing and analysis of ideal batch, mixed (CSTR), plug flow and recycle reactors – solving design equations for constant and variable density	9

systems, reactors in series and parallel.	
<b>Module 3:</b> Analysis and correlation of experimental kinetic data - data collection & plotting, linearization of rate equations, differential and integral method of analysis. Multiple reactions - conversion, selectivity, yield, series, parallel, independent and mixed series-parallel reactions.	8
<b>Module 4:</b> <b>Non-Isothermal Operation and Stability of Reactors:</b> Non-isothermal design of ideal reactors, auto-thermal process, steady state multiplicity and effect of operating variables on the stability of CSTR, optimal temperature progression for first order reversible reaction.	9
<b>Module 5:</b> <b>Non-ideal reactor:</b> Residence time distribution (RTD) theory, role of RTD in determining reactor behaviour, age distribution (E) of fluid, experimental methods for finding E, relationship between E and F curve; Models for non-ideal flow – single parameter and multi parameter models.	8

## COURSE INFORMATION SHEET

<b>Course code:</b>	<b>CL312</b>
<b>Course title:</b>	<b>Polymer Processing</b>
<b>Pre-requisite:</b>	<b>CL213,CL214</b>
<b>Credits:</b>	<b>L: 03 T: 00 P: 00</b>
<b>Class schedule per week:</b>	<b>03</b>
<b>Class:</b>	<b>B.Tech.</b>
<b>Semester / Level:</b>	<b>05/3</b>
<b>Branch:</b>	<b>Chemical Engineering -Plastics &amp; Polymer</b>
<b>Name of Teacher:</b>	

### Course Objectives:

This course enables the students to:

1.	Outline the steps of specific process to manufacture a specific product, identify the various parts of the machine and explain the function of it
2.	Solve numerical problems on simple flow analysis for polymers during a specific processing, interpretation and analysis of rheological data using models for non-Newtonian fluids
3.	Predict the reasons behind specific product defect and propose probable solutions specific to processing technique
4.	Explain both practical and theoretical fundamentals of injection moulding and extrusion technology, including basic knowledge of the moulding process.
5.	Explain a wider range of polymer processes: thermoforming, compression and transfer moulding, rotational moulding, blow moulding, assembling techniques

### Course Outcomes (CO)

After the completion of this course, students will be able to:

CO 312.1	Remembering: Choose the corresponding process to be used to manufacture a specific product from suitable polymers.
CO 312.2	Understanding: Compare the methods of different processing techniques for product manufacture with a given set of plastic materials for the specific use
CO 312.3	Apply: Apply most modern technology to modify the process variables on the existing machine to manufacture a specific plastic/ rubber/composite product
CO 312.4	Analyze: Inspect the defects in plastic products, examine the product quality in terms of machine parameters and list professional engineering solutions as remedies which will be sustainable and economical
CO 312.5	Evaluate: Explain processing difficulties and estimate numerical problems related to polymer processing

## Syllabus

MODULE	No. of Lecture Hours
<b>Module1</b> Rheology of Polymer melts, Viscosity models, Dependence of viscosity on Temperature, Pressure, molecular weight, Viscoelastic models. Extensional viscosity, Rheometers: Capillary, Rotational, cone & plate. Die swell.	8
<b>Module2</b> Extrusion: Extruder Classification, Components- Drives, Bearing, Screw, Barrel, Breaker plate, Screen, hopper, Screw geometry, heating & cooling systems. Process analysis: Solids conveying, plasticating, melt conveying, Melt instabilities. Technology of product manufacturing: Pipe, Films, Wire coating, Tapes, Monofilaments.	10
<b>Module3</b> Injection moulding – Moulding cycle. Machine construction – barrel, screw, nozzles, clamping system, Machine ratings, Basic mould construction – classification, sprue, runner, gate systems, mould cooling, ejection, Part cooling analysis, Effect of process variables on product quality. Special Injection Mouldings. Product defects and its remedies.	6
<b>Module4</b> Classification, Machinery, process details, analysis, defects, remedies: Blow moulding, Thermoforming, Calendering..	8
<b>Module 5</b> Classification, Machinery, process details, analysis, defects, remedies: Rotomoulding, Compression moulding and Transfer moulding.	8

### Text Books:

## PROGRAM ELECTIVE (PE-I)

### COURSE INFORMATION SHEET

<b>Course code</b>	CL321
<b>Course title</b>	Petroleum Refinery Engineering & Petrochemicals
<b>Pre-requisite(s)</b>	Reaction Engg., Heat & Mass Transfer operations
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. Tech.
<b>Semester / Level</b>	V
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

#### Course Objectives:

This course enables the students to:

1.	Acquire knowledge of the sources of crude petroleum, extraction of the crude petroleum, its refining to the useful petro-products and efficient transport to the end users through network
2.	Learn all the techniques/processes of petroleum refining encompassing selection of the mass/heat transfer devices, their operation and basic design.
3.	Understand feed stocks of petrochemical industries and manufacture of important petrochemicals and their end uses.
4.	Examine how each refinery process works.
5.	Draw a flow diagram that integrates all refinery processes and resulting refinery products.

#### Course Outcomes:

After the completion of this course, students will be able to:

CO 321.1	Describe importance of refinery industries, methods for evaluation of crude & fractions, their inter-convertibility and the principles of operation of atmospheric and vacuum distillation processes.
CO 321.2	Develop knowledge of different refining processes such as cracking, reforming, isomerization, Alkylation etc.
CO 321.3	Explain feed stocks for petrochemical Industries and processes for the production of methane, ethylene, acetylene, propylene and butadiene.
CO 321.4	Explain aromatics separation/recovery process, uses of important aromatics and process for the production of important products based on aromatic such as styrene, cumene, phthalic Anhydride etc.
CO 321.5	Develop process flow-sheet showing important process equipments.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1</b> Exploration and Refining of Crude Oil: Introduction, Indian and world reserve of crude oil and its processing. Capacity, Market demand & supply of petroleum Fractions. methods for evaluation of crude & fractions: TBP, ASTM, EFV, and their inter-convertibility, yield Curve. Desalting of crude, pipe still furnaces, preflashing operation, Atmospheric and vacuum distillation units, types of Reflux arrangements, Calculation of tray requirement for ADU column. Products from Crude oil and their characterizations	8
<b>Module 2</b> Thermal conversion Processes: Thermal cracking processes – mechanism, applications e.g. visbreaking, thermal cracking, coking operations, Catalytic Conversion Processes : Catalytic cracking processes, Different FCC operating modes, Catalytic reforming operations, Hydro cracking, Simple process calculations.	8
<b>Module 3</b> Polymerization, Isomerization processes, Alkylation, Hydrocracking, Catalytic Polymerization for gasoline stock preparation. Finishing & Treatment processes : Different Hydrotreating processes. LOBS extraction	8
<b>Module 4</b> Petrochemical Industries & their feed stocks: Survey of Petrochemical industry. Resources and generation of different feedstocks – their purification, separation of individual components by adsorption, low temperature fractionation. Petrochemicals based on methane, ethylene, acetylene, propylene and butadiene	8
<b>Module 5</b> Separation and Utilization of Aromatics: Catalytic Reforming operation – Separation of BTX from reformat. Isolation of Benzene, Toluene, Xylene. Aromatics derived from thermal cracking of naptha, pyrolysis gasoline hydrogenation process. Alkylation of Benzene. Production of styrene, cumene and phenol, Isomerization of xylene. Production of phthalic Anhydride	8

## COURSE INFORMATION SHEET

<b>Course code</b>	CL322
<b>Course title</b>	Energy Engineering
<b>Pre-requisite(s)</b>	Basic Chemistry and Physics
<b>Co-requisite(s)</b>	
<b>Credits</b>	L: 3    T: 0    P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. TECH.
<b>Semester / Level</b>	V
<b>Branch</b>	Chemical Engineering/OPEN Elective
<b>Name of Teacher</b>	

### Course Objectives:

This course enables the students to:

1.	Understand global energy resources, demand and basic principles of waste heat recovery.
2.	Learn the principles and technologies of conversion of conventional energy resources to useful energy forms and products.
3.	Learn principles and technologies of conversion of non-conventional renewable energy resources to devices and various energy forms.
4.	Understand various renewable energy technologies and systems.
5.	Equip the students with knowledge and understanding of various possible mechanism about renewable energy projects.

### Course Outcomes:

After the completion of this course, students will be able to:

CO 322.1	Explain various energy sources, their availability, importance of energy conservation & audit and available energy conservation technologies.
CO 322.2	Describe fundamental concepts of conversion technologies of conventional energy resources such as coal, petroleum and gaseous fuels and their utilization.
CO 322.3	Explain principles and technologies of conversion of renewable energy resources to various other energy forms.
CO 322.4	Acquire the knowledge of modern energy conversion technologies.
CO 322.5	Assess major energy issues and challenges of the 21 <sup>st</sup> century.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1</b> Introduction to Energy Science and Energy Technology; Global Energy sources and their availability. Prospects of Renewable energy sources; Energy conservation: Principle of energy conservation and Energy audit. Energy conservation Technologies – Co generation, waste heat utilization, Heat recuperates, Heat regenerators, Heat pipes, Heat pumps Energy storage.	8
<b>Module 2</b> <b>Solid Fuels:</b> Introduction of solid fuels. COAL: Origin, reserves, classification & ranking, analysis, testing, storage; Coal carbonization: LTC, HTC, Ovens and Retorts; By-products recovery; Burning of coal and firing mechanism; fluidization combustion boilers <b>Liquid Fuels:</b> Constitution of petroleum, theory of formation of crude, characterization of crude oil & petroleum fuels, operation and flow-sheet of crude distillation, catalytic cracking, coking, vis-breaking and reforming processes, Process of a typical Indian refinery.	8
<b>Module 3</b> <b>Gaseous Fuels:</b> Physico-chemical principles, Calorific Value, Wobbe index, flow-sheet and burners and furnace operation of: Producer gas, Water gas, Carbureted water gas, oil gas, coke-oven gas, blast furnace gas, Natural Gas and LPG. Mechanism and principle of combustion. Laminar flame propagation, theory & structure of flame. Burning velocity & its determination. Diffusion of flame & Flame stabilization. <b>Nuclear energy:</b> Nuclear reactions, Nuclear Fuels and reactors, power generation. Global, Indian Scenario.	8
<b>Module 4</b> <b>Alternate Energy-I</b> <b>Geothermal energy:</b> Introduction, Resources and Utilization of Geothermal energy, Different types of Geothermal Electric power plant and their operations for Geothermal Energy systems in India. <b>WindEnergy:</b> Fundamentals and application, Wind Energy conversion system, Performance of wind machines, Electricity generation for wind. <b>Hydrothermal Energy:</b> Types, principle of operation <b>Bio Energy:</b> Biomass conversion for fuels; production methods based on thermochemical and bioconversion. Characteristics and uses; <b>Energy from the oceans:</b> Introduction Ocean Energy conversion Technologies. Types of Ocean Thermal Electric Power Generation system and their operation. Tidal power plant.	8
<b>Module 5</b> <b>Alternate Energy-II</b> <b>Solar Energy:</b> Solar radiation & its measurement, different types of solar	8

collectors. Solar energy devices: solar photovoltaic cells, solar thermal power plants and other; storage system & application of solar energy. <b>Fuel cell:</b> Introduction, design & principle operation of fuel cell, classification of fuel cells Applications and recent advances <b>Hydrogen energy:</b> Introduction, production of hydrogen energy: electrolysis, thermo-chemical, Biotechnology methods etc. Hydrogen storage & transportations. Safety & management. Hydrogen technology development in India.

## COURSE INFORMATION SHEET

Course code: CL323

Course title: Pollution control and equipment design

Pre-requisite(s):

Co- requisite(s):

Credits: L:3 T:0 P: 0

Class schedule per week: 3

Class: B. Tech.

Semester / Level:

Branch: Chemical Engineering

Name of Teacher:

### Course Objectives:

This course enables the students to:

1.	Impart knowledge on different types of environmental pollution.
2.	Impart knowledge on designing of various types of equipments to control different types of pollution
3.	Learn the concepts behind industrial waste characterization, treatment and disposal.
4.	Understand the science and technology associated with pollution control and monitoring.
5.	Describe methods of advanced effluent treatment.

### Course Outcomes:

After the completion of this course, students will be able to:

CO 323.1	Explain legislative aspects including water act, Air Act and effluent standards.
CO 323.2	Explain air pollution sources, air pollutants & their effects, working principle of Air pollution control equipments and their design.
CO 323.3	Describe water pollution sources, water pollutants & their effect, terms related with water pollution and working principle of primary equipments and their design.
CO 323.4	Explain conventional and advanced methods for waste water treatment.
CO 323.5	Explain solid waste collection, disposal and treatment methods.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Types of environments and their pollutants. Classification of pollutants, Legislative aspects including water act. 1974, Air Act 1981 and effluent standards. Air pollution: Sources and effects of different air pollutants, Sampling and analysis of air pollutants.	5
<b>Module 2:</b> Design and working principle of Air pollution control equipments: gravitational settling chambers, Cyclone Separator, ESP. Selection criteria of particulate collector. Dispersion of air pollutants and solutions to the atmospheric dispersion equation. Control of gaseous emission with special reference to Sulphur dioxide, Nitrogen oxide, carbon monoxide and hydrocarbons. Design of gaseous emission controlling equipments: Gas absorption, Adsorption, burners etc.	12
<b>Module 3:</b> Water pollution: Sources, sampling. Classification of water pollutants & their effect. BOD, COD, SS, TS, TDS etc. Primary Treatment- Design of Sedimentation tank, Floatation.	5
<b>Module 4:</b> Biological Treatment of wastewater: Design of activated sludge treatment system, trickling filter. Facultative ponds, aerobic and anaerobic ponds, etc. Advanced Treatment: microstraining, coagulation and filtration, sonoluminescence, adsorption, Ion exchange, solvent extraction, stripping, Membrane Separation techniques – ultrafiltration, Reverse osmosis, electrodialysis etc.	8
<b>Module 5:</b> Solid waste management, Sources and classification, public health aspects, Methods of collection and disposal methods: open dumping, landfill, incineration, composting, vermiculture; Solid waste management using bioremediation for specific pollutants like chromium. Mercury, ammonia / urea, phenolic sludge. Incinerator Design.	10

## COURSE INFORMATION SHEET

<b>Course code:</b>	CL324
<b>Course title:</b>	Analytical Instrumental Methods
<b>Pre-requisite(s):</b>	Core Course after IIIrd semester
<b>Co- requisite(s):</b>	
<b>Credits:</b>	L: 03 T: 00 P: 00
<b>Class schedule per week:</b>	03
<b>Class:</b>	B. TECH.
<b>Semester / Level:</b>	05
<b>Branch:</b>	Chemical Engineering
<b>Name of Teacher:</b>	Dr Akhil Kumar Sen

### Course Objectives:

This course enables the students to:

1.	Remember: Recite the different interactions of light with matter for chemical structure determination
2.	Understand: Summarize the different chromatographic techniques for separations of organic compounds
3.	Apply: Illustrate the microscopic techniques for materials characterization
4.	Analyze: Classify different spectroscopic techniques for structural determination
5.	Evaluation: Given a sample identify the structure and properties of the materials

### Course Outcomes:

After the completion of this course, students will be able to:

CO 324.1	Remember: Describe the different spectroscopic techniques for chemical structure determination
CO 324.2	Understand: Discuss the different chromatographic techniques for organic compounds
CO 324.3	Apply: Given a sample assess the physical and chemical characteristics.
CO 324.4	Analyze: Outline the working principles of various microscopy.
CO 324.5	Evaluation: Applying different instrumental techniques evaluate its properties

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:-</b> Spectroscopic methods (Absorption UV-VIS, NIR, IR, Raman, AAS), Emission Spectroscopy (fluorescence, phosphorescence), $^1\text{H}^1$ , $\text{C}^{13}$ NMR basic principles, Electron spin resonance spectroscopy, Mass spectroscopy.	8
<b>Module 2:-</b> Chromatography: Principles and Applications of High Performance Liquid Chromatography and High Performance Thin Layer Chromatography, Gas Chromatography, Affinity Chromatography, Pyrolysis Gas Chromatograph. Electrochemical analysis.	8
<b>Module 3:</b> Optical microscopy, Electron microscopy – TEM, SEM, Principle, Instrument, Specimen preparations, applications. Energy Dispersive Spectroscopy (EDS), Auger Electron spectroscopy(AES). Electron scanning chemical analysis (ESCA).	8
<b>Module 4:</b> Light Scattering,Principle of X Ray Scattering, Application of WAXS and SAXS, Degree of Crystallinity (Ruland's method), Crystallite size analysis.	8
<b>Module 5:-</b> Principle, Instrument, and application - Differential Scanning Calorimetry(DSC), Differential thermal analysis (DTA), Thermogravimetric analysis (TGA), Dynamic mechanical thermal analysis (DMTA).BET surface area, Physisorption and Chemisorption.	8

## COURSE INFORMATION SHEET

**Course code:** CL325  
**Course title:** FIBRE SCIENCE AND TECHNOLOGY  
**Pre-requisite(s):**  
**Co- requisite(s):**  
**Credits:** L: 03 T: 00 P: 00  
**Class schedule per week:** 03  
**Class:** B. Tech.  
**Semester / Level:** 06  
**Branch:** Chemical Engineering, Chemical Engineering-Plastics & Polymer  
**Name of Teacher:**

### Course Objectives

This course enables the students to:

1.	Build conceptual understanding of fibre manufacturing process
2.	Provide a systematic understanding of the principles, equipment used in fibre manufacturing process
3.	Systematic understanding of the advanced material characterization techniques based on microscopy, chemical, physical, and structural analysis.
4.	Relate the interdependence of structure, properties, and applications of these fibres
5.	Familiarize with recent advances in the field of fabric manufacturing, textile finishing processes

### Course Outcomes

After the completion of this course, students will be able to:

CO 325.1	Remembering: Choose & relate the suitable fibres for a specific application.
CO 325.2	Understanding: Classify & compare the different fibres, can outline the process involved in the manufacture of fabrics
CO 325.3	Applying: Utilize the knowledge of different types of fibre manufacture process.
CO 325.4	Analyzing: Examine the performance of basic fibre properties using empirical relations.
CO 325.5	Evaluating: Justify suitable additives composition for particular applications and recommend the cost effective formulation.

## Syllabus

MODULE	No. of Lecture Hours
<p><b>Module:1</b> Definition and classification of fibre. Natural fibre - chemical structures, source, use and limitations of Cotton, jute, linen, hemp, sisal, coir, wool, silk. Conventional man-made fibres: Rayon, Polyethylene terephthalate, Nylon 6 and nylon 66, Acrylic fibres, Polyolefins. High performance fibres: Aramid - Nomex and Kevlar, Ordered polymeric fibre, Aromatic polyesters. Inorganic fibres: Carbon fibre, Glass fibre, Boron fibre, Ceramic fibre, Alumina fibre. Metallic fibre. Conducting polymeric fibre. Optical fibre</p>	10
<p><b>Module2</b> Melt-spinning principles, classification, Melt-spinning line-extruder, spinning manifold, spin pack and the spinneret, cooling system, wind-up device, process variables. Structure formation during spinning- molecular orientation, crystallinity and morphology, integrated spin-draw process.</p>	7
<p><b>Module3</b> Solution spinning, process variables. Dry spinning &amp; wet spinning – dope preparation, spinning process, Influence of process parameters on fibre cross-section formation, spin-stretch, finish application and winding. Post spinning operations: Drawing, Spin finish, Heat setting. Tow process, intermingling.</p>	8
<p><b>Module4</b> Characterization of fibres - Fineness- denier &amp; tex, length, twists, crimping properties, Fibre Morphology, Shrinkage, Dye uptake, Mechanical properties, Thermal properties, Electrical properties, optical properties, Frictional properties, Chemical stability.</p>	7
<p><b>Module 5</b> Manufacture of textiles: Fibres to yarn, Yarns to fabrics- weaving, knitting, braiding, Compound fabric constructions, Finishing processes, Dyeing and printing. Non-woven Fabrics: Spunbonding and Melt-blowing processes.</p>	8

## COURSE INFORMATION SHEET

**Course code:** CL326  
**Course title:** Environment and Plastics  
**Pre-requisite(s):**  
**Co- requisite(s):**  
**Credits:** L: 03 T: 00 P: 00  
**Class schedule per week:** 03  
**Class:** B. Tech.  
**Semester / Level:** 05  
**Branch:** Chemical Engineering, Chemical Engineering-Plastics & Polymer  
**Name of Teacher:**

### Course Objectives:

This course enables the students to:

1.	Understand major environment issues and their relationship with the polymer industry.
2.	Understand of the stability of the polymeric materials in the environment.
3.	Learn the various methods employed for recycling of polymers.
4.	Explore the significance of recycling of plastics and rubber waste management
5.	Analyze various recycled polymer for specific applications

### Course Outcomes:

After completion of the course, the students will be able to:

CO 326.1	Receive the knowledge about diverse plastics and rubber waste recycling technologies
CO 326.2	Understand the recycling potential of plastics used in various industries
CO 326.3	Understand recycling methods of various waste plastics
CO 326.4	Use recycled polymers for various applications
CO 327.5	Analyze various recycled polymer modification for specific applications

### SYLLABUS:

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Environmental wastes and its disposal problems and solutions. Plastics production and consumption. Plastic wastes: Composition, quantities and disposal, alternative types of recycle methods. Sorting and segregation of plastic wastes.	8
<b>Module 2:</b> Mechanical recycling of polymer waste: Collection, washing & drying, sorting & separation, size reduction, and melt reprocessing. Equipment for mechanical recycling. Mechanical Recycling of different plastic wastes:	8

Polyolefins, polyamide, poly (ethylene terephthalate), PVC, polystyrene, polyurethanes, and mixed polymer waste. Problem encountered in mechanical recycling of plastic wastes.	
<b>Module 3:</b> Chemical recycling/feedstock recycling process for recovery of oil, monomer and energy. Depolymerization of polyamides, PMMA, PET, Polyamides, PVC, and polyoxymethylene. Feed stock recycling: Degradative Extrusion, Pyrolytic techniques, Hydrogenation, Gasification, and reduction in blast furnace.	8
<b>Module 4:</b> Energy recovery from plastic waste in waste incineration plant. Waste Rubber Recycling. Landfilling. Biodegradable plastics: an overview. Environmental issues, policies and legislation in India. Few case studies on life cycle analysis: Household plastics packaging (PE, PP, PVC), PET bottles, tyres. Applications different recycled polymers	11
<b>Module 5:</b> Toxicity of plastics: Commodity plastics, toxicity of additives used in plastics Industrial hygiene, Toxicity due to plastics combustion, rules and regulation of plastic toxicity	5

## COURSE INFORMATION SHEET

<b>Course code</b>	CL327
<b>Course title</b>	Introduction to Microelectronics Fabrication
<b>Pre-requisite(s)</b>	Basic Electrical and Electronics Engineering
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: 3    T: 0    P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. Tech.
<b>Semester / Level</b>	V
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

### Course Objectives:

This course enables the students to:

1.	Understand the basics of micromachining processes, including surface micromachining.
2.	Understand the bulk micromachining and LIGA (Lithography, Electroplating and Micro molding) processes.
3.	Learn the concepts and details on all techniques and processes of patterning, deposition, and material removal.
4.	Describe microelectronics fabrication processes for IC, MEMS, NEMS, FET, SENSORS manufacture.
5.	Learn the basic micro-fabrication processes and different characterization techniques.

### Course Outcomes:

After the completion of this course, students will be able to:

CO 327.1	Understand the theoretical principles of all processes involved in microelectronics fabrication.
CO 327.2	Identify, formulate, and solve problems relating to microelectronics manufacturing.
CO 327.3	Select a fabrication process or sequence of processes suitable for production of a microelectronic device.
CO 327.4	Design micro-machines by using fundamental skills learned in this course.
CO 327.5	Understand the processes for IC, MEMS, NEMS, FET, SENSORS manufacturing technology

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Introduction: Review of Chip Manufacturing Process, Front-End-Of-Line (FEOL) and Back-End-Of Line (BEOL) concepts; Patterning: Introduction; Patterning techniques classification- Top down, bottom up, combined, serial, parallel techniques, introduction to polymer thin films	8
<b>Module 2:</b> Lithography: basics, Types – Photolithography, Microcontact printing, Nano-imprint lithography, Hot embossing, Replica Molding (REM), Mircomolding in capillaries (MIMIC), Capillary Force Lithography, Polymer bonding lithography, Elastic contact lithography, Lithography induced self-assembly	8
<b>Module 3:</b> Deposition: Physical and Chemical Vapor Deposition (PVD & CVD) basics, Electrochemical deposition, Electro-migration & grain size, Implantation basics, Constant source and limited source diffusion, Mask making, Phase shift mask;	8
<b>Module 4:</b> Material Removal: Plasma and wet etching, Aluminum and Oxide etching, Chemical Mechanical Polishing (CMP) basics, Dishing, Erosion, Issues in Shallow Trench Isolation, Oxide Polish and Copper Polish, Dummy fill; Process Integration: BEOL Issues, Cu/Al metallization, oxide/low-k integration	8
<b>Module 5:</b> Introduction to MEMS, NEMS, FET, organic memory devices, VOC sensors, actuators and other applications. Testing: Scribeline Test for process evaluation, Functional Test for product evaluation, Process stability and control, Yield Models	8

# LABORATORIES

## COURSE INFORMATION SHEET

**Course code:** CL304  
**Course title:** Computer Aided Process Engineering Lab  
**Pre-requisite(s):**  
**Co- requisite(s):**  
**Credits:** 2 (L: 0 T: 0 P: 4)  
**Class schedule per week:** 4  
**Class:** B. Tech.  
**Semester / Level:** V / Third  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives

This course enables the students to:

1.	Improve the computing skills of the students.
2.	Solve complex engineering problems using advanced programming softwares.
3.	Develop process flow sheets.
4.	Analyze and evaluate the accuracy of different numerical methods.
5.	Analyze the data and prepare the report in a meaningful way.

### Course Outcomes

After the completion of this course, students will be able to:

CO304.1	Solve mathematical models using MATLAB.
CO304.2	Solve process control problems using simulink.
CO304.3	Develop flowsheets for reactors and distillation column .
CO304.4	Evaluate techno-economic feasibility of distillation column
CO304.5	Solve fluid flow and heat transfer using CFD tools.

## LIST OF EXPERIMENTS:

Sl. No.	Description
1	Solving ODE, non-linear equations, linear simultaneous equations, optimization of single variable equation (interval halving & golden section search method)using MATLAB .
2	Solving VLE problems for ideal systems using MATLAB (Bubble point, dew point, flash vaporization).
3	Solving VLE problems for non-ideal systems using MATLAB (Bubble point, dew point, flash vaporization).
4	Solving process control problems using MATLAB Simulink (Isothermal CSTR).
5	Solving process control problems using MATLAB Simulink (non-isothermal CSTR).
6	Solving process control problems using MATLAB Simulink (liquid-level control).
7	Reactor modeling and design using ASPEN Plus.
8	Design, simulation and economic optimization of distillation column for binary mixtures.
9	Design and simulation of multicomponent distillation column.
10	Solving Fluid flow and heat transfer problems using CFD tools.

**Credits:** 2 (L: 0 T: 0 P: 4)  
**Class schedule per week:** 4  
**Class:** B. Tech.  
**Semester / Level:** V / Third  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives:

This course enables the students to:

1.	Plan experiments, make appropriate measurements, analyze the data and report the results.
2.	Apply theoretical concepts for data analysis and interpretation.
3.	Learn to operate equipments/instruments.
4.	Develop experimental skills.
5.	Examine the theory through experiments

### Course Outcomes

After the completion of this course, students will be able to:

CO305.1	Operate mass separation equipments and analyse the results.
CO305.2	Evaluate heat transfer in various heat exchanger.
CO305.3	Estimate heat and mass transfer parameters for unit operation equipments.
CO305.4	Analyse the experimentally derived quantities with estimates from correlations/models discussed in the related theory courses.
CO305.5	Evaluate errors in measurements and assess the result.

## LIST OF EXPERIMENTS:

Sl. No.	Description
1	Diffusion of vapor in air.
2	Absorption in wetted wall tower.
3	Drying rate curve in Tray dryer.
4	Sieve Plate Distillation column (determination of overall tray efficiency).
5	Crystallizer.
6	Heat transfer in agitated vessel.
7	Spiral Heat exchanger.
8	Plate heat exchanger.
9	Membrane preparation by phase inversion and studies on cross-flow and hollow fibre membranes.
10	Studies on Heat and Mass Transfer in Cooling Tower.
11	Steam Distillation of turpentine.
12	Batch Distillation with reflux in packed column with stacked packing.
13	Liquid-Liquid extraction in York Schieble Extraction column.
14	Studies on adsorption column and Bonnotto type solid liquid extractor

### Text books:

## Course Information Sheet

<b>Course code:</b>	CL306
<b>Course title:</b>	Chemical Reaction Engineering-II
<b>Pre-requisite(s):</b>	Chemical Reaction Engineering-I
<b>Co- requisite(s):</b>	
<b>Credits:</b>	L: 3    T: 0    P: 0
<b>Class schedule per week:</b>	3
<b>Class:</b>	B. Tech
<b>Semester / Level:</b>	VI / Third
<b>Branch:</b>	Chemical Engineering
<b>Name of Teacher:</b>	

### Course Objectives:

This course enables the students to:

1.	Discuss the basic concepts of catalysis.
2.	Analyze chemical reactions and reactors.
3.	Explain kinetics and mechanistic aspect of catalysts
4.	Develop critical and creative thinking skills related to reaction engineering.
5.	Explain the kinetics of bio-reactions.

### Course Outcomes:

After the completion of this course, students will be able to:

CO306.1	Describe the mechanism of homogeneous and non-homogeneous catalytic reactions.
CO306.2	Model solid catalyzed gas phase reaction.
CO306.3	Explain the effect of heat and mass transfer on kinetics of catalytic reactions.
CO306.4	Explain the kinetic behaviours of bioreactors.
CO306.5	Describe the kinetic and transportation behaviour of gas liquid systems.

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Introduction to Catalysis, homogeneous and heterogeneous catalysis. Preparation and characterisation of catalysts. Physical and chemical adsorption, Adsorption isotherms, Determination of BET surface area and pore volume of the Catalyst.	6
<b>Module 2:</b> Kinetics of solid catalysed gas phase reaction. Laboratory reactors for catalytic gas solid reactions. Design concepts.	7

<b>Module 3:</b> Mass transfer, Diffusion and Chemical reactions in catalysts. Effects of external mass transfer and heat transfer, Effectiveness factor. Non-catalytic gas-solid reactions, different model for gas-solid reactions.	10
<b>Module 4:</b> Bio-Reactors, Effect of Transport Processes: Introduction to Bioreactor design: Continuously Stirred aerated tank bioreactors. Mixing power correlation. Determination of volumetric mass transfer rate of oxygen from air bubbles and effect of mechanical mixing and aeration on oxygen transfer rate, heat transfer and power consumption.	6
<b>Module 5:</b> Gas liquid reactions, film and penetration theories, enhancement factor in gas-liquid reactions, gas-liquid reactors.	11

**Text books:**

## COURSE INFORMATION SHEET

**Course code:** CL313  
**Course title:** Polymer Technology-II  
**Pre-requisite(s):** CL213, CL214  
**Co- requisite(s):** Nil  
**Credits:** L: 03 T: 00 P: 00  
**Class schedule per week:** 03  
**Class:** B. Tech.  
**Semester / Level:** 06/3  
**Branch:** Chemical Engineering- Plastics and Polymer  
**Name of Teacher:**

**Course Objectives:** This course enables the students to:

1	Define the properties on thermoplastic and thermoset resins.
2	Interpret the properties of engineering polymer and functional polymer
3	Classify the polymer in different application.
4	Predict the properties of polymer for certain applications
5	Synthesize polymer for a specific applications

**Course Outcomes:** After completion of the course, learner will be able to:

CO 313.1	Remembering:Relate properties of given thermoplastic and thermoset resins to chemical structures, recall industrial manufacturing processes of polymers suitable for different applications.
CO 313.2	Understanding: Summarize the mechanical, thermal etc. properties of engineering polymer and functional polymers
CO 313.3	Apply:Choose specific polymer for a given product application.
CO 313.4	Analyze:Compare the polymers in a given list in terms of their structure-property relationship and classify according to specific applications and product manufacturing techniques.
CO 313.5	Evaluate:Assess the performance of given polymer product in terms of standard testing methods and decide on the suitability of it for specific application

## Syllabus

<b>MODULE</b>	<b>No. of Lecture Hours</b>
<b>MODULE- I Thermosets:</b> Phenol-formaldehyde resins, Urea-formaldehyde, Melamine-formaldehyde, alkyl & aryl epoxies, polyurethanes, silicones, Unsaturated Polyester	<b>8</b>
<b>MODULE- II</b> High performance thermoplastics: thermoplastic Polyesters- PET, PBT, Polycarbonate, Polyacetal, Polyphenylene oxide, sulfone polymers, Polyphenylene sulfide, Polyether Ketones, liquid crystal polymers, polybenzimidazole.	<b>10</b>
<b>MODULE- III</b> Plastics in automobile industries, home appliances, building construction, film packaging, biomedical application, electronic application, cable application, agriculture application, space and defence application.	<b>8</b>
<b>Module-IV:</b> Polymer Blends: Definition, difference between polymer blends and alloys, classification of polymer blends and alloys, principle of polymer compatibility, miscibility effect of molecular structure on polymer-polymer interaction, thermodynamics of polymer-polymer mixing, Rheology of Polymer Blends, Blend morphology & characterization.	<b>7</b>
<b>Module-V:</b> Polymer composite systems: Types of composites, reinforced thermoplastic, thermoset, elastomer Processing techniques - open mould, hand layup, spray up, vacuum bag moulding, pressure bag moulding, autoclave moulding, closed mould, SMC, DMC, RTM. Continuous manufacturing process - pultrusion, filament winding, centrifugal casting.	<b>7</b>

### Text Books:

1. Plastic Materials: Brydson J.A. 3rd Edn. Butterworth Woburn, 1975
2. The Roll of Additives in Plastics, Mascia, L., Edward Arnold, 1974
3. Functional Monomers and Polymers Kiichi Jakenioto, Raphael M, Ottenbrites, Mikhiarukamachi - Marcel Dekker.

### Reference Books:

1. Plastics Engineering Hand Book: Frados J. Society of plastic & Industry. Inc. 4<sup>th</sup> Edn., Van Nostrand, N.Y. 1976
2. Shreve's chemical process Industries, George T. Sustin, McGraw Hill.
3. Unit process in Organic synthesis, Groggins, P.H. McGraw Hill.
4. Hand Book of Plastic Testing Technology, Vishu Shah, Wiley Inter Science.

### Gaps in the syllabus (to meet Industry/Profession requirements)

- Guest lecture by Industry personnel
- Industry visit

- Project work on problems/topics given by industries

### POs met through Gaps in the Syllabus

PO5, PO3, PO10

### Topics beyond syllabus/Advanced topics/Design

Photo responsive polymers, Ion conducting polymers, bio polymers (proteins, nucleic acids, polysaccharides), Piezoelectric polymers, Inorganic polymers, biodegradable polymers, Magnetic polymers

### Course Outcome (CO) Attainment Assessment tools & Evaluation procedure

#### Direct Assessment

## COURSE INFORMATION SHEET

**Course code:** CL308  
**Course title:** Process Control and Instrumentation  
**Pre-requisite(s):** Chemical process calculations CL204, Computer aided process engineering CL303  
**Co-requisite(s):** Chemical Reaction Engineering – I CL302  
**Credits:** L:3 T:0 P:0  
**Class schedule per week:** 3  
**Class:** B. Tech  
**Semester / Level:** VI / Third  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives:

This course enables the students to:

1.	Understand the key concepts of instrumentation and measurements of a chemical process plant.
2.	Understand and analyze the dynamics of different types of open loop and closed loop system.
3.	Analyze stability and tuning of a control system.
4.	Apply the concepts of control in unit operation and unit process.
5.	Apply the concepts of various types of computer-based control and advanced control strategies.

### Course Outcomes:

After the completion of this course, students will be:

CO308.1	Define the operating principles of various instruments and measurements in a chemical process plant.
CO308.2	Understand Laplace transformation and the dynamics of control systems and construct the block diagram of closed-loop control system with mathematical formulations.
CO308.3	Analyze the stability of a control system.
CO308.4	Design of controller using different tuning techniques.
CO308.5	Apply computer-based advanced process control for better accuracy, economy, product quality and safety.

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Process Instrumentation, measurement and its classification by physical characteristics, working principles of transducers/sensors employed for the	7

measurement of flow, level, pressure, temperature, concentration, etc. Control valves and their characteristics. [7L]	
<b>Module 2:</b> The concept of process dynamics and control, review of Laplace transform methods, Laplace transform of disturbances and building functions, dynamic response of first and second order system, interacting and noninteracting system, transportation lag, measurement lag. Linear closed-loop system, its different elements, block diagram, negative feedback and positive feedback system, servo problem and regulator problem.	8
<b>Module 3:</b> Controllers and final control element, PID. Stability of a linear closed-loop system, generalized stability criteria, Routh stability criteria, root locus, Frequency Response-Bode stability criteria, Bode plot.	8
<b>Module 4:</b> Controller tuning- Ziegler-Nichols rules, Cohen and Coon rules, criteria for good control, control system design by frequency response, use of gain and phase margins. Basic concepts of Control of Reactors, Unit operation equipment- heat exchanger, distillation column, flash chamber, mixer.	9
<b>Module 5:</b> Digital computer control loop and its elements, modes of computer control- direct digital control, SCADA, PLC, DCS. Advanced control strategies- feedforward, cascade, dead time compensation, ratio control, multivariable control.	8

## COURSE INFORMATION SHEET

<b>Course code:</b>	<b>CL314</b>
<b>Course title:</b>	Elastomer Technology
<b>Pre-requisite(s):</b>	<b>CL213, CL313</b>
<b>Co- requisite(s):</b>	<b>Nil</b>
<b>Credits:</b>	L: 03 T: 00 P: 00
<b>Class schedule per week:</b>	<b>03</b>
<b>Class:</b>	<b>B. Tech</b>
<b>Semester / Level:</b>	<b>06/3</b>
<b>Branch:</b>	<b>Chemical Engineering- Plastics and Polymer</b>
<b>Name of Teacher:</b>	Prof.G. Sarkhel, Prof. S.Goswami, Dr.P.Datta

### Course Objectives

This course enables the students:

1.	To interpret the history and evolution of elastomer and to understand the basic physico-chemical character of elastomer
2.	To understand the processing and compounding of Natural Rubber
3.	To make the students aware of various rubbers – their preparations, properties and uses
4.	To interpret chemical additives mixed with elastomers, and processing technology for manufacturing rubber products
5.	To understand the material selection and fabrication of different rubber-based products

### Course Outcomes

After the completion of this course, students will be able to

CO 314.1	<b>Remembering: List the</b> synthesis procedure and characteristics of industrially available elastomers
CO 314.2	<b>Understanding: Explain the</b> compounding recipe with given chemical additives and infer appropriate raw rubber materials for a given application
CO 314.3	<b>Applying: Select</b> the elastomer processing operations depending on the materials characteristics and final product requirements
CO 314.4	<b>Analysing: Examine</b> the rubber compound formula, list suitable processing parameters and conditions of rubber processing with a given equipment and material
CO 314.5	<b>Evaluating: Recomend the</b> product manufacturing technique with rubber and <b>estimate</b> the manufacturing cost of rubber based products at industry scale

## Syllabus

MODULE	No. of Lecture Hours
<b>Module - 1</b> History and growth of rubber technology, general consideration of diene polymers. Physics of raw vulcanised rubber, <b>Natural rubber</b> : Chemical structure, auto oxidation and other reactions, blending with other polymers, compounding, vulcanisation. composition, stability, gelation, preparation of dry rubber from natural rubber latex, types and grades of rubber.	7
<b>Module - 2</b> Chemistry and technology of synthetic rubbers -Poly isoprene, SBR, nitrile, polybutadiene, polychloroprene, EVA, EPDM, Butyl rubber, poly sulphide rubbers, chlorosulfonated polyethylene, silicones, thermoplastic elastomers.	12
<b>Module 3</b> Rubber compounding and mixing, Mastication, Additives - fillers, accelerators, activators, antioxidants, antiozonants, sulphur etc. Theory and technology of reinforcement. Mechanism and practice of sulphur vulcanization and non-sulphur, vulcanization (peroxide, metal oxides and other special curing systems)	8
<b>Module 4</b> Machineries: Two roll Mill, Mixers, Extruders, Calendars, Testing equipments: mooney viscometer, oscillating disc rheometer	5
<b>Module - 5</b> Manufacturing of Latex based product. Tyre technology Compounding & processing technology, footwear technology. Extruded rubber profile. Hose technology, conveyor & V- Belt, metal rubber bonding.	8

## PROGRAMME ELECTIVE II

### COURSE INFORMATION SHEET

<b>Course code</b>	CL331
<b>Course title</b>	Process Modelling, Simulation and Optimization
<b>Pre-requisite(s)</b>	Mathematics, Thermodynamics, Chemical Process Calculations.
<b>Co- requisite(s)</b>	Mass Transfer Operation, Heat Transfer Operation, Chemical Reaction Engg.
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. TECH.
<b>Semester / Level</b>	VI / THIRD
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

#### Course Objectives:

This course enables the students to:

1.	Develop information flow diagram from real process, from information flow diagram to numerical form.
2.	Design, manage and operate procedures for the simulation, control and instrumentation of chemical processes.
3.	Develop model equations for Chemical Engineering systems and solve the equations using numerical techniques.
4.	Solve chemical engineering optimization problems using traditional and global optimization techniques.
5.	Develop introductory methods to computer simulations.

#### Course Outcomes:

After the completion of this course, students will be able to:

CO331.1	Develop information flow diagram from real process, from information flow diagram to numerical form.
CO331.2	Design, manage and operate procedures for the simulation, control and instrumentation of chemical processes.
CO331.3	Apply Conservation of Mass, Momentum and Energy to Chemical Engineering Systems.
CO331.4	Develop Mathematical Model Equations for Chemical Engineering Systems.
CO331.5	Solve the Mathematical Model Equations using Numerical Techniques.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<p><b>Module 1</b> Introduction to Modeling and Simulation: Uses of Mathematical Models, Principles of Formulation, Fundamental laws: Continuity equation, Energy equation, Equation of motion, Transport equations, Equations of state, Equilibrium, Chemical kinetics. Types of Mathematical Models – Linear model vs. nonlinear model, Static model vs. dynamic model, Lumped and distributed parameter models, Fundamental model vs. empirical model.</p>	8
<p><b>Module 2</b> Examples of Mathematical models of chemical engineering systems: Series of isothermal constant-holdup CSTRs, CSTRs with variable holdups, Two heated tanks, Gas-phase pressurized CSTR, Non-Isothermal CSTR, Single component vaporizer, Multicomponent flash drum, Batch reactor, Ideal binary distillation column, Multicomponent non-ideal distillation column, Batch distillation with holdup.</p>	8
<p><b>Module 3</b> Computer Simulation: Gravity-Flow Tank, CSTRs in series, Non-Isothermal CSTR, Batch Reactor, Isothermal Flash Calculations (Ideal Mixture).</p>	8
<p><b>Module 4</b> The nature and organization of Optimization Problems: What Optimization is all about, Why Optimize, Scope and Hierarchy of Optimization, Examples of Applications of Optimization, The Essential Features of Optimization Problems, General Procedure for solving Optimization Problems, Obstacles to Optimization. Formulation of Optimization Problems: Degree of Freedom, Objective Functions, Constraints, Continuity of Functions, Unimodal and Multi-modal Functions, Concave and Convex Functions.</p>	8
<p><b>Module 5</b> Optimization of Unconstrained Functions: One-Dimensional Search, Scanning and Bracketing Procedures, Newton and Quasi-Newton Methods of Unidimensional Search, Polynomial Approximation Methods, One-Dimensional Search Applied in a Multidimensional Problem, Unconstrained Multivariable Optimization, Random Search, Grid Search, Univariate Search, Simplex Search Method, Steepest Descent, Conjugate Gradient, Basic Linear Programming, Simplex Algorithm, Branch and Bound Method, Basics of Global Optimization Algorithms, Introduction to Genetic Algorithm.</p>	8

## COURSE INFORMATION SHEET

**Course code:** CL332  
**Course title:** Safety and hazards in chemical industries  
**Pre-requisite(s):**  
**Co- requisite(s):**  
**Credits:** L: 03 T: 00 P: 00  
**Class schedule per week:** 3  
**Class:** B. Tech.  
**Semester / Level:**  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives:

This course enables the students to:

1.	Identify and manage various aspects of occupational hazards existing in chemical industries.
2.	Develop a safe protocol by safety audit and risk assessment and minimize potential damages to process equipment's, people and the environment.
3.	Understand fundamentals of chemical process safety and hazards management.
4.	Learn important component of the risk management plat i.e. hazards identification, hazard analysis etc.
5.	Describe the advancement in the field of the risk assessment.

### Course Outcomes:

After the completion of this course, students will be able to:

CO 332.1	Understand the importance of plant safety and safety regulations, personal protective equipment's, principles and procedures of safety audit.
CO 332.2	Identify and mitigate different types of toxic chemical hazards
CO 332.3	Implement various safety aspect of fire and explosion in a chemical plant
CO 332.4	Assess and mitigate different hazards due to storage and transportation of chemicals, plant operations.
CO 332.5	Design safety protocols for chemical industry using various hazard evaluation tools.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>MODULE -1: Introduction to industrial safety and Hazards:</b> Definition of safety, Hazard and Risk, Chemical Hazard Symbols, Personal protective equipment, Safety program, Accident and loss statistics (OSHA incident rate, fatal accident rate (FAR), and fatality rate), Engineering ethics, Industrial hygiene. Factories Act, 1948 and Environment (Protection) Act, 1986 and rules thereof, Review of industrial accidents.	8
<b>MODULE -2: Toxic Substances and Confined Spaces:</b> Toxic Substances Definition, Classes of Toxicity, Entry Points for Toxic Agents, Effects of Toxic Substance, Relationship of Doses and Responses, Threshold Limiting Values, Exposure Thresholds, Airborne Contaminants, Confined Spaces Hazards, Respiratory Protection, Prevention and Control	8
<b>MODULE -3: Fire and Explosion:</b> Work Place Hazard, Dangerous Substance Fire triangle, Effective Ignition Source, Static Electricity, Explosion: BLEVE, VCE, Detonation and Deflagration, Flammability Limits, LOC, Flash point, Flammability Diagram, Flammable and Combustible Liquids.	8
<b>MODULE -4: Safety and Hazard in Chemical Process Plant:</b> Decomposition & Runaway Reactions, Initiating factors Reactive Chemical Hazard, Case Studies: T2 Laboratories, Florida, Synthron, North Carolina, Phenol Formaldehyde Reaction. Assessing Reaction Hazard; Tools for evaluating thermal explosion, Steps to Reduce Reactive Hazards. Process Plant Design: Flow Diagrams; Piping and Instrumentation Diagram, Control System, Alarms. Chemical Plant Layout: Passive protection, Active Protection, Emergency Shutdown System, Safety Integrity Level, Inherent Safety Techniques	8
<b>MODULE -5: Hazard Identification and Evaluation Technique:</b> Quantitative, Qualitative Safety Review, Process /System Checklists, Dow Fire and Explosion Index, What-If Analysis. HAZOP Study, Reliability, Probability Distribution, Demand and Failure, Fault Tree Analysis (FTA), Minimal Cut Set Identification, Event Tree Analysis.	8

## COURSE INFORMATION SHEET

<b>Course code</b>	CL333
<b>Course title</b>	Fluid-Solid Operation
<b>Pre-requisite(s)</b>	Fluid Mechanics, Mechanical Operation
<b>Co-requisite(s)</b>	
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. TECH.
<b>Semester / Level</b>	VI
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

### Course Objectives:

This course enables the students to:

1.	Understand the basic principles of fluid-particle operations.
2.	Learn the concepts of the various industrial operations involving particulate solids.
3.	Describe the fundamentals of fluid-particle mechanics.
4.	Understand practical aspects for industrial application.
5.	Explain the handling of particles along with fluids in various unit operations.

### Course Outcomes:

After the completion of this course, students will be able to:

CO.333.1	Explain the Flow around immersed bodies.
CO.333.2	Estimate drag force and terminal settling velocity for single particles.
CO.333.3	Estimate Pressure drop in fixed and fluidized beds.
CO.333.4	Classify various solid-solid/solid-fluid separation processes.
CO.333.5	Describe the mechanical separation process of fine particles from fluid.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Introduction: Solid particle characterization, Flow around immersed bodies: Concept of drag, boundary layer separation, skin and form drag, drag coefficients, Streamlining, Stagnation point, Stagnation Pressure.	8
<b>Module 2:</b> Motion of particles through fluids: Mechanics of Particle Motion, Equations for 1-D motion of particle through fluid, Motion from gravitational force, Motion in a centrifugal field, Terminal Velocity, Drag Coefficient, Motion of spherical particles, Criterion for settling regime, Hindered Settling. Packed bed: Void fraction, superficial velocity, channeling, Ergun equation and its derivation, Kozeny Carman equation, Darcy's law and permeability.	8
<b>Module 3:</b> Fluidization: Introduction, Advantages and Disadvantages of Fluidized Beds for Industrial Operations, Conditions for Fluidization, Minimum Fluidization velocity, Pressure Drop, Pressure drop-versus-velocity diagram, Effect of Pressure and Temperature on Fluidized Behaviour, Sintering and Agglomeration of Particles at High Temperature, Types of Fluidization, Particulate Fluidization, Bubbling Fluidization, Geldart Classification of Particles, Fast Fluidization, Circulating fluidized beds. Entrainment and Elutriation from Fluidized Beds.	8
<b>Module 4:</b> Industrial Applications of Fluidized Beds: Fluidized Combustion of Coal, Fluid Catalytic Cracking, Fluid Coking, Flexi Coking, Thermal Cracking, Incineration of Solid Waste, Gasification of Coal and Coke, Bio-fluidization.	8
<b>Module 5:</b> Tabling, jigging, magnetic and electrostatic separation. Surface behavior and floatation principles. Floatation machines, differential floatation and floatation circuit design. Important beneficiation circuits of coal and minerals like chalcopyrite, sphalerite, galena, magnetite and Hematite, bauxite, Steel alloying ore.	8

## COURSE INFORMATION SHEET

**Course code:** CL334

**Course title:** Reservoir Engineering

**Pre-requisite(s):** calculus, basic chemistry, thermodynamics

**Co-requisite(s):** transport phenomena

**Credits:** L: 3 T: 1 P: 0

**Class schedule per week:** 03

**Class:** B. TECH.

**Semester / Level:** Vth

**Branch:** Chemical Engineering

**Name of Teacher:**

### Course Objectives:

This course enables the students to:

1.	Learn about basic rock and fluid properties relevant to petroleum reservoir.
2.	Emphasize the impact of reservoir fluid behaviour on reservoir exploitation
3.	Understand the drive mechanisms of a reservoir
4.	Apply a critical thinking and problem solving approach towards the principles of reservoir engineering.
5.	Describe production mechanism in reservoir and related expected performance.

### Course Outcomes:

After the completion of this course, students will be able to:

CO334.1	Understand basic characteristics of various reservoir and reservoir fluids
CO334.2	Analyze the multiphase flow behaviour through porous media
CO334.3	Understand mechanics of oil production (natural reservoir energies & expulsion of fluids)
CO334.4	Learn basic concepts of reservoir engineering and technologies for oil recovery.
CO334.5	Describe the advanced techniques of oil and gas recovery.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1</b> Petrophysical properties of Reservoir Rock Properties: sedimentary rocks, anticline, Porosity, permeability, fluid saturation, effective and relative permeability, wettability and capillary pressure.	8
<b>Module 2</b> Reservoir Fluids: Reservoir fluid characteristics, reservoir fluid sampling, PVT properties determination, different correlations and laboratory measurements. Phase behaviour of hydrocarbon system.	8
<b>Module-3</b> Flow of Fluids through Porous Media: Darcy's law, single and multiphase flow, linear, radial & spherical flow, steady state & unsteady state flow, flow through fractures, GOR, WOR equations, tortuosity.	8
<b>Module-4</b> Reservoir Pressure Measurements and Significance: Techniques of Pressure measurement. Reservoir Drives: Reservoir drive mechanics, Drive indices and recovery factors. Reserve estimation: Estimation of petroleum reserve, resource & reserve concept, volumetric material balance.	8
<b>Module-5</b> Production behaviour of gas, gas condensate and oil reservoirs. Rock and fluid compressibility effect. Water influx in reservoir, Performance prediction of depletion, gas cap, water and combination drive, reservoir pressure maintenance, Displacement process, Water flood performance, enhanced oil recovery processes.	8

### Text books:

1. Reservoir Engineering Handbook – Tarek Ahmed
2. Petroleum reservoir engineering: Petrophysical properties: J. W. Amyx; D. M. bass, Jr, R. L. Whiting-TEX
3. Fundamentals of Reservoir Engineering: J. C. Calhoun Jr.T
4. Oil reservoir Engineering: S. J. Pirson
5. Reservoir engineering Manual: F. W. Cole
6. Basics of Reservoir Engineering: R. Cosse

### Reference books:

Applied petroleum reservoir engineering, Ronald E. Terry and J. Brandon Rogers, Third edition, Prentice Hall.

## COURSE INFORMATION SHEET

<b>Course code:</b>	CL335
<b>Course title:</b>	Biomaterials
<b>Pre-requisite:</b>	PH113, CH101, CH102, CL213
<b>Co- requisite(s):</b>	The course is to be floated as Programme elective -II
<b>Credits:</b>	L: 03 T: 00 P: 00
<b>Class schedule per week:</b>	03
<b>Class:</b>	B. Tech
<b>Semester / Level:</b>	06/03
<b>Branch:</b>	Chemical Engineering (Plastics & Polymer)
<b>Name of Teacher:</b>	

### Course Objectives:

This course enables the students to:

1.	Remembering: Distinguish the various materials for biomedical application
2.	Understanding: Define biocompatibility of various materials and classify them according to their suitability for the specific biomedical application
3.	Analyzing : Distinguish the advantages and limitations of specific biomaterials for a specific biomedical application
4.	Applying: Identify the specific biomaterial to be used for a specific tissue or organ replacement
5.	Evaluating: Compare the durability, cost and properties of various biomaterials for specific use

### Course Outcomes:

After the completion of this course, students will be able to:

CO.335.1	Analyze : Justify the selection of a specific biomaterial for a specific biomedical application on the basis of specific characteristic features
CO.335.2	Apply: Explain the suitability of polymeric biomaterials over the others on the basis of experimental evidences
CO.335.3	Evaluate: Given a set of known polymers select the most suitable one for a specific biomedical application on the basis of biocompatibility cytotoxicity performance
CO.335.4	Remember: Different types of materials used in biomedical application, classify these and compare properties
CO.335.5	Understand: Biocompatibility, bio-absorbability and limitations of various materials for specific application

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>MODULE- I</b> Biomaterials-definition-classification-metal-ceramic-polymers, composites- Source, application, advantage and limitations	6
<b>MODULE II:</b> Metals and alloys-Stainless Steels, CO-based alloys, Ti and Ti based alloys and dental metals corrosion and remedy, Ceramics-Aluminum oxides, calcium phosphate, glass-Ceramics, carbon manufacturing and physical properties, deterioration of ceramics	10
<b>MODULE-III</b> Polymeric implant materials-polyamides, PE, PP, Polyacrylates, Structure, properties and application of biological materials-proteins, polysaccharides, Structure and property relation of Tissues-Mineralized tissues, collagen rich tissues and elastic tissues	8
<b>MODULE - IV</b> Soft tissue replacements-Skin implants-sutures, tissue adhesives, percutaneous devices, artificial skins, maxillofacial implants, ear and eye implants, vascular implants, heart and lung assist devices, artificial kidney dialysis membranes	8
<b>MODULE V</b> Hard tissue replacements-long bone repair-wires, pins, screws, fracture plates, tooth implants, joint replacement-knee and hip joint-materials of construction, limitations	8

### Text Books:

1. Biomaterials-An Introduction-J.B. Park & Roderic S. lakes, Springer Science and Business Media, LLC, New york, 1992
2. Plastic Materials, J. A. Brydson, ISBN-13: 978-0750641326, ISBN-10: 0750641320, Butterworth Heinemann, 7<sup>th</sup> Edition, Oxford

### Reference books:

1. Fundamentals of Polymer Science: Kumar Anil & Gupta R.K. Mc Graw Hill, 1998.
2. The Element of Polymer Science & Engineering: Rudin.
3. Introduction to Polymer Science 3<sup>rd</sup> edition, L.H. Sperling, John Wiley and Sons 2001.

### Gaps in the syllabus (to meet Industry/Profession requirements)

- Testing procedure of biocompatibility, tissue compatibility and cytotoxicity of biomaterials are not included in the syllabus

### POs met through Gaps in the Syllabus:

PO11, PO9, PO2

### Topics beyond syllabus/Advanced topics/Design

- Testing procedure of biocompatibility, tissue compatibility and cytotoxicity of biomaterials may be included in the syllabus

### POs met through Topics beyond syllabus/Advanced topics/Design

PO2, PO3 and PO4

## COURSE INFORMATION SHEET

<b>Course code:</b>	<b>CL336</b>
<b>Course title:</b>	<b>Rubber Product Technology</b>
<b>Pre-requisite Flow chart:</b>	
<b>Co- requisite(s):</b>	
<b>Credits:</b>	L: 03 T: 00 P: 00
<b>Class schedule per week:</b>	<b>03</b>
<b>Class:</b>	<b>B. Tech</b>
<b>Semester / Level:</b>	<b>3<sup>rd</sup> year</b>
<b>Branch:</b>	<b>Chemical Engineering (Plastics &amp; Polymer)</b>
<b>Name of Teacher:</b>	

### Course Objectives

This course enables the students to:

1.	Understand the knowledge on industrially available elastomers synthesis and characteristics.
2.	Remember the use of chemical additives and will be able to select appropriate materials for a given application.
3.	Understand the elastomer processing operations and choice of operation depending on the material and final product requirements
4.	Analyze the select of vulcanizing agents and the process of vulcanization for various product profile
5.	Understand the elastomer based product manufacturing technology.

### Course Outcomes

After the completion of this course, students will be:

CO 336.1	Remember: Remembering the use of chemical additives, and will be able to select appropriate materials for a given application
CO 336.2	Understand: Understand the knowledge on industrially available elastomers synthesis and characteristics
CO 336.3	Apply: Apply most modern technology to modify the process variables on existing machine to manufacture a specific rubber/composite product.
CO336.4	Analyze: Analyze the select of vulcanizing agents and the process of vulcanization for various product profile
CO 336.5	Evaluate: Able to develop elastomer product with defined structural properties

## Syllabus

MODULE	No. of Lecture Hours
<b>Module1</b> History and growth of rubber technology, general consideration of diene polymers, Physics of raw vulcanised rubber, Natural rubber, Chemistry and technology of synthetic rubbers - SBR, nitrile, polybutadiene, polychloroprene, EVA, EPDM, Butyl rubber, silicones, TPEs.	<b>8</b>
<b>Module2</b> Rubber compounding and mixing, Mastication, Additives - fillers, accelerators, activators, antioxidants, antiozonants, sulphur etc. Mechanism and practice of sulphur vulcanization and non-sulphur, vulcanization (peroxide, metal oxides and other special curing systems) Machineries: Two roll Mill, Mixers, Extruders, Calendars, Testing equipments: mooney viscometer, oscillating disc rheometer.	<b>10</b>
<b>Module3</b> Manufacturing of Dipped goods from latex, latex foam, Latex thread, latex treated coir. Rubber coated fabrics, Rubber footwear technology.	<b>7</b>
<b>Module4</b> Using textile, leather, PVC. Extruded rubber profile. Hose technology, conveyor & V- Belt., Rubber covered rolls, metal rubber bonding. Thermoplastic Elastomer & its potential application, reverse engineering in rubber industries.	<b>7</b>
<b>Module 5</b> Tyre technology: Classification, Compounding, processing, application, rubber cables description, Materials used-resin, reinforcement, Classification, Machinery, defects, remedies classification.	<b>8</b>

## LABORATORIES

### COURSE INFORMATION SHEET

<b>Course code</b>	<b>CL 315</b>
<b>Course title</b>	<b>Polymer Technology Lab-1</b>
<b>Pre-requisite(s)</b>	<b>PH113,CH101,CH102,CL213</b>
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: T: 0 P: 2
<b>Class schedule per week</b>	3
<b>Class</b>	B. Tech.
<b>Semester / Level</b>	<b>VI/Third</b>
<b>Branch</b>	Chemical Engineering(Plastics & Polymer)
<b>Name of Teacher</b>	Prof. S.Goswami,Dr.P.Datta

#### Course Objectives

This course enables the students:

1	Understanding: to explain the types and kinetics of synthesis reactions of various polymers
2	Apply: to identify the compounding ingredients to be used in specific plastic compounding for specific end use
3	Analyze: to make use of knowledge of structure /properties relationship of polymers while selecting them for specific product manufacturing
4	Compose: to write down the recipe of a specific polymer compound suitable for specific application
5	Design: To design the processing steps on specific equipment when a given product is desired to manufacture

#### Course Outcomes

After the completion of this course, students will be able to:

CO315.1	Remember: Recall the preparation, properties and application of various commodity and engineering plastics.
CO315.2	Understand: Explain preparation, properties and application of commodity plastics.
CO315.3	Apply: Apply the knowledge of structure property relationship to choose the materials for various applications.
CO315.4	Analyze: Categorize the methods of the preparation and characterize polymers in

	respect of properties
CO315.5	Evaluate: Select additives for different plastics and formulate recipe for specific product manufacturing and compare the properties of various compounds with the variation of specific ingredient

## SYLLABUS

List of Experiments	(No. of hours per week)
1. Preparation of general purpose insulating Compound based on PVC and study of mechanical, thermal & morphological properties	3
2. Determination of K value of PVC & Determination of Plasticizer absorption capacity of it	3
3. Preparation of FRP sheets of different fibre loading	3
4. Preparation of thermoset (PF) sheets by compression moulding	3
5. Identification of raw rubber by chemical method	3
6. Determination of volatile matter, ash content and dirt content of a given raw NR and a vulcanized NR sample	3
7. Synthesis of PMMA by bulk polymerization and determination of molecular weight by viscometry	3
8. Preparation of Novolac resin and characterization of it	3
9. Study of kinetics of condensation polymerization of unsaturated polyester	3
10. Synthesis of acrylamide grafted cellulose and characterization of it	3

### **Text Books:**

1. Text book of Polymer Science: Billmeyer F.W., 3rd Edn., Wiley Interscience, 1984
2. Principles of polymerization: G. Odian, 2nd Edn. Wiley Interscience New York, 1981
3. Flow properties of polymer Melts, J.A. Brydson, Godwin in association with the Plastics and Rubber Institute, 2<sup>nd</sup> Edn. 1981, ISBN071145681X, 9780711456815
4. Plastic Materials, J.A. Brydson, ISBN-13: 978-0750641326, ISBN-10: 0750641320, Butterworth Heinemann, 7<sup>th</sup> Edition, Oxford

### **Reference books:**

1. Fundamentals of Polymer Science: Kumar Anil & Gupta R.K. McGraw Hill, 1998.
2. The Element of Polymer Science & Engineering: Rudin.
3. Introduction to Polymer Science 3<sup>rd</sup> edition, L.H.Sperling, John Wiley and Sons 2001.

**Gaps in the syllabus (to meet Industry/Profession requirements)**

Industrial visit during the laboratory hours may be arranged so that students may get exposure to actual processes followed in the industry and compare the same with the lab scale experiments done in the class

**POs met through Gaps in the Syllabus:**

PO11,PO9,PO2

**Topics beyond syllabus/Advanced topics/Design**

Study on design of processing equipment is not included in syllabus

**POs met through Topics beyond syllabus/Advanced topics/Design**

PO2, PO3 and PO4

**Course Outcome (CO) Attainment Assessment tools & Evaluation procedure**

**Direct Assessment**

Assessment Tool	% Contribution during CO Assessment
(1) Progressive Evaluation	60
(2) End Semester	40

CD9	Simulation		

## COURSE INFORMATION SHEET

**Course code:** CL311  
**Course title:** Chemical Engineering Lab III  
**Pre-requisite(s):**  
**Co- requisite(s):**  
**Credits:** 2 (L: 0 T: 0 P: 4)  
**Class schedule per week:** 4  
**Class:** B. Tech.  
**Semester / Level:** VI / Third  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives:

This course enables the students to:

1.	Plan experiments, make appropriate measurements, analyze the data and report the results.
2.	Apply theoretical concepts for data analysis and interpretation.
3.	Learn to operate equipments/instruments.
4.	Develop experimental skills.
5.	Examine the theory through experiments

### Course Outcomes

After the completion of this course, students will be able to:

CO311.1	Learn to employ various methods to determine the kinetics of reactions.
CO311.2	Quantify the effects of non-ideality of flow in chemical reactors.
CO311.3	Estimate physical parameters of different types of fuels.
CO311.4	Analyse the experimentally derived quantities with estimates from correlations/models discussed in the related theory courses.
CO311.5	Evaluate errors in measurements and assess the result.

## LIST OF EXPERIMENTS:

---

Sl. No.	Description
1	To study a non-catalytic homogeneous reaction in an isothermal batch reactor.
2	To study a non-catalytic homogeneous reaction in a coil tube type plug flow reactor under isothermal conditions.
3	To study a non-catalytic homogeneous reaction in a CSTR under isothermal conditions.
4	To study the performance of a cascade of three equal volumes CSTR's in series.
5	RTD studies in a CSTR.
6	RTD studies in PFR.
7	Characterization of coal - I (Proximate Analysis&Bomb Calorimeter).
8	Commercial viscometer - Redwood I, Redwood II, Engler, Saybolt.
9	Flashpoint by Cleaveland Open Cup, Pensky Martin Closed Cup, Abel Closed cup.
10	Solar Energy – photovoltaic.
11	Solar Energy - Thermal energy.
12	Energy storage by phase change material.
13	ASTM distillation of petrol and characterization of diesel.

---

## PROGRAMME ELECTIVE - III

### COURSE INFORMATION SHEET

<b>Course code:</b>	CL411
<b>Course title:</b>	Polymer Technology
<b>Pre-requisite:</b>	PH113, CH101, CH102, CL213
<b>Co- requisite(s):</b>	Programme Elective-III to BE Chemical Engineering students
<b>Credits:</b>	L: 03 T: 00 P: 00
<b>Class schedule per week:</b>	03
<b>Class:</b>	B. Tech
<b>Semester / Level:</b>	07/04
<b>Branch:</b>	Chemical Engineering
<b>Name of Teacher:</b>	

#### Course Objectives:

This course enables the students to:

1.	Understanding: to explain the types and kinetics of synthesis reactions of various polymers
2.	Apply: to identify the compounding ingredients to be used in specific plastic compounding for specific end use
3.	Analyze: to make use of knowledge of structure /properties relationship of polymers while selecting them for specific product manufacturing
4.	Compose: to write down the recipe of a specific polymer compound suitable for specific application
5.	Understand the physical and chemical characterization of polymeric raw materials.

#### Course Outcomes:

After the completion of this course, students will be able to:

CO.411.1	Remember: Recall the preparation, properties and application of various commodity and engineering plastics.
CO.411.2	Understand: Explain preparation, properties and application of commodity and engineering plastics.
CO.411.3	Apply: Apply the importance of structure property relationship to choose the materials for various applications.
CO.411.4	Analyze: Categorize the methods of the preparation, properties and application of specific copolymers.
CO.411.5	Evaluate: Select additives for different plastics and formulate recipe for specific product manufacturing

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1: Fundamental concept of Macromolecules</b> -Classification of polymer, Polymer structure property relationship, Molecular forces and chemical bonding in polymer, Glassy to rubber transition in polymer, Concept of Molecular weight and Molecular weight distribution for polymers, Determination of average molecular Weight by viscometry, Gel permeation Chromatography	6
<b>Module 2:Types of polymerization</b> - Principles of Step-reaction (condensation) polymerization, Carothers Equation, Mechanism of stepwise polymerization, Kinetics and statistics of linear stepwise polymerization, Polyfunctional step-reaction polymerization, Gel point, Principles of radical chain (addition) polymerization. Initiators and initiator systems, Kinetics of vinyl radical polymerization, initiator efficiency, cage effect	10
<b>Module 3:</b> AdditivesforPlastics:Definition,classification,mechanismofaction:fillers, couplingagents, plasticizer, cross linkingagents, stabilizer, blowingagents	8
<b>Module 4:</b> Structure and property relation of Polyethylene,(LDPE, HDPE, LLDPE, XLPE, UHMHDEP), Polytetrafluoroethylene,Polypropylene, Polystyrene, Polyvinyl chloride,Polyvinyl alcohol, Acrylics, nylon 6,nylon66, Phenol-formaldehyde resins, alkyl & aryl epoxies, polyurethanes, silicones, Unsaturated Polyester	10
<b>Module 5:</b> Crystal structure of polymer, Morphology of crystalline polymer, Crystallization and melting, Strain induced morphology, Mechanical properties of crystalline polymer, Viscous flow, Kinetic theory of rubber elasticity. Viscoelasticity, melt flow Index, die swell, viscoelastic models, principles of cone and plate rheometer	6

## COURSE INFORMATION SHEET

<b>Course code:</b>	CL412
<b>Course title:</b>	COLLOID AND INTERFACIAL ENGINEERING
<b>Pre-requisite(s):</b>	Elective Course after VIth semester. To have undertaken a course In chemical thermodynamics and a basic physical chemistry.
<b>Credits:</b>	L:03 T:00 P:00
<b>Class schedule per week:</b>	03
<b>Class:</b>	B. TECH.
<b>Semester / Level:</b>	07/04
<b>Branch:</b>	Chemical Engineering
<b>Name of Teacher:</b>	

### Course Objectives:

This course enables the students to:

1.	Remember: Define the chemical structure of different surfactants
2.	Understand: Describe the different intermolecular forces in colloidal system
3.	Apply: Illustrate the method of measurement of surface and interfacial tension
4.	Analyse: Analyse the intermolecular forces for a given system
5.	Evaluate: Given a set o specification formulate the system

### Course Outcomes:

After the completion of this course, students will be able to:

CL412.1	Remember: Define the preparation and properties of colloidal system
CL412.2	Understanding: Illustrate the different intermolecular forces in colloidal system.
CL412.3	Applying: Identify the method of measurement for given colloidal system.
CL412.4	Analyzing: Illustrate the stability of the given colloidal system.
CL412.5	Evaluating: Recommend a suitable compositions for specific application.

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Introduction to colloidal material, surface properties, origin of charge on colloidal particles, preparation & characterization of colloidal particles. Measurement of Zeta potential.	5
<b>Module 2:</b> Theory of surfactants. Surfactants type (Anionic, cationic, Zwitterionic, Gemini and non-ionic). CMC. Kraft temperature. Surfactant geometry and packing. Phase behavior of concentrated surfactant systems. Emulsions, Microemulsions & Gels. Foams and Flotation.	7
<b>Module 3:</b>	8

Intermolecular Forces, Van-der-waals forces (Kessorn, Debye, and London Interactions). Potential energy curve, Brownian motion and Brownian Flocculation. Electrical phenomena at interfaces (Electronic kinetic phenomena, Electric double layer, short range forces). DLVO theory, capillary hydrostatics . thin film. Electro osmosis phenomena, Streaming potential, Electro viscous flows.	
<b>Module 4:</b> Measurements of Surface tension and Interfacial Tension. Surface tension for curved interfaces. Surface potential between two flat surfaces. Surface potential between one flat and one curve surfaces, Surface excess and Gibbs equation,	6
<b>Module 5:</b> Contact angle and its measurement, Wetting, Young-Laplace equation, Dynamic properties of interfaces. Surface viscosity, Kelvin equation. Adhesion, wetting, nucleation, flotation, patterning of soft material by self – organization and other techniques	9

## COURSE INFORMATION SHEET

<b>Course code</b>	CL413
<b>Course title</b>	Fundamental of Molecular Simulation
<b>Pre-requisite(s)</b>	Chemistry, Physics, Calculus, Numerical Methods in Chemical Engineering
<b>Co-requisite(s)</b>	
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. TECH.
<b>Semester / Level</b>	
<b>Branch</b>	Chemical engineering
<b>Name of Teacher</b>	

### Course Objectives:

This course enables the students to:

1.	Understand the basics of statistical mechanics and quantum chemistry.
2.	Explain the working knowledge of Molecular Simulations.
3.	Acquainted a broad overview of various simulation techniques.
4.	Learn current and relevant applications in molecular modelling and simulation.
5.	Develop student's computational programming skills.

### Course Outcomes:

After the completion of this course, students will be able to:

CO.413.1	Explain the basics of statistical mechanics and molecular simulation.
CO.413.2	Apply the Density Functional Theory to Optimize the Geometry of Molecules.
CO.413.3	Explain the basics of Monte Carlo/Molecular Dynamics Simulation.
CO.413.4	Develop Simple Monte Carlo Simulation Code.
CO.413.5	Develop Simple Molecular Dynamics Code.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1: Ab-initio Methods and Statistical Mechanics</b> Ab-initio Methods, The Born-Oppenheimer Approximation, Basis Set, Hartree-Fock Theory, Density Functional Theory, Geometry Optimization. Basics of Statistical Mechanics, Boltzmann Energy Distribution, Partition Functions.	8
<b>Module 2: Monte Carlo Simulation</b> Introduction to Monte Carlo, Monte Carlo Integration, Periodic Boundary Conditions, Equilibrations, Monte Carlo Sampling, Markov Process and its applications, Metropolis Sampling, Principles of Detailed balance.	8
<b>Module 3: Monte Carlo Simulation in Various Ensembles</b> Simulation Strategy, NVT Ensemble, NPT Ensemble, NVE Ensemble, Grand Canonical Ensemble, Gibbs Ensemble.	8
<b>Module 4: Molecular Dynamics Simulation</b> Basics of Molecular Dynamics Simulation, Force Field, Integrating Algorithms, Periodic Box and Minimum Image Convention, Long Range Forces, Non-Bonded Interaction, Simple Molecular Dynamics Program.	8
<b>Module 5: Molecular Dynamics Simulation</b> Temperature Control, Pressure Control, Estimation of Pure Component Properties, Radial Distribution Function, Molecular Dynamics Packages.	8

CD3	Seminars	CO3	CD1, CD2, CD8
CD4	Mini projects/Projects	CO4	CD1, CD2, CD8
CD5	Laboratory experiments/teaching aids	CO5	CD1, CD2, CD8
CD6	Industrial/guest lectures		
CD7	Industrial visits/in-plant training		
CD8	Self- learning such as use of NPTEL materials and internets		
CD9	Simulation		

## COURSE INFORMATION SHEET

<b>Course code</b>	CL414
<b>Course title</b>	Fertilizer Technology
<b>Pre-requisite(s)</b>	Process Technology
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. E.
<b>Semester / Level</b>	VII
<b>Branch</b>	Chemical engineering
<b>Name of Teacher</b>	

### Course Objectives

This course enables the students to:

1.	Understand the plant nutrients and different types of inorganic chemical fertilizers and organic manures.
2.	Learn the concepts of production technology of nitrogenous, phosphatic, potash, NPK fertilizers.
3.	Apply the knowledge of various fertilizer application methods and recent advances in fertilizer technology.
4.	Analyze the physical and chemical properties of various fertilizers.
5.	Describe the most recent fertilizer production technologies.

### Course Outcomes

After the completion of this course, students will be able to:

CO414.1	Describe the basic concept of fertilizer industries.
CO414.2	Explain the principles and technology of production of fertilizers.
CO414.3	Analyze fertilizers on the basis of different properties.
CO414.4	Choose appropriate fertilizer and application methods.
CO414.5	Describe the concepts of nanofertilizers and biofertilizers.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Introduction to Chemical inorganic Fertilizers and Organic manures. plant nutrients; Introduction to important types of fertilizers: nitrogenous, phosphate, potassium, NPK, Mixed, complex, compound and others	8
<b>Module 2:</b> Nitrogenous fertilizers: Feedstock for production of Ammonia, methods of production, Characteristics; Production of ammonium sulphate, ammonium chloride; ammonium nitrate, Urea, calcium ammonium nitrate;	8
<b>Module 3:</b> Phosphatic fertilizers: Raw materials; Methods of production of single super phosphate, triple super phosphate; specifications, storage and applications; Potassium fertilizers: Methods of production, Characteristics, Specification and storage of potassium chloride, potassium sulphate and potassium nitrate	8
<b>Module 4:</b> Ammonium phosphate fertilizers: Production, Characteristics, Specification and storage of MAP, DAP, Urea ammonium phosphate; NPK fertilizers: Types, production and storage	8
<b>Module 5:</b> Secondary nutrients, Micro nutrients; Recent advances: Fluid fertilizers, Controlled release fertilizers; nanofertilizers, biofertilizers and others; Fertilizer application methods; Fertilizer Industry in India.	8

### TEXT BOOK:

1. Francis T. Nielsson, Manual for Fertilizer Processing, CRC press, 1986
2. Collings, G.H., Commercial Fertilizers, 5th Edn., McGraw Hill, New York, 2001.

### Reference Books:

1. Handbook of fertilizer technology, The Fertilizer Association of India, New Delhi, 2002.
2. Slacks, A.V., Chemistry and Technology of Fertilizers, Interscience, New York, 1966.

### Gaps in the syllabus (to meet Industry/Profession requirements)

Formulation and compounding of fertilizers with specific plant and soil requirements

### POs met through Gaps in the Syllabus

PO2, PO3, PO4, PO7 and PO8

### Topics beyond syllabus/Advanced topics/Design

More detailed concepts and recent advances of natural organic fertilizers, Studies on special fertilizer application methods, formulating fertilizers for specific plant and soil requirements

### POs met through Topics beyond syllabus/Advanced topics/Design

PO2, PO3, PO4, PO7, PO8, PO9 and PO12

## Course Outcome (CO) Attainment Assessment tools & Evaluation procedure

### Direct Assessment

Assessment Tool	% Contribution during CO Assessment
First Quiz	10
Mid Semester Examination	25
Second Quiz	10
Teacher's Assessment	5
End Semester Examination	50

### Indirect Assessment –

1. Student Feedback on Course Outcome

### Mapping of Course Outcomes onto Program Outcomes

Course Outcome	Program Outcomes (POs)												Program Specific Outcomes (PSOs)

CD9	Simulation		

## COURSE INFORMATION SHEET

<b>Course code:</b>	CL415
<b>Course title:</b>	Polymer Blends and Alloys
<b>Pre-requisite:</b>	PH113,CH101,CH102,CL213
<b>Co-requisite(s):</b>	The course is to be offered as Programme elective -III
<b>Credits:</b>	L: 03 T: 00 P: 00
<b>Class schedule per week:</b>	03
<b>Class:</b>	B. Tech
<b>Semester / Level:</b>	07/04
<b>Branch:</b>	Chemical engineering
<b>Name of Teacher:</b>	

### Course Objectives:

This course enables the students to:

1.	Remembering: Recall limitations of polymers, make a list of modification techniques and define blending of polymers
2.	Understanding: Classify blends and IPNs, illustrate types in practical use and summarise characterization methods of blends
3.	Evaluate :Compare the polymer blends with virgin polymers and alloys, Justify the blend composition in terms of properties
4.	Apply the concepts of most modern technology to modify the blend composition as per the requirements.
5.	Design projects related to development of novel products

### Course Outcomes:

After the completion of this course, students will be able to:

CO415.1	Remembering: Choose the specific polymer for blend preparation through specific method for specific end use
CO415.2	Analyze : Identify the defects in plastic products and interpret the product quality in terms of machine parameters and blend composition -suggest professional engineering solutions as remedies which will be sustainable and economical
CO415.3	Evaluate: Compare the blend properties with original raw polymer properties to show the improvement due to blending
CO415.4	Apply : Apply most modern technology to modify the blend composition by existing machine to manufacture a specific product
CO415.5	Create: optimize the blend ratio and compounding recipe, handle projects related to development of novel products

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>MODULE- I</b> Polymer Blends: Definition, difference between polymer blends and alloys, classification of polymer blends and alloys, principle of polymer compatibility, miscibility effect of molecular structure on polymer-polymer interaction, thermodynamics of polymer-polymer mixing	10
<b>MODULE II:</b> Preparation of Polymer Blends & Alloys (PBA): Latex, Solution, Melt, Mechanochemical blending, Reactive blending,	6
<b>MODULE-III</b> Commercial blends and applications - toughened polymers, LCP blends, high performance engineering polymer blend	8
<b>MODULE - IV</b> Interpenetrating Polymer Networks-type of blends and alloys-classification, preparation, Relation between blends, IPNs, graft copolymers and composites. Polymer concrete - fabrication, properties, applications	10
<b>MODULE V</b> Characterization of polymer blends- estimation of mechanical and thermal properties of blends Effect of composition of the blends on blend morphology	6

### Text Books:

1. Polymer Alloys and Blends: Thermodynamics and Rheology, Utracki, L.A. Hanser, 1990
2. Plastic Materials, J. A. Brydson, ISBN-13: 978-0750641326, ISBN-10: 0750641320, Butterworth Heinemann, 7<sup>th</sup> Edition, Oxford
3. Polymer Blends; Paul, D.R. and Newman S. Academic Press, 1998

### Reference books:

1. Polymer Blends and Alloys: Shaonaike, G.O. & Simon G.P. Marcel Dekker, 1999
2. Commercial Polymer Blends and Ionomers: Utracki, L.A., ACS, Symposium Series, 1988

### Gaps in the syllabus (to meet Industry/Profession requirements)

- Testing procedure of polymer blend properties are not included in the syllabus

### POs met through Gaps in the Syllabus:

PO11, PO9, PO2

### Topics beyond syllabus/Advanced topics/Design

- Testing procedure of polymer properties are not included in the syllabus

### POs met through Topics beyond syllabus/Advanced topics/Design

PO2, PO3 and PO4

## Course Outcome (CO) Attainment Assessment tools & Evaluation procedure

### Direct Assessment

## COURSE INFORMATION SHEET

**Course code:** CL416  
**Course title:** Paints and Surface Coating  
**Pre-requisite(s):**  
**Co-requisite(s):**  
**Credits:** L:03 T:00 P:00  
**Class schedule per week:** 03  
**Class:** B. TECH.  
**Semester / Level:** 07  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives:

This course enables the students to:

1.	Remembering: Identify the properties of paints
2.	Understanding: Explain the method of surface preparation for paint application
3.	Applying: Describe the basic principles of paint formulations.
4.	Analyze: Illustrate the preparation of paints
5.	Evaluate: Given a type of specifications formulate a paint system and Evaluate its properties

### Course Outcomes

After the completion of this course, students will be able to:

CL416.1	Remembering: Define paints, lacquers, varnish, surface coating
CL416.2	Understanding: Describe the properties of binder, pigments, solvents and other additives
CL416.3	Applying: Basic understanding of designing paint formulation considering various ingredients .
CL416.4	Analyse: Given a type of paint defects examine the cause of failure and provide the necessary corrective actions.
CL416.5	Evaluate: Evaluate the quality of applied coating and suggest preventive measures

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Fundamental types of surface coating: Lacquer, paint, varnish, and enamel. Mechanism of film formation. Solvents, Thinners and Diluents properties and its functions in paint system. Toxicity and Environment Pollution. Solvent selection.	6
<b>Module 2:</b> Non reactive binder: Acrylics, esters, vinylic etc. Reactive binder: Oleo	5

resinous binder - (drying oil, semi drying oil, non-drying oil). Epoxy resins. Phenolic resins. Urethane resins. Melamine Formaldehyde resins.	
<b>Module 3:</b> Pigment properties and its role in paint system. White Inorganic pigments. Colour Inorganic pigments. Specialty pigments. Organic pigments. Extenders. Theory of pigment dispersion in paints. Paint formulations.	8
<b>Module 4:</b> Surface preparation for metals. Surface preparation for woods. Surface preparation for plastics. Spray coating. Electro deposition. Brush coating, Dip coating. Electro deposition. Water borne coating. Powder coating. Radiation curable coating. Marine coating. Can coating.	11
<b>Module 5:</b> Additives for paints. Industrial paint making processes. Quality control of dispersion and storage. Mechanical properties of coatings. Quality control of finished products. Type of coating defects. Reasons for coating defects. Type of printing inks. Manufacturing of printing inks. Drying of printing inks.	10

### **Text Books:**

**PROGRAMME ELECTIVE-IV**  
**COURSE INFORMATION SHEET**

Course code: CL421  
Course title: Fine Chemical  
Pre-requisite(s):  
Co- requisite(s):  
Credits: L:3 T:0 P:0  
Class schedule per week: 3  
Class: B. Tech.  
Semester / Level:  
Branch: Chemical Engineering  
Name of Teacher:

**Course Objectives:**

This course enables the students to:

1.	Acquire the knowledge of the fine chemicals and high value chemicals.
2.	Learn the aspects of synthesis of fine chemicals.
3.	Acquire the knowledge of pharmaceutical industry.
4.	Describe the reactor technology and scale-up for fine chemical processes.
5.	Explain the specialized separation techniques and novel interventions in the fine chemicals industry.

**Course Outcomes:**

After the completion of this course, students will be able to:

CO.421.1	Classify fine chemical industries.
CO.421.2	Describe homogeneous and heterogeneous catalysis and catalysts used for various fine chemicals processes.
CO.421.3	Model reactor and micro reactors for fine chemicals production.
CO.421.4	Describe the key unit operations involving fine chemical processes.
CO.421.5	Illustrate process creation and optimization for fine chemical products.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
Overview of fine chemicals technology, distinguishing features, historical perspectives, examples. Classification of fine chemical industry: based on sources: chemical (petrochemicals and natural products), and biotechnology routes (enzymatic methods, fermentation and cell culture technology); Extraction of fine chemicals from natural sources	6
Catalysis in fine chemicals: homogeneous and heterogeneous catalysis, phase transfer catalysis; Improvement of selectivity using micromixing, emulsions, zeolites, photochemistry, sonication etc.	8
Basic reactor modeling, microreactors and process intensification	8
Enrichment and separation methods: extraction, phase separation, centrifugation, filtration, crystallization, chromatography, Scale up of unit operations: scaling principles for key unit operations, scale related issues. Process design and optimization - integration of different unit operations, continuous processing, process targets and creation of an optimized process that achieves those targets	12
Manufacturing aspects - utilities, safety, good manufacturing practices, raw material handling, equipment and facility related issues Case studies - Illustration of process creation and optimization for two fine chemical products	6

## COURSE INFORMATION SHEET

<b>Course code:</b>	<b>CL422</b>
<b>Course title:</b>	<b>Polymer Composite</b>
<b>Pre-requisite(s):</b>	
<b>Co- requisite(s):</b>	<b>Nil</b>
<b>Credits:</b>	<b>L: 03 T: 00 P: 00</b>
<b>Class schedule per week:</b>	<b>03</b>
<b>Class:</b>	<b>B. Tech</b>
<b>Semester / Level:</b>	<b>04</b>
<b>Branch:</b>	<b>chemical engg/ Chemical Engineering- Plastics and Polymer</b>
<b>Name of Teacher:</b>	

### Course Objectives

This course enables the students to:

1.	Impart the fundamentals of polymer composites and its applications.
2.	Know about manufacture, properties and application of polymer and fibre.
3.	Explain the basic properties, characteristics and constituents of composite materials
4.	Present and apply the different fabrication processes for composite materials, including bonding, fastening, laminating, and finishing techniques
5.	Perform design, construction, and fabrication of laminate parts. Define and use appropriate terminology as it relates to composite structure design and manufacturing

### Course Outcomes

After the completion of this course, students will be able to:

CO 422.1	Remember: Classify the different type of polymeric composites and its applications.
CO 422.2	Understanding: Ability to select the process for fabrication of polymer composites.
CO 422.3	Applying: Select different types of matrix and reinforcement materials.
CO 422.4	Analysing: Relate theoretical knowledge with typical products and its stress – strain behavior.
CO 422.5	Evaluate: Aware of different testing and characterization of polymer composites.

## Syllabus

MODULE	No. of Lecture Hours
Module1 Polymer composite systems: Types of composites, reinforcements, Types of Resin..	8
Module2 Natural fibre: Jute, sisal, cotton, hemp ceramic fibre: silicon carbaide, zinc, Alumina, glass,synthetic fibre: polyethylene, polyester, nylon, Kevlar etc.	8
Module3 Thermoset, elastomer - resins (polyesters, epoxide, vinyl ester, phenol formaldehyde, polyimide, reinforced polyolefin, Semicrystalline and amorphous polymers - PEEK, PP, PEK, PBT, PC, ABC, nylon etc.) additives, reinforcements (particulate, fibrous, gaseous).	8
Module4 Processing techniques - open mould, hand lay up spray up, vacuum bag moulding, pressure bag moulding, autoclave moulding, closed mould, SMC, DMC, RTM., Continuous manufacturing process - pultrusion, filament winding, centrifugal casting. Application (sandwich constructions - aircraft, racing cars, helicopter rotor blades etc.)..	8
Module 5 Mechanical behaviour of composites – Analysis of continuous fibre composites, and shortfibre composites. Deformation behaviour of single ply and laminates. Creep, Fatigue Impact. Electrical,and thermal properties..	6

## COURSE INFORMATION SHEET

<b>Course code</b>	CL423
<b>Course title</b>	Membrane Science and Technology
<b>Pre-requisite(s)</b>	Fluid Mechanics, Mass Transfer, Thermodynamics
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: 3    T: 0    P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. Tech.
<b>Semester / Level</b>	VII
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

### Course Objectives

This course enables the students to:

1.	Learn basic principles of membrane science and technology.
2.	Explain basics of membrane transport and related mechanism.
3.	Describe membrane structure and their formation processes.
4.	Acquire knowledge on Membrane based Separation Processes.
5.	Design the suitable membrane separation techniques for intended problems.

### Course Outcomes

After the completion of this course, students will be able to:

CO.423.1	Explain Membrane Processes and Types of Membranes.
CO.423.2	Explain the Membrane Preparation Methods and Membrane Characterization Techniques.
CO.423.3	Explain the Principles and application of different Membrane processes and their characteristics.
CO.423.4	Develop skills to choose appropriate membrane process for a specific application.
CO.423.5	Explain the principles and applications of advanced membrane separation processes.

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Basic Principle of Membrane Separation, Classification of Membrane Processes, Advantages and Disadvantages of Membrane Processes, Major Areas of Application. Types of Synthetic Membranes- Micro porous (Isotropic and Anisotropic), Asymmetric, Thin film composite, Electrically Charged, Inorganic. Membrane Modules, Typical Flow Patterns, Membrane Materials,	8

<p>Pore Characteristics. General Methods of Membrane Manufacture – Phase Inversion Process, Track-etch method, Sol-gel Peptisation Method, Interfacial Polymerization, Melt Pressing, Film Stretching, Template Leaching, Preparation of Ion-exchange Membranes. Characterisation of porous membranes-Electron microscopy, Atomic force microscopy, Bubble-point method, Bubble-point with gas permeation, Mercury intrusion method, Permeability method, Gas Adsorption-Desorption, Thermoporometry, Permporometry, Liquid displacement, Solute rejection measurements. Characterisation of nonporous membranes- Permeability methods, Physical methods (DSC/DTA methods), Plasma Etching, Surface Analysis methods.</p>	
<p><b>Module 2:</b> Reverse Osmosis: Concept of Osmosis, Phenomenon of Reverse Osmosis, Membrane Materials and Modules, Models for Reverse Osmosis Transport, Design and Operating Parameters, Concentration Polarization, Membrane Plugging, Design of an RO Module, Reverse Osmosis for Non-Aqueous System, Forward Osmosis. Nanofiltration: Principle of Nanofiltration, Nanofiltration Membranes, Mass Transfer in Nanofiltration, Process Limitations, Industrial Applications</p>	8
<p><b>Module 3:</b> Ultrafiltration: Basic Principle of Ultrafiltration, Ultrafiltration Membranes (Membrane Modules and Characterisation), Configuration of UF Unit, Factors affecting the performance of Ultrafiltration, Flux Equation for Ultrafiltration, Models for solvent Flux, Fouling and Flux Decline, Methods to Reduce Concentration Polarization, Micellar-enhanced Ultrafiltration, Affinity Ultrafiltration. Microfiltration: Basic Principle of Microfiltration, Microfiltration Membranes, Mechanism of Transport, Retention Characteristics, Flow Characterisation, Fouling in MF Membranes.</p>	8
<p><b>Module 4:</b> Principle of Dialysis, Dialysis Systems, Dialysis Membranes, Mass Transfer in Dialysis, Hemodialysis. Ion Exchange Membrane Processes: Basic Principle, Ion Exchange Membranes, Batch and Continuous Electrodialysis, Electrodialysis Reversal, Electrodeionization.</p>	8
<p><b>Module 5:</b> Gas Separation: Basic Principle, Membranes for Gas separation, Membrane Modules, Mechanism of Gas Transport-Knudsen Diffusion, Molecular Sieving, Solution-Diffusion, Dual Sorption Model, Factors affecting Gas Permeation. Pervaporation- Basic Principle, Advantages, Mass Transfer in Pervaporation, Design of a Pervaporation Module, Factors Affecting Pervaporation. Liquid Membranes: Bulk Liquid Membranes, Emulsion Liquid Membranes, Thin Sheet Supported Liquid Membranes, Hollow Fibre Supported Liquid Membranes, Polymer Inclusion Membrane, Mechanism of Mass Transfer. Facilitated Transport: Mechanism of Facilitated Transport, Coupled Transport, Active and Passive Transport, Applications of Facilitated Transport.</p>	8

## COURSE INFORMATION SHEET

**Course code:** CL424  
**Course title:** Microfluidics  
**Pre-requisite(s):**  
**Co- requisite(s):**  
**Credits:** L:03 T:00 P:00  
**Class schedule per week:** 03  
**Class:** B. Tech.  
**Semester / Level:**  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives

This course enables the students to:

1.	Define the basics of microfluidics.
2.	Describe the behaviour of fluids in Microsystems.
3.	Explain the operating principles and physical mechanism unique to microfluidics.
4.	Explain different technological and scientific applications of microfluidics technology.
5.	Demonstrate an understanding of scaling of fundamental dynamics in microfluidic systems.

### Course Outcomes

After the completion of this course, students will be able to:

CO.424.1	Explain the theory and physical principles of fluid mechanics on the microscale.
CO.424.2	Solve problems related to surface tension and interfacial energy in microfluidic systems.
CO.424.3	Describe the electrohydrodynamics fundamentals and solve related problems for microfluidic systems.
CO.424.4	Mathematically model microfluidic devices and systems.
CO.424.5	Propose design strategies for microfluidic systems based on fluid mechanics principles.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<p><b>Module 1:</b> Origin, Definition, Benefits, Challenges, Commercial activities, Physics of miniaturization, Scaling laws. Intermolecular forces, States of matter, Continuum assumption, Governing equations, Constitutive relations. Gas and liquid flows, Boundary conditions, Slip theory, Transition to turbulence, Low Re flows, Entrance effects. Exact solutions, Couette flow, Poiseuille flow, Stokes drag on a sphere, Time-dependent flows, Two-phase flows, Thermal transfer in microchannels. Hydraulic resistance and Circuit analysis, Straight channel of different cross-sections, Channels in series and parallel.</p>	8
<p><b>Module 2:</b> Surface tension and interfacial energy, Young-Laplace equation, Contact angle, Capillary length and capillary rise, Interfacial boundary conditions, Marangoni effect.</p>	8
<p><b>Module 3:</b> Electrohydrodynamics fundamentals. Electro-osmosis, Debye layer, Thin EDL limit, Ideal electroosmotic flow, Ideal EOF with back pressure, Cascade electroosmotic micropump, EOF of power-law fluids. Electrophoresis of particles, Electrophoretic mobility, Electrophoretic velocity dependence on particle size. Dielectrophoresis, Induced polarization and DEP, Point dipole in a dielectric fluid, DEP force on a dielectric sphere, DEP particle trapping, AC DEP force on a dielectric sphere.</p>	8
<p><b>Module 4:</b> Materials, Clean room, Silicon crystallography, Miller indices. Oxidation, photolithography- mask, spin coating, exposure and development, Etching, Bulk and Surface micromachining, Wafer bonding. Polymer microfabrication, PMMA/COC/PDMS substrates, micromolding, hot embossing, fluidic interconnections.</p>	8
<p><b>Module 5:</b> Micropumps, Check-valve pumps, Valve-less pumps, Peristaltic pumps, Rotary pumps, Centrifugal pumps, Ultrasonic pump, EHD pump, MHD pumps. Microvalves, Pneumatic valves, thermopneumatic valves, Thermomechanical valves, Piezoelectric valves, Electrostatic valves, Electromagnetic valves, Capillary force valves. Microflow sensors, Differential pressure flow sensors, Drag force flow sensors, Lift force flow sensors, Coriolis flow sensors, Thermal flow sensors. Micromixers, Physics of mixing, Pe-Re diagram of micromixers, Parallel lamination, Sequential lamination, Taylor-Aris dispersion. Droplet generators, Kinetics of a droplet, Dynamics of a droplet, In-channel dispensers, T-junction and Cross-junction, Droplet formation, breakup and transport. Microparticle separator, principles of separation and sorting of microparticles,</p>	8

design and applications. Microreactors, Design considerations, Liquid-phase reactors, PCR, Design consideration for PCR reactors. <b>Few applications of microfluidics:</b> Drug delivery, Diagnostics, Bio-sensing.

## COURSE INFORMATION SHEET

**Course code:** CL425  
**Course title:** Plastic Packaging Technology  
**Pre-requisite(s):**  
**Co- requisite(s):**  
**Credits:** L:03 T:00 P:00  
**Class schedule per week:** 03  
**Class:** B. Tech.  
**Semester / Level:**  
**Branch:** Chemical Engineering, Chemical Engineering-Plastics & Polymer  
**Name of Teacher:**

### Course Objectives

This course enables the students to:

1.	Study the basic concepts of packaging technology
2.	Understand marketing as an integral tool to packaging
3.	Recognize the importance of product-package interaction & its quality aspects in packaging
4.	Study the overall perspective of the packaging industry
5.	Apply and examine the knowledge of properties for selection of packaging materials

### Course Outcomes

After the completion of this course, students will be able to:

CO 425.1	Remember: Effectively observe and compare the different package forms
CO 425.2	Understand: Describe the importance of compatibility studies and their associated parameters.
CO 425.3	Apply: Select the suitable types of packaging material for a particular application(s).
CO 425.4	Analyze: Analyze the various hazards & environmental issues, aesthetics of a package and the differentiating factors.
CO 425.5	Evaluate: Able to judge the right kind packaging material with the help of quality parameter(s).

## Syllabus

MODULE	No. of Lecture Hours
<p><b>Module:1</b>            Definition of Packaging, Benefits of Packaging, Types of Packaging, Principles of Food Packaging, Climate Hazards on Packages, Functions of Packages. Protective Packaging – Principle, Materials used, Functions. Design Fundamentals- Need for Chances in Package Design, Features of Effective Design, Design Factors, Customer Appeal, Packaging Graphics, Package Colour.</p>	9
<p><b>Module:2</b>            Packaging in Metal cans - Raw materials, Coatings, film laminates and inks, Processing of food and drinks in metal packages, Shelf life of canned foods            Packaging in glass containers- Glass containers market sectors for foods and drinks, Attributes of food packaged in glass containers, Environmental profile            Paper and paperboard packaging- Paper and paperboard – fibre sources and fibre separation (pulping), Paper and paperboard manufacture, Properties of paper and paperboard, Package types, Environmental profile.</p>	8
<p><b>Module3</b>            Plastics in packaging - Use of plastics in food packaging, Types of plastic used in packaging – Polyethylene, Polypropylene (PP), Polyethylene terephthalate, Ethylene vinyl acetate (EVA), Polyamide (PA), Polyvinyl chloride (PVC), Polyvinylidene chloride (PVdC), Polystyrene (PS), Acrylonitrile butadiene styrene (ABS), Ethylene vinyl alcohol (EVOH) etc.</p>	7
<p><b>Module4</b>            Coating of plastic films – types and properties, Acrylic coatings, PVdC coatings, PVOH coatings, Low-temperature sealing coatings (LTSCs), Metallising with aluminium, Extrusion coating with PE, Printing and labelling, Novel MAP applications for fresh-prepared produce, Novel MAP gases, Food contact and barrier properties, Sealability and closure, Retort pouch..</p>	9
<p><b>Module 5</b>            Active and intelligent packaging, Active packaging techniques, Intelligent packaging techniques, Environmental and waste management issues with plastic packaging, Legislative issues, developing novel biodegradable materials, Modern packaging systems: Green plastics for food packaging, Recycling packaging materials.</p>	7

## COURSE INFORMATION SHEET

<b>Course code</b>	<b>CL 402</b>
<b>Course title</b>	<b>Polymer Technology Lab-II</b>
<b>Pre-requisite(s)</b>	<b>PH113,CH101,CH102,CL213</b>
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: T: 0 P: 3
<b>Class schedule per week</b>	3
<b>Class</b>	B. Tech.
<b>Semester / Level</b>	<b>VI/Third</b>
<b>Branch</b>	Chemical Engineering(Plastics & Polymer)
<b>Name of Teacher</b>	

### **Course Objectives**

This course enables the students:

1.	Understanding: to explain the types of processing equipment may be used to manufacture a given product
2.	Apply: to identify the compounding ingredients to be used in preparing dough and sheet moulding compound and prepare the plastic product
3.	Analyze: to analyze the performance of plastic product prepared at different processing conditions by the same equipment and optimize the processing conditions
4.	Compose: to write down the recipe of a specific polymer compound suitable for specific application and prepare the plastic product of given dimensions
5.	Design: to design the processing steps on specific equipment when a given product is desired to manufacture

### **Course Outcomes**

After the completion of this course, students will be able to:

CO402.1	Remember: Recall the different types of processing equipment used for manufacturing plastic product of specific design.
CO402.2	Understand: Explain the functions of various parts of the machine during plastic processing
CO402.3	Apply: Apply the knowledge of structure property relationship to choose the materials for manufacturing products of specific polymers using specific processing equipment
CO402.4	Analyze: Categorize the methods of the preparation of plastic moulding specimen on the basis of the thermal behaviour and characterize polymers in respect of various properties
CO402.5	Evaluate: Select additives for different plastics and formulate recipe for specific product manufacturing and compare the properties of various compounds with the variation of specific ingredient after manufacturing plastic products using various processing technique

## SYLLABUS

List of Experiments	(No. of hours per week)
1. Study of 83 Ton L&T Ergotech Injection moulding Machine and effect of process parameters on shrinkage in injection moulding	3
2. Study of thermoforming machine and thermoformed product	3
3. Study of Extrusion process and mechanical mixing of PP& PS	3
4. Study of Blow moulding process and effect of variation of process parameters on product	3
5. Testing of extrusion products-pipe and films	3
6. Manufacturing film by extrusion blowing	3
7. Preparation and characterization of NR & EVA blends	3
8. Study of PS and PMMA solution blends	3
9. Preparation of dough moulding compound and characterization of the composite	3
10. Preparation of sheet moulding compound and characterization of the composite	3

## COURSE INFORMATION SHEET

**Course code:** CL403  
**Course title:** Plant Design  
**Pre-requisite(s):**  
**Co- requisite(s):**  
**Credits:** 2 (L: 0 T: 0 P: 4)  
**Class schedule per week:** 4  
**Class:** B. Tech.  
**Semester / Level:** VII / Four  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives:

This course enables the students to:

1.	Understand the concepts of plant design and project management.
2.	Estimate the capital cost, total product cost and profitability.
3.	Develop optimum flow-sheets.
4.	Develop processes based on economics
5.	Analyze the data and prepare the report in a meaningful way.

### Course Outcomes

After the completion of this course, students will be able to:

CO403.1	Develop material and energy balance equations for a process involving several processing units
CO403.2	Explain the concept of Process Integration/ pinch technology and develop efficient processes.
CO403.3	Evaluate project cost based on economics for plant design.
CO403.4	Select suitable site for plant.
CO403.5	Develop process flow –sheets using Aspen Plus..

## LIST OF EXPERIMENTS:

Sl. No.	Description
1	Manual calculation of material and energy balance for a process involving several processing units. (Example 4.4 Coulson & Richardson's Vol. 6).
2	Process integration and pinch technology (Section 3.17 Coulson & Richardson's Vol. 6) and chapter 8 of James M. Douglas book.
3	Costing and project evaluation (Example 6.4 Coulson & Richardson's Vol. 6).
4	General site consideration (Chapter 14 Coulson & Richardson's Vol. 6).
5	Process flowsheet development and optimization using Aspen Plus.

### Text books:

1. Coulson & Richardson's Chemical Engineering Design, Vol. 6.
2. Conceptual design of chemical processes, James M. Douglas, McGraw-Hill Book Company.

## In-Depth Specialization in Process Engineering, Modeling, and Optimization

### COURSE INFORMATION SHEET

**Course code:** CL361  
**Course title:** Multiphase flow  
**Pre-requisite(s):**  
**Co-requisite(s):**  
**Credits:** L:03 T:00 P:00  
**Class schedule per week:** 03  
**Class:** B. Tech.  
**Semester / Level:**  
**Branch:** Chemical Engineering,  
**Name of Teacher:**

#### Course Objectives:

This course enables the students to:

1.	Learn the fundamentals of multiphase flow.
2.	Predict multiphase conditions to design appropriate systems/apparatus.
3.	Understand complex multiphase systems.
4.	Learn measurement techniques and instrumentation used in multiphase flows.
5.	Understand the recent advances in multiphase flow systems.

#### Course Outcomes:

After the completion of this course, students will be able to:

CO.361.1	Explain fundamental concepts, principles and application of multiphase flow.
CO.361.2	Describe different flow regimes of gas-liquid two phase flow.
CO.361.3	Solve analytical models to analyze the hydrodynamics of different flow regimes.
CO.361.4	Explain hydrodynamics of three phase flows.
CO.361.5	Describe various measurement techniques.

## SYLLABUS

Module	No. of Lecture Hours
Module 1: Introduction to multiphase flow, types and applications, Common terminologies, flow patterns and flow pattern maps. One dimensional steady homogenous flow. Concept of choking and critical flow phenomena.	8
Module 2: One dimensional steady separated flow model: Phases are considered together but their velocities differ. Phases are considered separately, flow with phase change.	8
Module 3: Flow in which inertia effects dominate, energy equations. The separated flow model for stratified and annular flow.	8
Module 4: General theory of drift flux model. Application of drift flux model to bubbly and slug flow. Hydrodynamics of solid-liquid and gas-solid flow. Principles of hydraulic and pneumatic transportation.	8
Module 5: An introduction to three phase flow. Measurement techniques for multiphase flow: Flow regime identification, pressure drop, void fraction and flow rate measurement.	8

### Text Books:

1. One dimensional Two Phase Flow by G. B. Wallis.
2. Measurement of Two Phase Flow Parameters by G.F.Hewitt.
3. Flow of Complex Mixtures by Govier and Aziz.
4. Two Phase Flow by Butterworth and Hewitt.
5. Handbook of Multiphase systems by Hetsroni.

## COURSE INFORMATION SHEET

<b>Course code</b>	CL363
<b>Course title</b>	Advanced Molecular Simulation
<b>Pre-requisite(s)</b>	Chemistry, Physics, Calculus, Numerical Methods in Chemical Engineering
<b>Co-requisite(s)</b>	
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. E.
<b>Semester / Level</b>	V
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

### Course Objectives:

This course enables the students to:

1.	Understand the basic quantum chemistry.
2.	Learn the basics of molecular simulation methods.
3.	Design and run simulation of systems of interest.
4.	Estimate thermodynamic properties using molecular simulation packages.
5.	Analyse the systems using molecular modelling packages.

### Course Outcomes:

After the completion of this course, students will be able to:

CO363.1	Apply the Density Functional Theory to Optimize the Geometry of Molecules.
CO363.2	Explain the basic principles of molecular Simulation.
CO363.3	Develop Simple Monte Carlo Simulation Code.
CO363.4	Develop Simple Molecular Dynamics Code.
CO363.5	Estimate physical properties of pure components using LAMMPS molecular dynamics package.

## SYLLABUS

MODULE	No. of Lecture Hours
<b>Module 1: Ab-initio Methods</b> Schrodinger Wave Equation for one electron system, Schrodinger Wave equation for many electron system, Slater Determinant and Basis Set, HartreeFock Theory, Semi Empirical and Density Functional Theory, Geometry Optimization, Gaussian Job and Frequencies, Benchmarking of Geometry Optimization.	8
<b>Module 2: Monte Carlo Simulation</b> Introduction to Monte Carlo Simulation, Monte Carlo Integration, Periodic Boundary Conditions, Equilibrations, Monte Carlo Sampling, Markov Process and its applications, Metropolis Sampling, Principles of Detailed balance.	8
<b>Module 3: Monte Carlo Simulation in Various Ensembles</b> Simulation Strategy, NVT Ensemble, NPT Ensemble, NVE Ensemble, Grand Canonical Ensemble, Gibbs Ensemble, MC simulation of polymers, MC moves for polymer simulations.	8
<b>Module 4: Molecular Dynamics Simulation</b> Basics of Molecular Dynamics Simulation, Force Field, Integrating Algorithms, Periodic Box and Minimum Image Convention, Long Range Forces, Non-Bonded Interaction, Simple Molecular Dynamics Program, Temperature Control, Pressure Control, Radial Distribution Function, Mean-square-displacement.	8
<b>Module 5: Molecular Dynamics Simulation</b> A case study using Molecular Dynamics with LAMMPS, Steps involved in LAMMPS, Input files in LAMMPS, Analysis of output files.	8

**Name of Teacher:**

#### Course Objectives

This course enables the students to:

1.	Plan experiments, make appropriate measurements, analyze the data and report the results.
2.	Apply theoretical concepts for data analysis and interpretation.
3.	Learn to operate equipments/instruments.
4.	Develop experimental skills.
5.	Examine the theory through experiments

#### Course Outcomes

After the completion of this course, students will be able to:

CO364.1	Prepare and test of recycled paper
CO364.2	Prepare ultrafiltration membranes and evaluate their properties.
CO364.3	Evaluate the properties of solid and liquid fuels.
CO364.4	Evaluate BOD and COD of waste water.
CO364.5	Prepare soap and detergent and evaluate their properties.

## LIST OF EXPERIMENTS:

Sl. No.	Description
1	Preparation and testing of recycled paper.
2	Ultrafiltration membranes: Synthesis by unsteady state phase inversion.
3	Characterization of Gasoline – ASTM Distillation.
4	Characterization of Liquid Fuel (diesel).
5	Penetration Index of Bitumen.
6	Soap and Detergent.
7	Metal Recovery from a dilute solution by an Electrochemical Method.
8	Biochemical Oxygen Demand.
9	Chemical Oxygen Demand and determination of dissolved oxygen concentration in a water sample.
10	Purity of Potassium Permanganate.

## COURSE INFORMATION SHEET

<b>Course code</b>	CL507
<b>Course title</b>	Advanced Process Modelling, Simulation & Optimization
<b>Pre-requisite(s)</b>	Mathematics, Thermodynamics, Chemical Process Calculations.
<b>Co- requisite(s)</b>	Mass Transfer Operation, Heat Transfer Operation, Chemical Reaction Engg.
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. E.
<b>Semester / Level</b>	:5
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

### Course Objectives

This course enables the students to:

1.	Develop information flow diagram from real process, from information flow diagram to numerical form.
2.	Design, manage and operate procedures for the simulation, control and instrumentation of chemical processes.
3.	Develop model equations for Chemical Engineering systems and solve the equations using numerical techniques.
4.	Get familiar with the preferred software packages and optimization techniques to solve linear programming and nonlinear programming problems.
5.	Solve chemical engineering optimization problems using traditional and global optimization techniques.

### Course Outcomes

After the completion of this course, students will be able to:

CO.507.1	Develop information flow diagram from real process, from information flow diagram to numerical form.
CO.507.2	Design, manage and operate procedures for the simulation, control and instrumentation of chemical processes.
CO.507.3	Apply Conservation of Mass, Momentum and Energy to Chemical Engineering Systems.
CO.507.4	Develop and Solve Mathematical Model Equations for Chemical Engineering Systems.
CO.507.5	Solve the Mathematical Model Equations using Numerical Techniques.

## **Syllabus**

### **Module 1**

Introduction to Modeling and Simulation: Uses of Mathematical Models, Principles of Formulation, Fundamental laws: Continuity equation, Energy equation, Equation of motion, Transport equations, Equations of state, Equilibrium, Chemical kinetics. Types of Mathematical Models – Linear model vs. nonlinear model, Static model vs. dynamic model, Lumped and distributed parameter models, Fundamental model vs. empirical model. (8)

### **Module 2**

Examples of Mathematical models of chemical engineering systems: Series of isothermal constant-holdup CSTRs, CSTRs with variable holdups, Two heated tanks, Gas-phase pressurized CSTR, Non-Isothermal CSTR, Single component vaporizer, Multicomponent flash drum, Batch reactor, Ideal binary distillation column, Multicomponent non-ideal distillation column, Batch distillation with holdup. (8)

### **Module 3**

The nature and organization of Optimization Problems: What Optimization is all about, Why Optimize, Scope and Hierarchy of Optimization, Examples of Applications of Optimization, The Essential Features of Optimization Problems, General Procedure for solving Optimization Problems, Obstacles to Optimization. Formulation of Optimization Problems: Degree of Freedom, Objective Functions, Constraints, Continuity of Functions, Unimodal and Multi-modal Functions, Concave and Convex Functions. Single Variable Problems: Analytical and Numerical Methods, Search Techniques (interval halving, Fibonacci, Golden Section, Gradient Method) (5)

### **Module 4**

Linear Programming: Simplex Method, Artificial variables and dual method (8)

### **Module 5**

Multivariable problems without constraints (Direct Search Method: Simplex, Powell's conjugate Method; Gradient Method: Steepest Descent, Newton, conjugate gradient method) Multivariable problems with constraints: Kuhn-Tucker condition, Penalty method, Method of Multipliers, Direct Search Method, Generalized Reduced Gradient (GRG), Genetic Algorithm, Simulated Annealing part swarm optimization, differential evolution, self organizing migrating algorithm, and scatter search. (13)

### **Text books:**

1. Optimization Theory and Practice by G. S. G. Beveridge and R. S. Schechter, McGraw Hill, 1970.
2. Optimization Theory and Application by S S Rao, Wiley Eastern, 2006.
3. Optimization for Engineering Design: Algorithm and Examples by K Deb, PHI, 1995

4. Optimization Concepts and Applications in Engineering by A. D. Belegundu and T. R. Chandrupatla, Pearson Education Asia, 2002
5. Process Optimization by W. H. Ray and Szekely, Wiley, NY, 1973

## COURSE INFORMATION SHEET

<b>Course code</b>	CL514
<b>Course title</b>	Computational Fluid Dynamics
<b>Pre-requisite(s)</b>	
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. TECH.
<b>Semester / Level</b>	6
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

### Course Objectives:

This course enables the students:

1.	Learn the fundamentals of computational method for solving non-linear partial differential equations.
2.	Understand the widely used techniques in the numerical solution of fluid equations.
3.	Understand the issues that arise in the solution of fluid equations.
4.	Learn CFD techniques for solving incompressible and compressible N-S equation in primitive variables, grid generation in complex geometry, transformation of N-S equation in curvilinear coordinate system.
5.	Understand the Computational Fluid Dynamics along with chemical engineering application.

### Course Outcomes:

After the completion of this course, students will be able to:

CO514.1	Solve the Navier-Stokes equations
CO514.2	Use Finite Difference and Finite Volume methods in CFD modeling.
CO514.3	Generate and optimize the numerical mesh.
CO514.4	simplify a real fluid-flow system into a simplified model problem, to select the proper governing equations for the physics involved in the system, to solve for the flow, to investigate the fluid-flow behavior, and to understand the results.
CO514.5	Simulate simple CFD models and analyze its results.

## SYLLABUS

MODULE	No. of Lecture Hours
<p><b>Module 1:</b>  <b>Introduction:</b> Illustration of the CFD approach, CFD as an engineering analysis tool, Review of governing equations, Initial and boundary conditions, Partial differential equations- Parabolic, Hyperbolic and Elliptic equation.</p>	
<p><b>Module 2:</b>  <b>Principles of Solution of the Governing Equations:</b> Finite difference and Finite volume Methods, Convergence, Consistency, Error and Stability, Accuracy, CFD and formulation. <b>Mesh generation:</b> Overview of mesh generation, Structured and Unstructured mesh, Guideline on mesh quality and design, Mesh refinement and adaptation.</p>	8
<p><b>Module 3:</b>  <b>Discretization:</b> Spatial discretization of a simple flow domain, Taylor's series expansion and the basis of finite difference approximation of a derivative; Central and one-sided difference approximations; Order of accuracy of finite difference, Finite difference approximation of pth order of accuracy for qth order derivative; Examples of high order accurate formulae for several derivatives, One-sided high order accurate approximations.</p>	8
<p><b>Module 4:</b>  <b>Solution Methods:</b> Discretization schemes for pressure, momentum and energy equations – Explicit and implicit Schemes, Solution methods of discretised equations - Tridiagonal matrix algorithm (TDMA) Application of TDMA for 2D problems potential flow - Stream and vorticity function. Unsteady flows - Crank Nicholson scheme, solution of Navier-Stokes equations.</p>	8
<p><b>Module 5:</b>  <b>CFD Solution Procedure:</b> Problem setup-creation of geometry, mesh generation, selection of physics and fluid properties, initialization, solution control and convergence monitoring, results reports and visualization. <b>Case Studies:</b> Benchmarking, validation, Simulation of CFD problems by use of general CFD software, Simulation of coupled heat, mass and momentum transfer problem.</p>	8

**Name of Teacher:**

#### Course Objectives

This course enables the students to:

1.	Plan experiments, make appropriate measurements, analyze the data and report the results.
2.	Apply theoretical concepts for data analysis and interpretation.
3.	Learn to operate equipments/instruments.
4.	Develop experimental skills.
5.	Examine the theory through experiments

#### Course Outcomes

After the completion of this course, students will be able to:

CO365.1	Perform proximate analysis and evaluate the calorific value of coal.
CO365.2	Determine the physical properties of fuels.
CO365.3	Evaluate the physical properties and calorific values of bio-based fuels.
CO365.4	Experiment on solar systems and calculate various parameters.
CO365.5	Perform experiment on fuel cell and calculate related parameters.

## **LIST OF EXPERIMENTS:**

1. Characterization of coal– I [Proximate Analysis]
2. Characterization of coal – II [Bomb Calorimeter]
3. Commercial viscometer – Redwood I, Redwood II, Engler, Saybolt
4. Flashpoint by Cleaveland Open Cup, Pensky Martin Closed Cup, Abel  
Closed cup
5. Biodiesel
6. Bioethanol
7. Fuel cell
8. Solar Energy - photovoltaic
9. Solar Energy - Thermal energy
10. Calorific value of LPG by Junkers Calorimeter.

## COURSE INFORMATION SHEET

<b>Course code</b>	CL614
<b>Course title</b>	Process Integration
<b>Pre-requisite(s)</b>	Basic knowledge of material and energy balances, fluid mechanics, heat and mass transfer phenomena, thermodynamics.
<b>Co-requisite(s)</b>	
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	
<b>Class</b>	B. TECH.
<b>Semester / Level</b>	VII
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

### Course Objectives:

This course enables the students:

1.	To understand the energy and mass targets in design of processes.
2.	To learn the integration of chemical processes to form an efficient system.
3.	To find the minimum heating and cooling requirements for a process.
4.	To explain the role of thermodynamics in process design.
5.	To critically assess any design changes to process.

### Course Outcomes:

After the completion of this course, students will be able to:

CO614.1	Explain the concept of Process Integration.
CO614.2	Explain fundamentals of Pinch Technology.
CO614.3	Apply Pinch Technology.
CO614.4	Analyze Heat Exchanger Network using Composite Curves.
CO614.5	Analyze Heat Integration of Distillation Column using Composite Curves.

## SYLLABUS

MODULE	No. of Lecture Hours
<b>Module 1:</b> Introduction to process Intensification and Process Integration (PI), Areas of application and techniques available for PI, onion diagram, Process Integration in Chemical Industries, Formulation of a Design Problem, Chemical Process Design and Integration, Hierarchy of Chemical Process Design and Integration, Continuous and Batch Processes, New Design and Retrofit, Approaches to Chemical Process Design and Integration, Process Control.	8
<b>Module 2:</b> Pinch Technology- Introduction, Basic concepts, how it is different from energy auditing, Roles of thermodynamic laws, problems addressed by Pinch Technology. Key steps of Pinch Technology: Concept of $\Delta T_{min}$ , Data Extraction, Targeting, Designing, Optimization-Supertargeting.	8
<b>Module 3:</b> Basic Elements of Pinch Technology: Grid Diagram, Composite curve, Problem Table Algorithm, Grand Composite Curve.	8
<b>Module 4:</b> Targeting of Heat Exchanger Network, Designing of Heat Exchanger Networks, Hot Composite Curve, Cold Composite Curve, Problem Table Algorithm, Grand Composite Curve, Area Targeting by Uniform Bath formula and Unit Targeting by Euler's formula, Heuristics for Pinch Design, Maximum Energy Recovery Design, Evolution of Network.	8
<b>Module 5:</b> Distillation Integration: Distillation sequencing, Heat Integration characteristics of Distillation column, appropriate placement of distillation column, various configurations for heat integration of distillation column, Distillation Sequencing for Azeotropic Distillation.	8

### Text books:

1. Heat Exchanger Network Synthesis, U. V. Shenoy, Gulf Publishing company.
2. Chemical Process Design, R. Smith, McGraw-Hill.

### Reference books:

1. A User Guide on Process Integration for the Efficient Uses of Energy, B. Linnhoff, D.W. Townsend, D Boland, G. F. Hewitt, B. E.A. Thomas, A. R. Guy, and R. H. Marsland, Inst. Of Chemical Engineers.

# In-Depth Specialization in Polymer Processing

## COURSE INFORMATION SHEET

<b>Course code:</b>	<b>CL 632</b>
<b>Course title:</b>	<b>Polymer Physics</b>
<b>Pre-requisite(s):</b>	
<b>Co- requisite(s):</b>	
<b>Credits:</b>	L:03 T:00 P:00
<b>Class schedule per week:</b>	03
<b>Class:</b>	B. Tech.
<b>Semester / Level:</b>	06
<b>Branch:</b>	Chemical Engineering, Chemical Engineering-Plastics & Polymer
<b>Name of Teacher:</b>	Dr. P. Datta/ Dr. G. Sarkhel/ Dr. S. Goswami

### Course Objectives

This course enables the students to:

1.	Learn the fundamental knowledge on the physics of polymer materials, their volume and surface properties;
2.	Knowledge on polymer materials with special properties, obtained by various physical and chemical methods, and of their performances;
3.	Ability to use analysis techniques to identify the properties of polymer materials of interest in modern applications;
4.	Work in a team for solving experimental and technological issues; identify and use bibliographic resources for continuous formation
5.	To familiarize with recent advances in the field of Polymer Physics

### Course Outcomes

After the completion of this course, students will be:

CO 632.1	Remember: account for different descriptions of size and shape of a polymer, and being able to predict phase properties and aggregate structure from the chemical properties and structure of the monomers, using the Flory-Huggins theory.
CO 632.2	Understand: account for the molecular theory of rubber elasticity and apply this on relevant problems.
CO 632.3	Apply: apply phenomenological theory to characterise linear viscoelastic materials. account for the origin of deformation and fracture of polymeric materials from a molecular basis
CO 632.4	Analyze: Able to study various parameters and predict the polymer behaviour.
CO 632.5	Evaluate: suggest and motivate choice of polymeric materials in different products and practical applications, especially regarding rheology and strength

## Syllabus

MODULE	No. of Lecture Hours
<p>Module1</p> <p>A single ideal chain; mean-square end-to-end distance, radius of gyration. Gaussian chain. freely jointed chain. worm-like chain, stretching and confinement, structure factor, excluded volume, solvent quality, theta-temperature. Polymer solutions: Flory Huggins Theory, osmotic pressure. Polymer solutions: scaling laws for good solvents, concentration fluctuation and correlation length. Polymer solutions: Size of a polymer in semi-dilute solutions, poor solvents and phase separation, fractionation.</p>	10
<p>Module2</p> <p>Measurements of polymer sizes in solution: osmotic pressure, light scattering, intrinsic viscosity, size-exclusion chromatography. Polymer melts / concentrated solutions, SANS studies of chain dimensions and of correlation hole. Polyelectrolytes. Debye-Huckle theory, Donnan equilibrium. Rubber elasticity; gels. Polymerpolymer thermodynamics: phase behavior of polymer blends; stability and metastability. Dynamics of polymeric liquids: phenomenology and constitutive equations, Maxwell model. Rouse theory: equations of motion, normal modes, time-temperature superposition.</p>	10
<p>Module3</p> <p>Diffusion &amp; viscoelasticity, experimental tests of Rouse theory. Zimm theory: hydrodynamic interactions, free-draining and non-draining limits, pre-averaging approximation, experimental tests. Reptation theory: tube model; primitive chain, reptation dynamics. The glass transition; free volume theory. End-teethered chains: polymer brushes, self-assembly and order-disorder transitions of di-block copolymers. Liquid crystalline polymers, polymer crystallization.</p>	8
<p>Module4</p> <p>Linear Viscoelasticity: Boltzmann Superposition Principle, Empirical models for linear viscoelasticity, Relaxation Spectrum, Dynamic Response, Time temperature superposition, Polymeric Yield and Ductility..</p>	6
<p>Module 5</p> <p>Measurement of viscosity: Rotational and sliding surface viscometer, capillary &amp; slit rheometers - sources of error and their corrections. Rheoptics&amp; molecular orientation. Effects of Molecular structure on Rheological properties. Rheology of multi phase systems, Reacting systems, liquid crystal polymer.</p>	6

**Text books:**

1. Text Book of Physical Chemistry ; S. Glasstone, Mc millan and Co. 1962, New Delhi, 2nd Ed. 1962
2. Introduction to Physical Polymer Science, L.H. Sperlings, John Wiley and Sons. New York, 3rd Ed. 2001.
3. Melt Rheology and its role in Plastic Processing, John F. Dealy& Kurt F. Wissburn, Kluwer Academic Publishers, 1999. 4. Viscoelastic Properties of Polymers, John D. Ferry, IIIrd edition, John Wiley & Sons, 1980.

## COURSE INFORMATION SHEET

<b>Course code:</b>	<b>CL633</b>
<b>Course title:</b>	<b>Polymer Product Manufacturing Technology</b>
<b>Pre-requisite flow chart:</b>	<b>CL214Polymer Technology-I, CL312Polymer Processing</b>
<b>Co-requisite:</b>	<b>B.TECH Chemical Engg. (Plastics &amp; Polymer)</b>
<b>Credits:</b>	<b>L: 03 T: 01 P: 00</b>
<b>Class schedule per week:</b>	<b>04</b>
<b>Class:</b>	<b>B. Tech.</b>
<b>Semester / Level:</b>	<b>VII/4<sup>th</sup> year</b>
<b>Branch:</b>	<b>Chemical Engineering (Plastics &amp; Polymer)</b>
<b>Name of Teacher:</b>	<b>Prof. S. Goswami/ Dr. Pulak Datta/ Dr.Sudeepan</b>

### Course Objectives

This course enables the students to:

1.	Outline the steps of specific process to manufacture a specific product, identify the various parts of the machine and explain the function of it
2.	Predict the reasons behind specific product defect and propose probable solutions specific to processing technique
3.	Outline the steps of specific process to manufacture a specific product, identify the various parts of the machine and explain the function of it
4.	Solve numerical problems on simple flow analysis for polymers during a specific processing, interpretation and analysis of rheological data using models for non-Newtonian fluids
5.	Predict the reasons behind specific product defect and propose probable solutions specific to processing technique

### Course Outcomes

After the completion of this course, students will be:

CO 633.1	Understanding: Choose the methods of product manufacture with given plastic material for the specific use.
CO 633.2	Analyze: Identify the defects in plastic products, interpret the product quality in terms of machine parameters and suggest professional engineering solutions as remedies which will be sustainable and economical.
CO 633.3	Apply: Apply most modern technology to modify the process variables on existing machine to manufacture a specific plastic/ rubber/composite product.
CO 633.4	Create: optimize the design for manufacturing specific product, handle projects related to development of new products.
CO 633.5	Design: design and develop polymer product with defined structural properties.

## Syllabus

MODULE	No. of Lecture Hours
Module1 Compression moulding –Process description, various parts of the machine, Types of moulds, analysis of melt flow inside a mould, Advantages and limitations of compression moulding, Materials used- with and without reinforcement, Manufacturing of specific products-shoes,sheets	10
Module2 Extrusion: Extruder variuos parts of the machine Classification-single screw, twin screw (co and counter rotating type), Flow analysis: pressure flow, leak flow, drag flow, influence of polymer properties, Technology of product manufacturing: dies used for Pipe, films, Tapes.	8
Module3 Injection moulding–Effect of mould cooling on product quality, ejection, Part cooling analysis, Reaction Injection Moulding-process description, materials used, product defects and its remedies.	6
Module4 Pultrusion- process description, Materials used-resin, reinforcement, Classification, Machinery, defects, remedies, Blow moulding- process description, Materials used-resin, reinforcement, Classification, Machinery, defects, remedies, Analysis of product quality.	8
Module 5 Calendering- process description, Materials used-resin, reinforcement, Classification, Machinery, defects, remedies classification, flow analysis, Rotomoulding- process description, Materials used-resin, reinforcement, Classification, Machinery, defects, remedies classification.	6

### Text Books:

## COURSE INFORMATION SHEET

<b>Course code:</b>	<b>CL374</b>
<b>Course title:</b>	<b>Polymer Rheology Lab</b>
<b>Pre-requisite(s):</b>	
<b>Co- requisite(s):</b>	<b>Nil</b>
<b>Credits:</b>	<b>L: 00 T: 00 P: 03</b>
<b>Class schedule per week:</b>	<b>03</b>
<b>Class:</b>	<b>B. Tech</b>
<b>Semester / Level:</b>	<b>03</b>
<b>Branch:</b>	<b>Chemical Engg/ Chemical Engineering- Plastics and Polymer</b>
<b>Name of Teacher:</b>	

### Course Objectives

This course enables the students to:

1.	Understand the polymer rheology
2.	Determination of viscosity and related properties of polymer fluids.
3.	Understand the study of flow & determination of polymeric melt while being sheared through various flow profiles during processing.
4.	Study various parameters that affect the flow behavior in polymer melt.
5.	Equip the students with in-depth knowledge for their careers in relevant industry.

### Course Outcomes

After the completion of this course, students will be able to:

CO 374.1	Remember: Able to recall the different types of flow behaviour of polymers
CO 374.2	Understand: Able to explain the knowledge in flow behaviour of polymers
CO 374.3	Apply: An ability to calculate therheological parameters of different types of polymers.
CO 374.4	Analyze: Able to describe the viscoelastic behavior of polymers with respect to their chemical structures
CO 374.5	Evaluate: To construct a corresponding master curve from the experimental data, which can be used to predict the material response at different temperatures, times, and/or frequencies.

## Syllabus

EXPERIMENTS	No. of Lab Hours
Exp1 Determination of viscosity of various thermoset and thermoplastic polymers by Brookfield viscometer.	3
Exp2 Determination of “gel time” of various adhesives and polymers by Gelation Timer.	3
Exp 3 Determination of viscosity of PVC polymers by Ostwald viscometer.	3
Exp 4 Determination of molecular weight by viscosity using Ubbelohde Viscometer	3
Exp 5 Stress relaxation and time distribution curve includes information about the molecular weight distribution of the polymer using parallel plate viscometer.	3
Exp 6 Frequency Sweep and Cross-Over Point determination by the average molecular weight and molecular weight distribution by cone and plate viscometer	3
Exp 7 Determination of Melt Fracture by the oscillating pressure signal of a polymer melt.	3
Exp 8 Creep & Recovery Curve of polymer and zero shear viscosity to be determined and equilibrium recoverable compliance.	3
Exp 9 Study of Rheological properties of polymer Gel.	3
Exp 10 Study of compatibility of polymer blends using Rheological study	3

## COURSE INFORMATION SHEET

**Course code:** CL373  
**Course title:** ADHESIVE TECHNOLOGY  
**Pre-requisite(s):** Core Course after VIth semester  
**Co- requisite(s):**  
**Credits:** L:03 T:00 P:00  
**Class schedule per week:** 03  
**Class:** B. E.  
**Semester / Level:** 06  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives:

This course enables the students to:

1.	Remember: Define adhesives, Sealants and thermoplastic adhesives
2.	Understand: Explain the surface characteristics of different types of surfaces
3.	Apply: Describe the manufacturing process of adhesives
4.	Analyse: Analyse the environment and select adhesives for specific applications
5.	Evaluate: Given a type of substrate evaluate the surface properties and select adhesives.

### Course Outcomes:

After the completion of this course, students will be able to:

CO 373.1	Remember: Describe the surface preparations for adhesive applications
CO 373.2	Understand: Discuss the theory of adhesion .
CO 373.3	Apply: Illustrate the testing of adhesives
CO 373.4	Analyze: Examine the substrate and suggest possible adhesives
CO 373.5	Evaluate: Evaluate the defects in adhesive applications and suggest possible remedies

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Fundamentals of Adhesive Bonding. Adhesion Phenomena. Factors affecting Adhesion. Requirements for adhesion. Methods of Promoting and Maintaining Adhesion .	8
<b>Module 2:</b> Surface Engineering. Surface nature and Characteristics. Surface Cleaning and Preparation of Metals, Plastics and Composites. Physical Modification. Mechanical Modification. Chemical Modification. Specific Methods of	8

Modifying Plastic/Composite Surface. Evaluation of Surface Preparations .	
<b>Module 3:</b> Manufacturing of Adhesives: Acrylics, Epoxy, Phenolics, Polyurethanes, Polyamides/polyimide, Silicone and Silicone Modified Adhesives, Conductive Adhesives, Sealants. Properties, Selection and Application Anerobics, Cyno acrylates, Hot Melts, Rubber-based Adhesives, Pressure Sensitive Adhesives, Radiation Cure Adhesives	8
<b>Module 4:</b> Theories of adhesion. Cohesive strength, surface tack, peel strength. Methods of Non-destructive Testing, Destructive bond strength evaluation, Advanced Test Methods. Environmental effects on adhesive performance of composites.	8
<b>Module 5:</b> Water based adhesives .Natural resins and gums. Cellulose based adhesives. Rubber based adhesives. Pressure sensitive adhesives. Adhesives for Severe Environments, High Performance Adhesives	8

**Text books:**

1. Surface Coating Science & Technology - edited by Swaraj Paul, John Wiley & Sons.
2. Handbook of Adhesives - Skeist, Irving, Van Nostrand, New York, 1990. 3rd Edn.

**LABORATORY**  
**COURSE INFORMATION SHEET**

**Course code:** CL375  
**Course title:** Polymer Synthesis Lab  
**Pre-requisite(s):**  
**Co-requisite(s):**  
**Credits:** 1.5 (L: 0 T: 0 P: 3)  
**Class schedule per week:** 3  
**Class:** B. Tech.  
**Semester / Level:** VI / Third  
**Branch:** Chemical Engineering  
**Name of Teacher:**

**Course Objectives**

This course enables the students to:

1.	Remember: Recite the polymer structure.
2.	Understand: Polymerization kinetics and mechanism.
3.	Apply: Demonstrate the polymerization procedure.
4.	Analyze: Illustrate the precautions and safety of method of preparations.
5.	Evaluation: Evaluate the structure property relationship of the synthesized polymer.

**Course Outcomes**

After the completion of this course, students will be able to:

CO375.1	Remember: Recite the synthesis process.
CO375.2	Understand: Describe the method of preparation.
CO375.3	Apply: Illustrate the safety of the process.
CO375.4	Analyse: Analyze the properties of the synthesized polymer.
CO375.5	Evaluation: given a set of properties, suggest the polymerization method.

### **LIST OF EXPERIMENTS:**

1. Synthesis of PMMA by bulk polymerization technique and determination of molecularweight by viscometry.
2. Preparation of PF Resin using acid catalyst.
3. Synthesis of Polystyrene by emulsion polymerization technique.
4. Preparation of Polystyrene by suspension polymerization technique
5. Determination of Glass Transition Temperature by Dilatometric method.
6. Kinetics of condensation of Polymerization: Preparation of unsaturated polyester polycondensation of ethylene glycol and maleic acid.
7. Radical copolymerization of styrene with Maleic anhydride.
8. Grafting of Acrylamide on Polyvinyl alcohol.
9. To synthesize polyaniline by conventional and interfacial synthesis methods.
10. To prepare sulphonated styrene.
11. Identification of polymers by physical method
12. Identification of polymers by chemical method

## Course information sheet

<b>Course code:</b>	<b>CL634</b>
<b>Course title:</b>	<b>Polymer Rheology</b>
<b>Pre-requisite(s):</b>	Macromolecular Science, Polymer Technology
<b>Co- requisite(s):</b>	
<b>Credits:</b>	L:03 T:00 P:00
<b>Class schedule per week:</b>	<b>03</b>
<b>Class:</b>	<b>B. Tech.</b>
<b>Semester / Level:</b>	<b>06</b>
<b>Branch:</b>	<b>Chemical Engineering, Chemical Engineering-Plastics &amp; Polymer</b>
<b>Name of Teacher:</b>	<b>Dr. P. Datta/ Dr. G. Sarkhel</b>

### Course Objectives

This course enables the students to:

1.	Provide the student with an understanding of deformation and flow of polymeric materials such as polymeric liquids, suspensions, melts, colloids, foams, gels, etc.
2.	Understand mechanical behaviour of polymeric materials under applied load for short term and long-term flow behavior of polymer melts.
3.	Perform experimental techniques for measuring the rheological properties.
4.	Describe the viscoelastic behavior of polymers with respect to their chemical structures
5.	Construct a corresponding master curve from the experimental data, which can be used to predict the material response at different temperatures, times, and/or frequencies

### Course Outcomes

After the completion of this course, students will be able to:

CO 634.1	Remember: Able to recall the different types of flow behaviour of polymers
CO 634.2	Understand: Able to explain the knowledge in flow behaviour of polymers
CO 634.3	Apply: An ability to calculate the rheological parameters of different types of polymers.
CO 634.4	Analyze: Able to describe the viscoelastic behavior of polymers with respect to their chemical structures
CO 634.5	Evaluate: To construct a corresponding master curve from the experimental data, which can be used to predict the material response at different temperatures, times, and/or frequencies.

## Syllabus

MODULE	No. of Lecture Hours
Module 1 Introduction and Basic concept of Rheology, classification of fluids, Newtonian and non-Newtonian fluids-Viscosity Models, Yield stress fluids, thixotropic fluids - Structural model, Shear Flow, Dependence of viscosity with temp, pressure, shear stress, shear rate etc. Fluid flow through pipe, parallel plates, slit channel, Annulus Flow.	10
Module2 Viscoelasticity – effect of rate of strain, temperature and time on mechanical behaviour of polymeric materials. Viscoelastic models – stress strain response of spring and dashpot, Maxwell element, Voigt kelvin element – response to creep and stress relaxation, three and four-parameter model. Viscosity of polymer melts– Normal stress, die-swell and melt fracture, Weissenberg effect, Elongational fluid flow.	9
Module3 Measurement of rheological properties: Rotational and capillary rheometers, capillary & slit rheometers - sources of error and their corrections. torque rheometers, Mooney viscometer.	6
Module4 Dynamic mechanical properties, Complex viscosity, Boltzman Superposition principle, time temperature superposition, Relaxation spectrum, WLF equation. Applications of rheology to polymer processing (injection moulding, extrusion and blow moulding)	8
Module 5 Molecular theories of Prediction of linear behaviour, Rouse Model, Bueche Ferry law. Theories of Entangled Melts, Reptation, Doi Edwards Theory, Curties- Bird Model. Rheo-optics & molecular orientation. Effects of Molecular structure on Rheological properties. Rheology of multi phase systems, Reacting systems, liquid crystal polymers.	7

## COURSE INFORMATION SHEET

<b>Course code:</b>	<b>CL635</b>
<b>Course title:</b>	<b>DIE AND MOLD DESIGN</b>
<b>Pre-requisite(s):</b>	
<b>Co- requisite(s):</b>	
<b>Credits:</b>	L: 03 T: 00 P: 00
<b>Class schedule per week:</b>	<b>03</b>
<b>Class:</b>	<b>B. Tech</b>
<b>Semester / Level:</b>	<b>DS</b>
<b>Branch:</b>	<b>Chemical Engineering, Chemical Engineering- Plastics &amp; Polymer</b>
<b>Name of Teacher:</b>	

### Course Objectives

This course enables the students to:

1.	Learn about the design of injection mould and its various parts.
2.	Learn about the design of compression & transfer mould and its various parts.
3.	Learn about the design of blow mould and its various parts.
4.	Learn about the design of extrusion dies and its various parts.
5.	Understand the concept of different types of mould fabrication & selection of materials for various parts of mould.

### Course Outcomes

After the completion of this course, students will be able to:

CO	Description
CO 635.1	Remember: Able to <b>list</b> the various parts of moulds and its design.
CO 635.2	Understand: Able to <b>differentiate</b> about different types of mould & its fabrication.
CO 635.3	Apply: Able to <b>apply</b> knowledge in selection of mould for different processing techniques such as injection, compression, blow and extrusion process.
CO 635.4	Create: Able to <b>design</b> various parts of mould or die.
CO 635.5	Evaluate: Able to <b>recommend</b> the type the mould for a product.

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1: Injection mould design:</b> Introduction – different types of injection moulds, basic mould elements. Methodological mould design. Computation of number of cavities, cavity layout. Selection of parting line. Feed system – design of sprue, runner & gate,	12

Cooling systems, Ejection systems, Mould venting, Mould Alignment, Lifting and clamping. Mechanical Design, Strength of cavities, Support pillar, screws in molds.	
<b>Module 2: Compression &amp; Transfer Mould design:</b> Types of compression moulds, loading chamber design, heater types & calculation, pressure pad area calculation. Transfer moulds: Types of transfer moulds, design of pot and plunger, Feed system, Ejection method, cull pick up.	7
<b>Module 3: Blow Mould design:</b> Types of blow mould, Mould material selection, Parting line, neck, pinch off design, parison design, flash trimming, mould venting, mould cooling, mould alignment.	7
<b>Module 4: Extrusion die design:</b> Introduction – different types of die exit cross sections: Circular, slit, annular, profile.	7
<b>Module 5: Mould fabrication:</b> Selection of materials for moulds and dies. Steels for moulding tools and their treatment. Selection of materials for various parts of mould like cavity, core, back plates, push back pin, guide pin, guide bushes, ejector elements, etc. Selection of materials for various parts of Dies. Outline of method of fabrication: Lathe, milling, grinding, drilling, EDM, shaping, etc.,	7

#### **Textbooks:**

1. Injection Mold Design, R.G.W. Pye, George Godwin. (T1)
2. How to make Injection molds, Menges/Mohren, Hanser, 1993. (T2)
3. Production Technology, R.K. Jain, S. Chand & Co., 1991. (T3)

## Minor in Chemical Engineering

### COURSE INFORMATION SHEET

<b>Course code</b>	CL216
<b>Course title</b>	Unit Operation-I
<b>Pre-requisite(s)</b>	
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: 3 T: 0 P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. TECH.
<b>Semester / Level</b>	V
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

#### Course Objectives:

This course enables the students to:

1.	Calculate Mass and Energy Balances over various chemical engineering Equipments.
2.	Learn numerous industrial operations dealing with the particulate solids along with fluids.
3.	Develop an understanding of basics of mechanical operations.
4.	Understand size analysis, size reduction and working principle of associated equipment used for size reduction.
5.	Understand solid-liquid and liquid-liquid mechanical separation.

#### Course Outcomes:

After the completion of this course, students will be able to:

CO216.1	Estimate mass balance over various unit processes.
CO216.2	Estimate energy balance over various unit processes.
CO216.3	Explain/Estimate various characterisation of solid particles.
CO216.4	Explain various solid handling Equipments.
CO216.5	Classify various solid-solid/solid-fluid separation processes.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module-1:</b> Introductory concepts of units, Mole Concept, Basis of calculations, Introduction to Material Balance, Material Balance problems without chemical reaction. Material Balance with chemical reaction, Material Balances with recycle, bypass and purge. Energy balance: open and closed system, heat capacity, calculation of enthalpy changes, Energy balances with chemical reaction: Heat of reaction, Heat of combustion.	8
<b>Module 2:</b> Characterization of solid particle: Particle Shape, Particle size, Mixed Particle sizes and Size analysis, Specific Surface of mixture, Average Particle Size, Number of Particles in Mixture, Screen Analysis, Screening: Stationary screens and Grizzlies, Gyration Screens, Vibrating Screens, Comparison of Ideal and Actual Screens, Material Balance over Screen, Screen Capacity and Effectiveness.	8
<b>Module 3:</b> Size Reduction: Principles of Comminution, Crushing efficiency, Rittinger's law, Kick's law, Bond's law, Work index, Size-Reduction Equipment: Jaw Crushers, Gyratory Crusher, Roll crushers; Grinders-hammer Mill, Ball Mill, Rod Mill, Fluid Energy Mill, Dry and Wet Grinding, Open-circuit and closed-circuit operation.	8
<b>Module 4:</b> Filtration: Theory of solid-liquid filtration, principle of filtration, constant pressure and constant rate filtration, compressible and incompressible cakes, Filter aids, Equipment of liquid-solid filtration, Batch and continuous pressure filters. Theory of centrifugal filtration, Equipment for centrifugal filtration.	8
<b>Module 5:</b> Gravity Settling process- Gravity Classifiers, Sorting Classifiers, Clarifiers and Thickeners, Flocculation, Batch Sedimentation, Clarifier and Thickener design, Centrifugal Settling Processes: Cyclones, Hydro-cyclones, Centrifugal Decanters: Centrifuges for solid-liquid and liquid-liquid Separation, Principles of Centrifugal Sedimentation.	8

## COURSE INFORMATION SHEET

<b>Course code</b>	CL321
<b>Course title</b>	Petroleum Refinery Engineering & Petrochemicals
<b>Pre-requisite(s)</b>	Reaction Engg., Heat & Mass Transfer operations
<b>Co- requisite(s)</b>	
<b>Credits</b>	L: 3    T: 0    P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. Tech.
<b>Semester / Level</b>	V
<b>Branch</b>	Chemical Engineering
<b>Name of Teacher</b>	

### Course Objectives:

This course enables the students to:

1.	Acquire knowledge of the sources of crude petroleum, extraction of the crude petroleum, its refining to the useful petro-products and efficient transport to the end users through network
2.	Learn all the techniques/processes of petroleum refining encompassing selection of the mass/heat transfer devices, their operation and basic design.
3.	Understand feed stocks of petrochemical industries and manufacture of important petrochemicals and their end uses.
4.	Examine how each refinery process works.
5.	Draw a flow diagram that integrates all refinery processes and resulting refinery products.

### Course Outcomes:

After the completion of this course, students will be able to:

CO 321.1	Describe importance of refinery industries, methods for evaluation of crude & fractions, their inter-convertibility and the principles of operation of atmospheric and vacuum distillation processes.
CO 321.2	Develop knowledge of different refining processes such as cracking, reforming, isomerization, Alkylation etc.
CO 321.3	Explain feed stocks for petrochemical Industries and processes for the production of methane, ethylene, acetylene, propylene and butadiene.
CO 321.4	Explain aromatics separation/recovery process, uses of important aromatics and process for the production of important products based on aromatic such as styrene, cumene, phthalic Anhydride etc.
CO 321.5	Develop process flow-sheet showing important process equipments.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1</b> Exploration and Refining of Crude Oil: Introduction, Indian and world reserve of crude oil and its processing. Capacity, Market demand & supply of petroleum Fractions. methods for evaluation of crude & fractions: TBP, ASTM, EFV, and their inter-convertibility, yield Curve. Desalting of crude, pipe still furnaces, preflashing operation, Atmospheric and vacuum distillation units, types of Reflux arrangements, Calculation of tray requirement for ADU column. Products from Crude oil and their characterizations	8
<b>Module 2</b> Thermal conversion Processes: Thermal cracking processes – mechanism, applications e.g. visbreaking, thermal cracking, coking operations, Catalytic Conversion Processes : Catalytic cracking processes, Different FCC operating modes, Catalytic reforming operations, Hydro cracking, Simple process calculations.	8
<b>Module 3</b> Polymerization, Isomerization processes, Alkylation, Hydrocracking, Catalytic Polymerization for gasoline stock preparation. Finishing & Treatment processes : Different Hydrotreating processes. LOBS extraction	8
<b>Module 4</b> Petrochemical Industries & their feed stocks: Survey of Petrochemical industry. Resources and generation of different feedstocks – their purification, separation of individual components by adsorption, low temperature fractionation. Petrochemicals based on methane, ethylene, acetylene, propylene and butadiene	8
<b>Module 5</b> Separation and Utilization of Aromatics: Catalytic Reforming operation – Separation of BTX from reformat. Isolation of Benzene, Toluene, Xylene. Aromatics derived from thermal cracking of naptha, pyrolysis gasoline hydrogenation process. Alkylation of Benzene. Production of styrene, cumene and phenol, Isomerization of xylene. Production of phthalic Anhydride	8

## COURSE INFORMATION SHEET

<b>Course code</b>	CL322
<b>Course title</b>	Energy Engineering
<b>Pre-requisite(s)</b>	Basic Chemistry and Physics
<b>Co-requisite(s)</b>	
<b>Credits</b>	L: 3    T: 0    P: 0
<b>Class schedule per week</b>	3
<b>Class</b>	B. TECH.
<b>Semester / Level</b>	V
<b>Branch</b>	Chemical Engineering/OPEN Elective
<b>Name of Teacher</b>	

### Course Objectives:

This course enables the students to:

1.	Understand global energy resources, demand and basic principles of waste heat recovery.
2.	Learn the principles and technologies of conversion of conventional energy resources to useful energy forms and products.
3.	Learn principles and technologies of conversion of non-conventional renewable energy resources to devices and various energy forms.
4.	Understand various renewable energy technologies and systems.
5.	Equip the students with knowledge and understanding of various possible mechanism about renewable energy projects.

### Course Outcomes:

After the completion of this course, students will be able to:

CO 322.1	Explain various energy sources, their availability, importance of energy conservation & audit and available energy conservation technologies.
CO 322.2	Describe fundamental concepts of conversion technologies of conventional energy resources such as coal, petroleum and gaseous fuels and their utilization.
CO 322.3	Explain principles and technologies of conversion of renewable energy resources to various other energy forms.
CO 322.4	Acquire the knowledge of modern energy conversion technologies.
CO 322.5	Assess major energy issues and challenges of the 21 <sup>st</sup> century.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<p><b>Module 1</b> Introduction to Energy Science and Energy Technology; Global Energy sources and their availability. Prospects of Renewable energy sources; Energy conservation: Principle of energy conservation and Energy audit. Energy conservation Technologies – Co generation, waste heat utilization, Heat recuperates, Heat regenerators, Heat pipes, Heat pumps Energy storage.</p>	8
<p><b>Module 2</b> <b>Solid Fuels:</b> Introduction of solid fuels. COAL: Origin, reserves, classification &amp; ranking, analysis, testing, storage; Coal carbonization: LTC, HTC, Ovens and Retorts; By-products recovery; Burning of coal and firing mechanism; fluidization combustion boilers <b>Liquid Fuels:</b> Constitution of petroleum, theory of formation of crude, characterization of crude oil &amp; petroleum fuels, operation and flow-sheet of crude distillation, catalytic cracking, coking, vis-breaking and reforming processes, Process of a typical Indian refinery.</p>	8
<p><b>Module 3</b> <b>Gaseous Fuels:</b> Physico-chemical principles, Calorific Value, Wobbe index, flow-sheet and burners and furnace operation of: Producer gas, Water gas, Carbureted water gas, oil gas, coke-oven gas, blast furnace gas, Natural Gas and LPG. Mechanism and principle of combustion. Laminar flame propagation, theory &amp; structure of flame. Burning velocity &amp; its determination. Diffusion of flame &amp; Flame stabilization. <b>Nuclear energy:</b> Nuclear reactions, Nuclear Fuels and reactors, power generation. Global, Indian Scenario.</p>	8
<p><b>Module 4</b> <b>Alternate Energy-I</b> <b>Geothermal energy:</b> Introduction, Resources and Utilization of Geothermal energy, Different types of Geothermal Electric power plant and their operations for Geothermal Energy systems in India. <b>Wind Energy:</b> Fundamentals and application, Wind Energy conversion system, Performance of wind machines, Electricity generation for wind. <b>Hydrothermal Energy:</b> Types, principle of operation <b>Bio Energy:</b> Biomass conversion for fuels; production methods based on thermochemical and bioconversion. Characteristics and uses; <b>Energy from the oceans:</b> Introduction Ocean Energy conversion Technologies. Types of Ocean Thermal Electric Power Generation system and their operation. Tidal power plant.</p>	8
<p><b>Module 5</b> <b>Alternate Energy-II</b> <b>Solar Energy:</b> Solar radiation &amp; its measurement, different types of solar</p>	8

collectors. Solar energy devices: solar photovoltaic cells, solar thermal power plants and other; storage system & application of solar energy. <b>Fuel cell:</b> Introduction, design & principle operation of fuel cell, classification of fuel cells Applications and recent advances <b>Hydrogen energy:</b> Introduction, production of hydrogen energy: electrolysis, thermo-chemical, Biotechnology methods etc. Hydrogen storage & transportations. Safety & management. Hydrogen technology development in India.

## COURSE INFORMATION SHEET

Course code: CL323

Course title: Pollution control and equipment design

Pre-requisite(s):

Co- requisite(s):

Credits: L:3 T:0 P:0

Class schedule per week: 3

Class:B. Tech.

Semester / Level:

Branch: Chemical Engineering

Name of Teacher:

### Course Objectives:

This course enables the students to:

1.	Impart knowledge on different types of environmental pollution.
2.	Impart knowledge on designing of various types of equipments to control different types of pollution
3.	Learn the concepts behind industrial waste characterization, treatment and disposal.
4.	Understand the science and technology associated with pollution control and monitoring.
5.	Describe methods of advanced effluent treatment.

### Course Outcomes:

After the completion of this course, students will be able to:

CO 323.1	Explain legislative aspects including water act, Air Act and effluent standards.
CO 323.2	Explain air pollution sources, air pollutants & their effects, working principle of Air pollution control equipments and their design.
CO 323.3	Describe water pollution sources, water pollutants & their effect, terms related with water pollution and working principle of primary equipments and their design.
CO 323.4	Explain conventional and advanced methods for waste water treatment.
CO 323.5	Explain solid waste collection, disposal and treatment methods.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Types of environments and their pollutants. Classification of pollutants, Legislative aspects including water act. 1974, Air Act 1981 and effluent standards. Air pollution: Sources and effects of different air pollutants, Sampling and analysis of air pollutants.	5
<b>Module 2:</b> Design and working principle of Air pollution control equipments: gravitational settling chambers, Cyclone Separator, ESP. Selection criteria of particulate collector. Dispersion of air pollutants and solutions to the atmospheric dispersion equation. Control of gaseous emission with special reference to Sulphur dioxide, Nitrogen oxide, carbon monoxide and hydrocarbons. Design of gaseous emission controlling equipments: Gas absorption, Adsorption, burners etc.	12
<b>Module 3:</b> Water pollution: Sources, sampling. Classification of water pollutants & their effect. BOD, COD, SS, TS, TDS etc. Primary Treatment- Design of Sedimentation tank, Floatation.	5
<b>Module 4:</b> Biological Treatment of wastewater: Design of activated sludge treatment system, trickling filter. Facultative ponds, aerobic and anaerobic ponds, etc. Advanced Treatment: microstraining, coagulation and filtration, sonoluminescence, adsorption, Ion exchange, solvent extraction, stripping, Membrane Separation techniques – ultrafiltration, Reverse osmosis, electrodialysis etc.	8
<b>Module 5:</b> Solid waste management, Sources and classification, public health aspects, Methods of collection and disposal methods: open dumping, landfill, incineration, composting, vermiculture; Solid waste management using bioremediation for specific pollutants like chromium. Mercury, ammonia / urea, phenolic sludge. Incinerator Design.	10

## COURSE INFORMATION SHEET

Course code: CL217  
 Course title: Unit Operation II  
 Pre-requisite(s):  
 Co- requisite(s):  
 Credits: L:3 T:0 P:0  
 Class schedule per week: 3  
 Class: B. Tech.  
 Semester / Level:  
 Branch: Chemical Engineering  
 Name of Teacher:

### Course Objectives:

This course enables the students to:

A.	Understand the basic principles of fluid mechanics.
B	Describe mass and momentum balance equations.
C	Learn basic principles of fluidization engineering and its application in chemical engineering.
D.	Acquire knowledge on basic principles of Heat transfer.
E.	Design heat transfer equipments.

### Course Outcomes:

After the completion of this course, students will be able to:

CO217.1	Identify and describe the fluid static mechanisms, concept of pressure, pressure measuring device, flow rate measuring device.
CO217.2	Apply mass and momentum balance equation to solve various engineering problems.
CO217.3	Describe fluidization and its applications.
CO217.4	Explain the basic principles of heat transfer: Conduction, Convection and Radiation.
CO217.5	Design different types of heat transfer equipments.

### SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1:</b> Introduction to fluids, Continuum hypothesis, Forces on fluids, Normal and shear stresses, Fluid statics - pressure distribution, Manometer, Kinematics of fluid flow- Eulerian and Lagrangian descriptions, Flow visualization, Stream function.	5
<b>Module 2:</b> Reynolds transport theorem, Integral balances - mass and momentum, Euler's	12

equation of motion, Bernoulli equation and applications, Differential analysis: mass and momentum balances, Navier-Stokes equation, Unidirectional flow, Viscous flow, Transportation of fluids - pumps, selection and design of pumps	
<b>Module 3:</b> Solid particle characterization: Particle size, shape and their distribution; Relationship among shape factors and particle dimensions; Specific surface area; Measurement of surface area, Fluidization: Fluidized bed, minimum fluidization velocity, pressure drop, Geldart plot etc. Types of fluidization: Particulate fluidization, Bubbling fluidization, Classical models of fluidization, Circulating fluidized beds, Applications of fluidization	7
<b>Module 4:</b> Basic Principles of heat transfer: Conduction, Convection and Radiation, Finding the heat transfer coefficients, concept of overall heat transfer coefficient.	5
<b>Module 5:</b> Basic Principle of heat exchanger, Design of heat exchanger, Basic Principle of evaporator, Different types of evaporator.	11

## COURSE INFORMATION SHEET

**Course code:** CL332  
**Course title:** Safety and hazards in chemical industries  
**Pre-requisite(s):**  
**Co- requisite(s):**  
**Credits:** L: 03 T: 00 P: 00  
**Class schedule per week:** 3  
**Class:** B. Tech.  
**Semester / Level:**  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives:

This course enables the students to:

1.	Identify and manage various aspects of occupational hazards existing in chemical industries.
2.	Develop a safe protocol by safety audit and risk assessment and minimize potential damages to process equipment's, people and the environment.
3.	Understand fundamentals of chemical process safety and hazards management.
4.	Learn important component of the risk management plat i.e. hazards identification, hazard analysis etc.
5.	Describe the advancement in the field of the risk assessment.

### Course Outcomes:

After the completion of this course, students will be able:

CO 332.1	Understand the importance of plant safety and safety regulations, personal protective equipment's, principles and procedures of safety audit.
CO 332.2	Identify and mitigate different types of toxic chemical hazards
CO 332.3	Implement various safety aspect of fire and explosion in a chemical plant
CO 332.4	Assess and mitigate different hazards due to storage and transportation of chemicals, plant operations.
CO 332.5	Design safety protocols for chemical industry using various hazard evaluation tools.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>MODULE -1: Introduction to industrial safety and Hazards:</b> Definition of safety, Hazard and Risk, Chemical Hazard Symbols, Personal protective equipment, Safety program, Accident and loss statistics (OSHA incident rate, fatal accident rate (FAR), and fatality rate), Engineering ethics, Industrial hygiene. Factories Act, 1948 and Environment (Protection) Act, 1986 and rules thereof, Review of industrial accidents.	8
<b>MODULE -2: Toxic Substances and Confined Spaces:</b> Toxic Substances Definition, Classes of Toxicity, Entry Points for Toxic Agents, Effects of Toxic Substance, Relationship of Doses and Responses, Threshold Limiting Values, Exposure Thresholds, Airborne Contaminants, Confined Spaces Hazards, Respiratory Protection, Prevention and Control	8
<b>MODULE -3: Fire and Explosion:</b> Work Place Hazard, Dangerous Substance Fire triangle, Effective Ignition Source, Static Electricity, Explosion: BLEVE, VCE, Detonation and Deflagration, Flammability Limits, LOC, Flash point, Flammability Diagram, Flammable and Combustible Liquids.	8
<b>MODULE -4: Safety and Hazard in Chemical Process Plant:</b> Decomposition & Runaway Reactions, Initiating factors Reactive Chemical Hazard, Case Studies: T2 Laboratories, Florida, Synthron, North Carolina, Phenol Formaldehyde Reaction. Assessing Reaction Hazard; Tools for evaluating thermal explosion, Steps to Reduce Reactive Hazards. Process Plant Design: Flow Diagrams; Piping and Instrumentation Diagram, Control System, Alarms. Chemical Plant Layout: Passive protection, Active Protection, Emergency Shutdown System, Safety Integrity Level, Inherent Safety Techniques	8
<b>MODULE -5: Hazard Identification and Evaluation Technique:</b> Quantitative, Qualitative Safety Review, Process /System Checklists, Dow Fire and Explosion Index, What-If Analysis. HAZOP Study, Reliability, Probability Distribution, Demand and Failure, Fault Tree Analysis (FTA), Minimal Cut Set Identification, Event Tree Analysis.	8

## COURSE INFORMATION SHEET

**Course code:** CL218  
**Course title:** Unit Operation III  
**Pre-requisite(s):**  
**Co- requisite(s):** NIL  
**Credits:** L: 3 T: 1 P: 0  
**Class schedule per week:** 04  
**Class:** B. TECH.  
**Semester / Level:** VII  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives:

This course enables the students to:

1.	Understand the basic principle of mass transfer operation and its application.
2.	Explain various separation processes.
3	Understand gas-liquid contact process and design absorption column.
4.	Describe the distillation process and its applications.
5.	Describe various membrane separation processes.

### Course Outcomes:

After the completion of this course, students will be able to:

CO218.1	Understand the basic principles of mass transfer operation.
CO218.2	Design separation unit for the gas-liquid and gas-solid operations.
CO218.3	Solve engineering problems related to distillation, drying and humidification.
CO218.4	Identify suitable solvent/sorbent for particular liquid-liquid or solid-liquid extraction operation and solve related problems.
CO218.5	Theoretical and analytical knowledge on crystallization and membrane separation processes and their engineering applications.

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<p><b>Module 1:</b>  <b>Basic Principles:</b>            Principles of molecular diffusion and diffusion between phases, Fick's Law, Diffusivity, equation of continuity, Diffusion in solids. Concept of Mass transfer coefficient, correlation of mass transfer coefficients, Theories of Mass Transfer, mass transfer across interfaces, Analogy between momentum, heat and mass transfer.</p>	8
<p><b>Module 2:</b>  <b>(A) Absorption:</b>            Introduction, The mechanism of absorption, equipment for Gas Liquid contact. Concept of HTU, NTU, HETP. Tray efficiency. Gas-liquid absorption calculation.  <b>(B) Adsorption:</b>            Introduction, nature of adsorbents, batch adsorption, Adsorption isotherms. Adsorption equipment, pressure swing, thermal-swing, breakthrough curves. gas-solid adsorption calculation.</p>	8
<p><b>Module 3:</b>  <b>(A) Distillation</b>            Introduction, Vapor -liquid equilibria, Relative volatility, Ideal and non -ideal solutions. Batch, differential and equilibrium distillation, Design calculation of distillation column with special emphasis on McCabe-Thiele method, importance of reflux ratio.  <b>(B) Humidification</b>            Humidification and dehumidification operations, Psychrometric chart, Adiabatic saturation curves etc. Cooling towers and their classification.  <b>(C) Drying</b>            Introduction to drying, Batch drying mechanism, Drying rate curve. Drying time calculation, different types of drying equipment and their classification.</p>	8
<p><b>Module 4:</b>  <b>(A) Liquid-Liquid Extraction</b>            Introduction to liquid-liquid extraction, liquid- liquid equilibria, triangular diagram, selectivity and choice of solvents, stage wise contact, co-current &amp; counter-current extractor, design calculation for stage wise liquid-liquid extraction, extraction efficiency.  <b>(B) Solid-Liquid Extraction</b>            Introduction to solid-liquid extraction, general principle, factors affecting the rate of extraction, liquid -solid equilibria, solid-liquid extraction calculation.</p>	8
<p><b>Module 5:</b>  <b>(A) Crystallization</b>            Introduction to crystallization, Theory of Crystallization, Formation and growth of crystals, crystal yield, Rate of crystallization.</p>	8

**(B)Membrane Separation**

Introduction to membrane separation, classification of membrane, characterization of membrane. Membrane modules, pressure-driven and concentration driven membrane separation processes.

**Text books:**

1. Mass Transfer Operations: Treybal R.E., Mc Graw Hill, 1981
2. Unit Operations of Chemical Engineering: Mc Cabe W.L.and Smith J.C., Mc Graw Hill.5th Ed. 1993.

# Minor in Polymer Engineering

## COURSE INFORMATION SHEET

<b>Course code:</b>	<b>CL312</b>
<b>Course title:</b>	<b>Polymer Processing</b>
<b>Pre-requisite:</b>	<b>CL213,CL214</b>
<b>Credits:</b>	<b>L: 03 T: 00 P: 00</b>
<b>Class schedule per week:</b>	<b>03</b>
<b>Class:</b>	<b>B.Tech.</b>
<b>Semester / Level:</b>	<b>05/3</b>
<b>Branch:</b>	<b>Chemical Engineering -Plastics &amp; Polymer</b>
<b>Name of Teacher:</b>	<b>Prof. S. Goswami, Dr.P.Datta, Dr.J. Sudeepan,Dr,Nirupama</b>

### Course Objectives:

This course enables the students to:

1.	Outline the steps of specific process to manufacture a specific product, identify the various parts of the machine and explain the function of it
2.	Solve numerical problems on simple flow analysis for polymers during a specific processing, interpretation and analysis of rheological data using models for non-Newtonian fluids
3.	Predict the reasons behind specific product defect and propose probable solutions specific to processing technique
4.	Explain both practical and theoretical fundamentals of injection moulding and extrusion technology, including basic knowledge of the moulding process.
5.	Explain a wider range of polymer processes: thermoforming, compression and transfer moulding, rotational moulding, blow moulding, assembling techniques

### Course Outcomes (CO)

After the completion of this course, students will be able to:

CO 312.1	Remembering: Choose the corresponding process to be used to manufacture a specific product from suitable polymers.
CO 312.2	Understanding: Compare the methods of different processing techniques for product manufacture with a given set of plastic materials for the specific use
CO 312.3	Apply: Apply most modern technology to modify the process variables on the existing machine to manufacture a specific plastic/ rubber/composite product
CO 312.4	Analyze: Inspect the defects in plastic products, examine the product quality in terms of machine parameters and list professional engineering solutions as remedies which will be sustainable and economical
CO 312.5	Evaluate: Explain processing difficulties and estimate numerical problems related to polymer processing

## Syllabus

MODULE	No. of Lecture Hours
<b>Module1</b> Rheology of Polymer melts, Viscosity models, Dependence of viscosity on Temperature, Pressure, molecular weight, Viscoelastic models. Extensional viscosity, Rheometers: Capillary, Rotational, cone & plate. Die swell.	8
<b>Module2</b> Extrusion: Extruder Classification, Components- Drives, Bearing, Screw, Barrel, Breaker plate, Screen, hopper, Screw geometry, heating & cooling systems. Process analysis: Solids conveying, plasticating, melt conveying, Melt instabilities. Technology of product manufacturing: Pipe, Films, Wire coating, Tapes, Monofilaments.	10
<b>Module3</b> Injection moulding – Moulding cycle. Machine construction – barrel, screw, nozzles, clamping system, Machine ratings, Basic mould construction – classification, sprue, runner, gate systems, mould cooling, ejection, Part cooling analysis, Effect of process variables on product quality. Special Injection Mouldings. Product defects and its remedies.	6
<b>Module4</b> Classification, Machinery, process details, analysis, defects, remedies: Blow moulding, Thermoforming, Calendering..	8
<b>Module 5</b> Classification, Machinery, process details, analysis, defects, remedies: Rotomoulding, Compression moulding and Transfer moulding.	8

### Text Books:

1. Plastics Engineering, Crawford, R.J., Pergamon Press
2. Polymer Extrusion, Chris Rauwendaal, Hanser, 1994.
3. Plastics Product Design and Process Engineering, H. Belofsky, Hanser, 1995.
4. Blow Moulding Handbook, Rosato, D.V. and Rosato D.V., Hanser, 1989.
5. Plastic Extrusion Technology, Hensen, Hanser, 1997.
6. Polymer processing, D.H. Morton-Jones, Chapman & Hall, New York, 1989,

### Reference books:

1. Principles of Polymer Processing, Tadmor, Z and Gogos, C.G., John Wiley and Sons, 1982.
2. Plastics: Product Design and Process Engineering, Belofsky, H., Hanser Pub. 1995.

## COURSE INFORMATION SHEET

<b>Course code:</b>	<b>CL219</b>
<b>Course title:</b>	<b>Polymer Synthesis and Reaction Engineering</b>
<b>Pre-requisite(s):</b>	
<b>Co- requisite(s):</b>	
<b>Credits:</b>	L:03 T:00 P:00
<b>Class schedule per week:</b>	<b>03</b>
<b>Class:</b>	<b>B. E.</b>
<b>Semester / Level:</b>	<b>04</b>
<b>Branch:</b>	<b>Chemical Engineering (Polymer &amp; Plastics)</b>
<b>Name of Teacher:</b>	

### Course Objectives

This course enables the students to:

1.	Remember: Define chemical structure of polymer, classification of polymer and isomerism in polymer
2.	Understand: Describe the mechanism of polymerization
3.	Apply: Demonstrate the techniques of molecular weight measurement.
4.	Analysis: Analyze the behaviour of polymer solutions
5.	Evaluation: Illustrate the solid state properties of polymer

### Course Outcomes

After the completion of this course, students will be able to:

CO 219.1	Remember: Identify the chemical structure of polymer
CO 219.2	Understand: Describe the polymerization reactions.
CO 219.3	Apply: Synthesize the polymer for specific applications
CO 219.4	Analyze: Illustrate the properties of polymer
CO 219.5	Evaluate: Judge the polymer properties for specific applications

### Syllabus

MODULE	No. of Lecture Hours
<b>MODULE- I</b> Classification of polymer. Polymer structure property relationship, Molecular forces and chemical bonding in polymer. Glassy to rubber transition in polymer. Molecular weight and Molecular weight distribution. Concept of stoichiometry and Functionality.	8
<b>MODULE- II</b> Principles of Step-reaction (condensation) polymerization. Mechanism of	5

stepwise polymerization.Kinetics and statistics of linear stepwise polymerization. Polyfunctional step-reaction polymerization, Real Industrial processes.	
<b>MODULE- III</b> Principles of radical chain (addition) polymerization.Initiators and initiator systems.Kinetics of vinyl radical polymerization.Kinetics of copolymerization.Composition of copolymers.Mechanism of Copolymerization Mechanism and kinetics of ionic chain growth polymerization.	10
<b>Module-IV</b> Mechanism and kinetics of co-ordination polymerization.Mechanism and kinetics of ring opening polymerization. ATRP, Electrochemical Polymerization.	8
<b>MODULE– V</b> Polymerization techniques: Bulk, Suspension, Emulsion, Solution polymerization	9

**Text Books:**

1. Text book of polymer Science: Billimeyer F.W., 3rd Edn., Wiley Interscience, 1984
2. Principles of polymerization: G. Odian, 2nd Edn. Wiley Interscience New York, 1981
3. Polymer Chemistry, Sixth edition, Charles E. Carraher Jr. Marcel Dekker Inc, 2003.
4. Principles of Polymer Systems, Rodriguez, F, Taylor& Francis, 4th Edn., 1996.

**Reference books:**

## COURSE INFORMATION SHEET

<b>Course code:</b>	CL335
<b>Course title:</b>	Biomaterials
<b>Pre-requisite:</b>	PH113, CH101, CH102, CL213
<b>Co-requisite(s):</b>	The course is to be floated as Programme elective -II
<b>Credits:</b>	L: 03 T: 00 P: 00
<b>Class schedule per week:</b>	03
<b>Class:</b>	B. Tech
<b>Semester / Level:</b>	06/03
<b>Branch:</b>	Chemical Engineering (Plastics & Polymer)
<b>Name of Teacher:</b>	Prof. S. Goswami

### Course Objectives:

This course enables the students to:

1.	Remembering: To distinguish the various materials for biomedical application
2.	Understanding: to define biocompatibility of various materials and classify them according to their suitability for the specific biomedical application
3.	Analyzing : to distinguish the advantages and limitations of specific biomaterials for a specific biomedical application
4.	Applying: to identify the specific biomaterial to be used for a specific tissue or organ replacement
5.	Evaluating: to compare the durability, cost and properties of various biomaterials for specific use

### Course Outcomes:

After the completion of this course, students will be able to:

CO.335.1	Analyze : Justify the selection of a specific biomaterial for a specific biomedical application on the basis of specific characteristic features
CO.335.2	Apply: Explain the suitability of polymeric biomaterials over the others on the basis of experimental evidences
CO.335.3	Evaluate: Given a set of known polymers select the most suitable one for a specific biomedical application on the basis of biocompatibility cytotoxicity performance
CO.335.4	Remember: Different types of materials used in biomedical application, classify these and compare properties
CO.335.5	Understand: Biocompatibility, bio-absorbability and limitations of various materials for specific application

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>MODULE- I</b> Biomaterials-definition-classification-metal-ceramic-polymers, composites- Source, application, advantage and limitations	6
<b>MODULE II:</b> Metals and alloys-Stainless Steels, CO-based alloys, Ti and Ti based alloys and dental metals corrosion and remedy, Ceramics-Aluminum oxides, calcium phosphate, glass-Ceramics, carbon manufacturing and physical properties, deterioration of ceramics	10
<b>MODULE-III</b> Polymeric implant materials-polyamides, PE, PP, Polyacrylates, Structure, properties and application of biological materials-proteins, polysaccharides, Structure and property relation of Tissues-Mineralized tissues, collagen rich tissues and elastic tissues	8
<b>MODULE - IV</b> Soft tissue replacements-Skin implants-sutures, tissue adhesives, percutaneous devices, artificial skins, maxillofacial implants, ear and eye implants, vascular implants, heart and lung assist devices, artificial kidney dialysis membranes	8
<b>MODULE V</b> Hard tissue replacements-long bone repair-wires, pins, screws, fracture plates, tooth implants, joint replacement-knee and hip joint-materials of construction, limitations	8

### Text Books:

1. Biomaterials-An Introduction-J.B. Park & Roderic S. lakes, Springer Science and Business Media, LLC, New york, 1992
2. Plastic Materials, J. A. Brydson, ISBN-13: 978-0750641326, ISBN-10: 0750641320, Butterworth Heinemann, 7<sup>th</sup> Edition, Oxford

### Reference books:

1. Fundamentals of Polymer Science: Kumar Anil & Gupta R.K. Mc Graw Hill, 1998.
2. The Element of Polymer Science & Engineering: Rudin.
3. Introduction to Polymer Science 3<sup>rd</sup> edition, L.H. Sperling, John Wiley and Sons 2001.

### Gaps in the syllabus (to meet Industry/Profession requirements)

- Testing procedure of biocompatibility, tissue compatibility and cytotoxicity of biomaterials are not included in the syllabus

### POs met through Gaps in the Syllabus:

PO11, PO9, PO2

### Topics beyond syllabus/Advanced topics/Design

- Testing procedure of biocompatibility, tissue compatibility and cytotoxicity of biomaterials may be included in the syllabus

### POs met through Topics beyond syllabus/Advanced topics/Design

PO2, PO3 and PO4

## COURSE INFORMATION SHEET

<b>Course code:</b>	<b>CL336</b>
<b>Course title:</b>	<b>Rubber Product Technology</b>
<b>Pre-requisite Flow chart:</b>	
<b>Co- requisite(s):</b>	
<b>Credits:</b>	L: 03 T: 00 P: 00
<b>Class schedule per week:</b>	<b>03</b>
<b>Class:</b>	<b>B. Tech</b>
<b>Semester / Level:</b>	<b>3<sup>rd</sup> year</b>
<b>Branch:</b>	<b>Chemical Engineering (Plastics &amp; Polymer)</b>
<b>Name of Teacher:</b>	

### Course Objectives

This course enables the students to:

1.	Understand the knowledge on industrially available elastomers synthesis and characteristics.
2.	Remember the use of chemical additives and will be able to select appropriate materials for a given application.
3.	Understand the elastomer processing operations and choice of operation depending on the material and final product requirements
4.	Analyze the select of vulcanizing agents and the process of vulcanization for various product profile
5.	Understand the elastomer based product manufacturing technology.

### Course Outcomes

After the completion of this course, students will be:

CO 336.1	Remember: Remembering the use of chemical additives, and will be able to select appropriate materials for a given application
CO 336.2	Understand: Understand the knowledge on industrially available elastomers synthesis and characteristics
CO 336.3	Apply: Apply most modern technology to modify the process variables on existing machine to manufacture a specific rubber/composite product.
CO336.4	Analyze: Analyze the select of vulcanizing agents and the process of vulcanization for various product profile
CO 336.5	Evaluate: Able to develop elastomer product with defined structural properties

## Syllabus

MODULE	No. of Lecture Hours
<b>Module1</b> History and growth of rubber technology, general consideration of diene polymers, Physics of raw vulcanised rubber, Natural rubber, Chemistry and technology of synthetic rubbers - SBR, nitrile, polybutadiene, polychloroprene, EVA, EPDM, Butyl rubber, silicones, TPEs.	8
<b>Module2</b> Rubber compounding and mixing, Mastication, Additives - fillers, accelerators, activators, antioxidants, antiozonants, sulphur etc. Mechanism and practice of sulphur vulcanization and non-sulphur, vulcanization (peroxide, metal oxides and other special curing systems) Machineries: Two roll Mill, Mixers, Extruders, Calendars, Testing equipments: mooney viscometer, oscillating disc rheometer.	10
<b>Module3</b> Manufacturing of Dipped goods from latex, latex foam, Latex thread, latex treated coir. Rubber coated fabrics, Rubber footwear technology.	7
<b>Module4</b> Using textile, leather, PVC. Extruded rubber profile. Hose technology, conveyor & V- Belt., Rubber covered rolls, metal rubber bonding. Thermoplastic Elastomer & its potential application, reverse engineering in rubber industries.	7
<b>Module 5</b> Tyre technology: Classification, Compounding, processing, application, rubber cables description, Materials used-resin, reinforcement, Classification, Machinery, defects, remedies classification.	8

## COURSE INFORMATION SHEET

**Course code:** CL411  
**Course title:** Polymer Technology  
**Pre-requisite:** PH113, CH101, CH102, CL213  
**Co-requisite(s):** Programme Elective-III to BE Chemical Engineering students  
**Credits:** L: 03 T: 00 P: 00  
**Class schedule per week:** 03  
**Class:** B. Tech  
**Semester / Level:** 07/04  
**Branch:** Chemical Engineering  
**Name of Teacher:**

### Course Objectives:

This course enables the students to:

1.	Understanding: to explain the types and kinetics of synthesis reactions of various polymers
2.	Apply: to identify the compounding ingredients to be used in specific plastic compounding for specific end use
3.	Analyze: to make use of knowledge of structure /properties relationship of polymers while selecting them for specific product manufacturing
4.	Compose: to write down the recipe of a specific polymer compound suitable for specific application
5.	Understand the physical and chemical characterization of polymeric raw materials.

### Course Outcomes:

After the completion of this course, students will be able to:

CO.411.1	Remember: Recall the preparation, properties and application of various commodity and engineering plastics.
CO.411.2	Understand: Explain preparation, properties and application of commodity and engineering plastics.
CO.411.3	Apply: Apply the importance of structure property relationship to choose the materials for various applications.
CO.411.4	Analyze: Categorize the methods of the preparation, properties and application of specific copolymers.
CO.411.5	Evaluate: Select additives for different plastics and formulate recipe for specific product manufacturing

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>Module 1: Fundamental concept of Macromolecules</b> -Classification of polymer, Polymer structure property relationship, Molecular forces and chemical bonding in polymer, Glassy to rubber transition in polymer, Concept of Molecular weight and Molecular weight distribution for polymers, Determination of average molecular Weight by viscometry, Gel permeation Chromatography	6
<b>Module 2:Types of polymerization</b> - Principles of Step-reaction (condensation) polymerization, Carothers Equation, Mechanism of stepwise polymerization, Kinetics and statistics of linear stepwise polymerization, Polyfunctional step-reaction polymerization, Gel point, Principles of radical chain (addition) polymerization. Initiators and initiator systems, Kinetics of vinyl radical polymerization, initiator efficiency, cage effect	10
<b>Module 3:</b> AdditivesforPlastics:Definition,classification,mechanismofaction:fillers, couplingagents, plasticizer, cross linkingagents, stabilizer, blowingagents	8
<b>Module 4:</b> Structure and property relation of Polyethylene,(LDPE, HDPE, LLDPE, XLPE, UHMHDEP), Polytetrafluoroethylene,Polypropylene, Polystyrene, Polyvinyl chloride,Polyvinyl alcohol, Acrylics, nylon 6,nylon66, Phenol-formaldehyde resins, alkyl & aryl epoxies, polyurethanes, silicones, Unsaturated Polyester	10
<b>Module 5:</b> Crystal structure of polymer, Morphology of crystalline polymer, Crystallization and melting, Strain induced morphology, Mechanical properties of crystalline polymer, Viscous flow, Kinetic theory of rubber elasticity. Viscoelasticity, melt flow Index, die swell, viscoelastic models, principles of cone and plate rheometer	6

## COURSE INFORMATION SHEET

<b>Course code:</b>	CL415
<b>Course title:</b>	Polymer Blends and Alloys
<b>Pre-requisite:</b>	PH113,CH101,CH102,CL213
<b>Co-requisite(s):</b>	The course is to be offered as Programme elective -III
<b>Credits:</b>	L: 03 T: 00 P: 00
<b>Class schedule per week:</b>	03
<b>Class:</b>	B. Tech
<b>Semester / Level:</b>	07/04
<b>Branch:</b>	Chemical engineering
<b>Name of Teacher:</b>	

### Course Objectives:

This course enables the students to:

1.	Remembering: Recall limitations of polymers, make a list of modification techniques and define blending of polymers
2.	Understanding: Classify blends and IPNs, illustrate types in practical use and summarise characterization methods of blends
3.	Evaluate :Compare the polymer blends with virgin polymers and alloys, Justify the blend composition in terms of properties
4.	Apply the concepts of most modern technology to modify the blend composition as per the requirements.
5.	Design projects related to development of novel products

### Course Outcomes:

After the completion of this course, students will be able to:

CO415.1	Remembering: Choose the specific polymer for blend preparation through specific method for specific end use
CO415.2	Analyze : Identify the defects in plastic products and interpret the product quality in terms of machine parameters and blend composition -suggest professional engineering solutions as remedies which will be sustainable and economical
CO415.3	Evaluate: Compare the blend properties with original raw polymer properties to show the improvement due to blending
CO415.4	Apply : Apply most modern technology to modify the blend composition by existing machine to manufacture a specific product
CO415.5	Create: optimize the blend ratio and compounding recipe, handle projects related to development of novel products

## SYLLABUS

MODULE	NO. OF LECTURE HOURS
<b>MODULE- I</b> Polymer Blends: Definition, difference between polymer blends and alloys, classification of polymer blends and alloys, principle of polymer compatibility, miscibility effect of molecular structure on polymer-polymer interaction, thermodynamics of polymer-polymer mixing	10
<b>MODULE II:</b> Preparation of Polymer Blends & Alloys (PBA): Latex, Solution, Melt, Mechanochemical blending, Reactive blending,	6
<b>MODULE-III</b> Commercial blends and applications - toughened polymers, LCP blends, high performance engineering polymer blend	8
<b>MODULE - IV</b> Interpenetrating Polymer Networks-type of blends and alloys-classification, preparation, Relation between blends, IPNs, graft copolymers and composites. Polymer concrete - fabrication, properties, applications	10
<b>MODULE V</b> Characterization of polymer blends- estimation of mechanical and thermal properties of blends Effect of composition of the blends on blend morphology	6

### Text Books:

1. Polymer Alloys and Blends: Thermodynamics and Rheology, Utracki, L.A. Hanser, 1990
2. Plastic Materials, J. A. Brydson, ISBN-13: 978-0750641326, ISBN-10: 0750641320, Butterworth Heinemann, 7<sup>th</sup> Edition, Oxford
3. Polymer Blends; Paul, D.R. and Newman S. Academic Press, 1998

### Reference books:

3. Polymer Blends and Alloys: Shaonaik, G.O. & Simon G.P. Marcel Dekker, 1999
4. Commercial Polymer Blends and Ionomers: Utracki, L.A., ACS, Symposium Series, 1988

### Gaps in the syllabus (to meet Industry/Profession requirements)

- Testing procedure of polymer blend properties are not included in the syllabus

### POs met through Gaps in the Syllabus:

PO11, PO9, PO2

### Topics beyond syllabus/Advanced topics/Design

- Testing procedure of polymer properties are not included in the syllabus

### POs met through Topics beyond syllabus/Advanced topics/Design

PO2, PO3 and PO4

## Course Outcome (CO) Attainment Assessment tools & Evaluation procedure

### Direct Assessment

Assessment Tool	% Contribution during CO Assessment
First Quiz	10
Mid Semester Examination	25
Second Quiz	10
Teacher's Assessment	5
End Semester Examination	50

### Indirect Assessment –

1. Student Feedback on Course Outcome

### Mapping of Course Outcomes onto Program Outcomes

Course Outcome	Program Outcomes (POs)												Program Specific Outcomes (PSOs)		
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
CO1	3	3	3	2	2	2	2	0	1	2	0	3	3	3	3
CO2	3	2	1	2	3	0	1	0	1	2	0	3	3	3	3
CO3	3	1	1	1	1	0	0	0	1	1	0	1	3	3	3
CO4	3	3	2	2	3	1	2	0	1	2	0	3	3	3	3
CO5	3	3	1	2	3	2	2	0	1	2	0	3	3	3	3

### Correlation Levels 1, 2 or 3 as defined below:

- 1: Slight (Low)    2: Moderate (Medium)    3: Substantial (High)

### Mapping Between COs and Course Delivery (CD) methods

CD Code	Course Delivery methods	Course Outcome	Course Delivery Method Used
CD1	Lecture by use of boards/LCD projectors/OHP projectors	CO1	CD1, CD2, CD8
CD2	Tutorials/Assignments	CO2	CD1, CD2, CD8
CD3	Seminars	CO3	CD1, CD2, CD8
CD4	Mini projects/Projects	CO4	CD1, CD2, CD8
CD5	Laboratory experiments/teaching aids	CO5	CD1, CD2, CD8
CD6	Industrial/guest lectures		
CD7	Industrial visits/in-plant training		
CD8	Self- learning such as use of NPTEL materials and internets		
CD9	Simulation		

## COURSE INFORMATION SHEET

<b>Course code:</b>	<b>CL422</b>
<b>Course title:</b>	<b>Polymer Composite</b>
<b>Pre-requisite(s):</b>	
<b>Co- requisite(s):</b>	<b>Nil</b>
<b>Credits:</b>	<b>L: 03 T: 00 P: 00</b>
<b>Class schedule per week:</b>	<b>03</b>
<b>Class:</b>	<b>B. Tech</b>
<b>Semester / Level:</b>	<b>04</b>
<b>Branch:</b>	<b>chemical engg/ Chemical Engineering- Plastics and Polymer</b>
<b>Name of Teacher:</b>	

### Course Objectives

This course enables the students to:

1.	Impart the fundamentals of polymer composites and its applications.
2.	Know about manufacture, properties and application of polymer and fibre.
3.	Explain the basic properties, characteristics and constituents of composite materials
4.	Present and apply the different fabrication processes for composite materials, including bonding, fastening, laminating, and finishing techniques
5.	Perform design, construction, and fabrication of laminate parts. Define and use appropriate terminology as it relates to composite structure design and manufacturing

### Course Outcomes

After the completion of this course, students will be able to:

CO 422.1	Remember: Classify the different type of polymeric composites and its applications.
CO 422.2	Understanding: Ability to select the process for fabrication of polymer composites.
CO 422.3	Applying: Select different types of matrix and reinforcement materials.
CO 422.4	Analysing: Relate theoretical knowledge with typical products and its stress – strain behavior.
CO 422.5	Evaluate: Aware of different testing and characterization of polymer composites.

## Syllabus

MODULE	No. of Lecture Hours
Module1 Polymer composite systems: Types of composites, reinforcements, Types of Resin..	8
Module2 Natural fibre: Jute, sisal, cotton, hemp ceramic fibre: silicon carbaide, zinc, Alumina, glass,synthetic fibre: polyethylene, polyester, nylon, Kevlar etc.	8
Module3 Thermoset, elastomer - resins (polyesters, epoxide, vinyl ester, phenol formaldehyde, polyimide, reinforced polyolefin, Semicrystalline and amorphous polymers - PEEK, PP, PEK, PBT, PC, ABC, nylon etc.) additives, reinforcements (particulate, fibrous, gaseous).	8
Module4 Processing techniques - open mould, hand lay up spray up, vacuum bag moulding, pressure bag moulding, autoclave moulding, closed mould, SMC, DMC, RTM., Continuous manufacturing process - pultrusion, filament winding, centrifugal casting. Application (sandwich constructions - aircraft, racing cars, helicopter rotor blades etc.)..	8
Module 5 Mechanical behaviour of composites – Analysis of continuous fibre composites, and shortfibre composites. Deformation behaviour of single ply and laminates. Creep, Fatigue Impact. Electrical,and thermal properties..	6

## COURSE INFORMATION SHEET

**Course code:** CL425  
**Course title:** Plastic Packaging Technology  
**Pre-requisite(s):**  
**Co- requisite(s):**  
**Credits:** L:03 T:00 P:00  
**Class schedule per week:** 03  
**Class:** B. Tech.  
**Semester / Level:**  
**Branch:** Chemical Engineering, Chemical Engineering-Plastics & Polymer  
**Name of Teacher:**

### Course Objectives

This course enables the students to:

1.	Study the basic concepts of packaging technology
2.	Understand marketing as an integral tool to packaging
3.	Recognize the importance of product-package interaction & its quality aspects in packaging
4.	Study the overall perspective of the packaging industry
5.	Apply and examine the knowledge of properties for selection of packaging materials

### Course Outcomes

After the completion of this course, students will be able to:

CO 425.1	Remember: Effectively observe and compare the different package forms
CO 425.2	Understand: Describe the importance of compatibility studies and their associated parameters.
CO 425.3	Apply: Select the suitable types of packaging material for a particular application(s).
CO 425.4	Analyze: Analyze the various hazards & environmental issues, aesthetics of a package and the differentiating factors.
CO 425.5	Evaluate: Able to judge the right kind packaging material with the help of quality parameter(s).

## Syllabus

MODULE	No. of Lecture Hours
<p><b>Module:1</b>            Definition of Packaging, Benefits of Packaging, Types of Packaging, Principles of Food Packaging, Climate Hazards on Packages, Functions of Packages. Protective Packaging – Principle, Materials used, Functions. Design Fundamentals- Need for Chances in Package Design, Features of Effective Design, Design Factors, Customer Appeal, Packaging Graphics, Package Colour.</p>	9
<p><b>Module:2</b>            Packaging in Metal cans - Raw materials, Coatings, film laminates and inks, Processing of food and drinks in metal packages, Shelf life of canned foods            Packaging in glass containers- Glass containers market sectors for foods and drinks, Attributes of food packaged in glass containers, Environmental profile            Paper and paperboard packaging- Paper and paperboard – fibre sources and fibre separation (pulping), Paper and paperboard manufacture, Properties of paper and paperboard, Package types, Environmental profile.</p>	8
<p><b>Module3</b>            Plastics in packaging - Use of plastics in food packaging, Types of plastic used in packaging – Polyethylene, Polypropylene (PP), Polyethylene terephthalate, Ethylene vinyl acetate (EVA), Polyamide (PA), Polyvinyl chloride (PVC), Polyvinylidene chloride (PVdC), Polystyrene (PS), Acrylonitrile butadiene styrene (ABS), Ethylene vinyl alcohol (EVOH) etc.</p>	7
<p><b>Module4</b>            Coating of plastic films – types and properties, Acrylic coatings, PVdC coatings, PVOH coatings, Low-temperature sealing coatings (LTSCs), Metallising with aluminium, Extrusion coating with PE, Printing and labelling, Novel MAP applications for fresh-prepared produce, Novel MAP gases, Food contact and barrier properties, Sealability and closure, Retort pouch..</p>	9
<p><b>Module 5</b>            Active and intelligent packaging, Active packaging techniques, Intelligent packaging techniques, Environmental and waste management issues with plastic packaging, Legislative issues, developing novel biodegradable materials, Modern packaging systems: Green plastics for food packaging, Recycling packaging materials.</p>	7
